Leon Krier

The Architecture of Community Leon Krier, 2009-05-08 Leon Krier is one of the best-known—and most provocative—architects and urban theoreticians in the world. Until now, however, his ideas have circulated mostly among a professional audience of architects, city planners, and academics. In *The Architecture of Community*, Krier has reconsidered and expanded writing from his 1998 book *Architecture: Choice or Fate*. Here he refines and updates his thinking on the making of sustainable, humane, and attractive villages, towns, and cities. The book includes drawings, diagrams, and photographs of his built works, which have not been widely seen until now. With three new chapters, *The Architecture of Community* provides a contemporary road map for designing or completing today's fragmented communities. Illustrated throughout with Krier's original drawings, *The Architecture of Community* explains his theories on classical and vernacular urbanism and architecture, while providing practical design guidelines for creating livable towns. The book contains descriptions and images of the author's built and unbuilt projects, including the Krier House and Tower in Seaside, Florida, as well as the town of Poundbury in England. Commissioned by the Prince of Wales in 1988, Krier's design for Poundbury in Dorset has become a reference model for ecological planning and building that can meet contemporary needs.

Conditional Design Anthony di Mari, 2014-11-17 Conditional design is the sequel to *Operative Design*. This book will further explore the operative in a more detailed, intentional, and perhaps functional manner. Spatially, the conditional is the result of the operative. It is not a blind result however. Both terms work together to satisfy a formal manipulation through a set of opportunities for elements such as connections and apertures.

Earth Architecture Ronald Rael, 2009 The ground we walk on and grow crops in also just happens to be the most widely used building material on the planet. Civilizations throughout time have used it to create stable warm low-impact structures. The world's first skyscrapers were built of mud brick. Paul Revere Chairman Mao and Ronald Reagan all lived in earth houses at various points in their lives and several of the buildings housing Donald Judd's priceless collection at the Chinati Foundation in Marfa Texas are made of mud brick. While the vast legacy of traditional and vernacular earthen construction has been widely discussed, little attention has been paid to the contemporary tradition of earth architecture. Author Ronald Rael founder of Eartharchitecture.org provides a history of building with earth in the modern era focusing particularly on projects constructed in the last few decades that use rammed earth mud brick compressed earth cob and several other interesting techniques. Earth Architecture presents a selection of more than 40 projects that exemplify new creative uses of the oldest building material on the planet.--BOOK JACKET.

Architecture's Theory Catherine Ingraham, 2023-04-18 A collection of illuminating essays exploring what theory makes of architecture and what architecture makes of theory in philosophical and materialized contexts. From poststructuralism and deconstruction to current theories of technology and nature, critical theory has long been closely aligned with architecture. In turn, architecture as a thinking profession materializes theory in the form of built work that always carries symbolic loads. In this collection of essays, Catherine Ingraham studies the complex connectivity between architecture's discipline and practice and theories of philosophy, art, literature, history, and politics. She argues that there can be no

architecture without theory. Whether considering architecture's relationship to biomodernity or exploring the ways in which contemporary artists and designers engage in figural play, Ingraham offers provocative interpretations that enhance our understanding of both critical theory and architectural practice today. Along the way, she engages with a wide range of contemporary theorists, including Giorgio Agamben, Judith Butler, Jacques Derrida, Graham Harman, and Timothy Morton, considering buildings around the world, including the Palace of Culture in Warsaw, the Viceroy's House complex in New Delhi, Mack Scogin and Merrill Elam's Wolfsburg Science Center project in Germany, and the Superdome in New Orleans. Approaching its subject matter from multiple angles, *Architecture's Theory* shows how architecture's theoretical and artifactual practices have a unique power to alter culture.

Writing About Architecture Alexandra Lange, 2012-02-29 Extraordinary architecture addresses so much more than mere practical considerations. It inspires and provokes while creating a seamless experience of the physical world for its users. It is the rare writer that can frame the discussion of a building in a way that allows the reader to see it with new eyes. *Writing About Architecture* is a handbook on writing effectively and critically about buildings and cities. Each chapter opens with a reprint of a significant essay written by a renowned architecture critic, followed by a close reading and discussion of the writer's strategies. Lange offers her own analysis using contemporary examples as well as a checklist of questions at the end of each chapter to help guide the writer. This important addition to the *Architecture Briefs* series is based on the author's design writing courses at New York University and the School of Visual Arts. Lange also writes a popular online column for *Design Observer* and has written for *Dwell*,

Metropolis, New York magazine, and The New York Times. Writing About Architecture includes analysis of critical writings by Ada Louise Huxtable, Lewis Mumford, Herbert Muschamp, Michael Sorkin, Charles Moore, Frederick Law Olmsted, and Jane Jacobs. Architects covered include Marcel Breuer, Diller Scofidio + Renfro, Field Operations, Norman Foster, Frank Gehry, Frederick Law Olmsted, SOM, Louis Sullivan, and Frank Lloyd Wright.

Source Book of American Architecture George Everard Kidder Smith, 1996
Scorched Earth is the first book to chronicle the effects of chemical warfare on the Vietnamese people and their environment, where, even today, more than 3 million people—including 500,000 children—are sick and dying from birth defects, cancer, and other illnesses that can be directly traced to Agent Orange/dioxin exposure. Weaving first-person accounts with original research, Vietnam War scholar Fred A. Wilcox examines long-term consequences for future generations, laying bare the ongoing monumental tragedy in Vietnam, and calls for the United States government to finally admit its role in chemical warfare in Vietnam. Wilcox also warns readers that unless we stop poisoning our air, food, and water supplies, the cancer epidemic in the United States and other countries will only worsen, and he urgently demands the chemical manufacturers of Agent Orange to compensate the victims of their greed and to stop using the Earth's rivers, lakes, and oceans as toxic waste dumps. Vietnam has chosen August 10—the day that the US began spraying Agent Orange on Vietnam—as Agent Orange Day, to commemorate all its citizens who were affected by the deadly chemical. Scorched Earth will be released upon the third anniversary of this day, in honor of all those whose families have suffered, and continue to suffer, from this tragedy.

Operative Design Anthony di Mari, 2013-07-01 The core idea for this book is

the use of operative verbs as tools for designing space. These operative verbs abstract the idea of spatial formation to its most basic terms, allowing for an objective approach to create the foundation for subjective spatial design. Examples of these verbs are expand, inflate, nest, wist, lift, embed, merge and many more. Together they form a visual dictionary decoding the syntax of spatial verbs. The verbs are illustrated with three-dimensional diagrams and pictures of designs which show the verbs 'in action'. This approach was devised, tested, and applied to architectural studio instruction by Anthony Di Mari and Nora Yoo while teaching at Harvard University's Career Discovery Program in Architecture in 2010. As instructors and as recent graduates, they saw a need for this kind of catalogue from both sides – as a reference manual applicable to design students in all stages of their studies, as well as a teaching tool for instructors to help students understand the strong spatial potential of abstract operations.

Architecture for the Books Michael J. Crosbie, 2003 This book takes a look at the architectural design of library. Forty nine libraries are targeted, and includes plans of each library.

Architecture Dana Cuff, 1992 Dana Cuff delves into the architect's everyday world in *Architecture* to uncover an intricate social art of design, resulting in a new portrait of the profession that sheds light on what it means to become an architect.

Architecture Unbound Joseph Giovannini, 2021-11-30 Examines the influence of twentieth-century avant-garde movements on the contemporary architectural landscape through the work of “disruptors” such as Frank Gehry, Rem Koolhaas, and Zaha Hadid. With an irregular format designed by celebrated graphic

designer Abbott Miller of Pentagram. In *Architecture Unbound*, noted architecture critic Joseph Giovannini proposes that our current architectural landscape ultimately emerged from transgressive and progressive art movements that had roiled Europe before and after World War I. By the 1960s, social unrest and cultural disruption opened the way for investigations into an inventive, antiauthoritarian architecture. Explorations emerged in the 1970s, and built projects surfaced in the 1980s, taking digital form in the 1990s, with large-scale projects finally landing on the far side of the millennium. *Architecture Unbound* traces all of these developments and influences, presenting an authoritative and illuminating history not only of the sources of contemporary currents in architecture but also of the twentieth-century avant-garde and the twenty-first-century digital revolution in form-making, and profiling the most influential practitioners and their most notable projects, including Frank Gehry's Guggenheim Bilbao and Walt Disney Concert Hall, Zaha Hadid's Guangzhou Opera House, Daniel Libeskind's master plan for the World Trade Center, Rem Koolhaas's CCTV Tower, and Herzog and de Meuron's Bird's Nest Olympic Stadium in Beijing.

Architecture , 1908

Toward A Minor Architecture Jill Stoner, 2012-03-09 A major proposal for a minor architecture, and for the making of spaces out of the already built. Architecture can no longer limit itself to the art of making buildings; it must also invent the politics of taking them apart. This is Jill Stoner's premise for a minor architecture. Her architect's eye tracks differently from

most, drawn not to the lauded and iconic but to what she calls “the landscape of our constructed mistakes”—metropolitan hinterlands rife with failed and foreclosed developments, undersubscribed office parks, chain hotels, and abandoned malls. These graveyards of capital, Stoner asserts, may be stripped of their excess and become sites of strategic spatial operations. But first we must dissect and dismantle prevalent architectural mythologies that brought them into being—western obsessions with interiority, with the autonomy of the building-object, with the architect's mantle of celebrity, and with the idea of nature as that which is “other” than the built metropolis. These four myths form the warp of the book. Drawing on the literary theory of Gilles Deleuze and Félix Guattari, Stoner suggests that minor architectures, like minor literatures, emerge from the bottoms of power structures and within the language of those structures. Yet they too are the result of powerful and instrumental forces. Provoked by collective desires, directed by the instability of time, and celebrating contingency, minor architectures may be mobilized within buildings that are oversaturated, underutilized, or perceived as obsolete. Stoner's provocative challenge to current discourse veers away from design, through a diverse landscape of cultural theory, contemporary fiction, and environmental ethics. Hers is an optimistic and inclusive approach to a more politicized practice of architecture.

Building Evolutionary Architectures Neal Ford, Rebecca Parsons, Patrick Kua, 2017-09-18 The software development ecosystem is constantly changing, providing a constant stream of new tools, frameworks, techniques, and paradigms. Over the past few years, incremental developments in core

engineering practices for software development have created the foundations for rethinking how architecture changes over time, along with ways to protect important architectural characteristics as it evolves. This practical guide ties those parts together with a new way to think about architecture and time.

The State of Architecture at the Beginning of the 21st Century Bernard Tschumi, Irene Cheng, 2003 In 2003, Bernard Tschumi convened forty of the world's leading architectural designers and theorists for a conference at Columbia University. *The State of Architecture* brings together manifestos, musings, and meditations to capture the key polemics raised by this extraordinary convocation of thinkers.
