**Functional Programming Languages and Computer Architecture** John Hughes,1991-08-07 This book offers a comprehensive view of the best and the latest work in functional programming. It is the proceedings of a major international conference and contains 30 papers selected from 126 submitted. A number of themes emerge. One is a growing interest in types: powerful type systems or type checkers supporting overloading, coercion, dynamic types, and incremental inference; linear types to optimize storage, and polymorphic types to optimize semantic analysis. The hot topic of partial evaluation is well represented: techniques for higher-order binding-time analysis, assuring termination of partial evaluation, and improving the residual programs a partial evaluator generates. The thorny problem of manipulating state in functional languages is addressed: one paper even argues that parallel programs with side-effects can be more declarative than purely functional ones. Theoretical work covers a new model of types based on projections, parametricity, a connection between strictness analysis and logic, and a discussion of efficient implementations of the lambda-calculus. The connection with computer architecture and a variety of other topics are also addressed.

*Architecture in the Digital Age* Branko Kolarevic,2004-03 Architecture in the Digital Age addresses contemporary architectural practice in which digital technologies are radically changing how buildings are conceived, designed and produced. It discusses the digitally-driven changes, their origins, and their effects by grounding them in actual practices already taking place, while simultaneously speculating about their wider implications for the future. The book offers a diverse set of ideas as to what is relevant today and what will be relevant tomorrow for emerging architectural practices of the digital age.

**Head-Driven Phrase Structure Grammar** Carl Pollard,Ivan A. Sag,1994-08-15 This book presents the most complete exposition of the theory of head-driven phrase structure grammar (HPSG), introduced in the authors' Information-Based Syntax and Semantics. HPSG provides an integration of key ideas from the various disciplines of cognitive science, drawing on results from diverse approaches to syntactic theory, situation semantics, data type theory, and knowledge representation. The result is a conception of grammar as a set of declarative and order-independent constraints, a conception well suited to modelling human language processing. This self-contained volume demonstrates the applicability of the HPSG approach to a wide range of empirical problems, including a number which have occupied center-stage within syntactic theory for well over twenty years: the control of understood subjects, long-distance dependencies conventionally treated in terms of wh-movement, and syntactic constraints on the relationship between various kinds of pronouns and their antecedents. The authors make clear how their approach compares with and improves upon approaches undertaken in other frameworks, including in particular the government-binding theory of Noam Chomsky.

**Retailising Space** Mattias Kärrholm,2012 Over the past few years there has been a proliferation of new kinds of retail space, such as in libraries, workplaces, churches and museums. This book describes how the retailisation of public domains affects our everyday life and our use of the built environment. Taking an architectural and territorial perspective on this issue, it looks at how retail and consumption spaces have changed and territorialised urban life in different ways. It then develops a methodology and a set of concepts to describe and understand the role of architecture in these territorial transformations.

*Sport and Architecture* Benjamin S. Flowers,2017-05-08 Sport and architecture are two elements of contemporary life that have a broad and profound impact on the world around us. The role architecture plays in shaping buildings and societies has occupied historians for centuries. Likewise, the cultural, economic, and political importance of sport is the subject of sustained academic inquiry. When sport and architecture converge, as in the 2012 London Olympics or the 2014 World Cup in Brazil, then the impact of these two forms of social activity is redoubled. This book presents a new and dynamic study of the complex relationship between sport and architecture. It explores the history of sport architecture and examines the buildings and events that create sites where sport and architecture converge in particularly telling ways. Its chapters discuss the following topics: sport architecture and urban redevelopment sport architecture and technology sport architecture and nationalism sport architecture as social activism sport architecture and global capitalism. By considering the importance of architectural form alongside these key themes, this book represents a landmark study for anybody interested in the social and cultural significance of architecture or sport.

Essays of Multiple Sorts ~ ~Two~ ~ Bruce Howard Hamilton,2012-03 Essays of Multiple Sorts ~ ~Two~ ~ involves an attempt to improve older texts by a process of editing. The individual pieces are decidedly outside of what generally might be considered verse formats. Some of the offerings might seem wonderfully brief, whereas at least several might seem decidedly toward verbose. Though apparently likely to fail rather badly, the author tried to accomplish some valid orchestrations of English.
