The Self-Assembling Brain Peter Robin Hiesinger, 2022-12-13 In this book, Peter Robin Hiesinger explores historical and contemporary attempts to understand the information needed to make biological and artificial neural networks. Developmental neurobiologists and computer scientists with an interest in artificial intelligence - driven by the promise and resources of biomedical research on the one hand, and by the promise and advances of computer technology on the other - are trying to understand the fundamental principles that guide the generation of an intelligent system. Yet, though researchers in these disciplines share a common interest, their perspectives and approaches are often quite different. The book makes the case that the information problem underlies both fields, driving the questions that are driving forward the frontiers, and aims to encourage cross-disciplinary communication and understanding, to help both fields make progress. The questions that challenge researchers in these fields include the following. How does genetic information unfold during the years-long process of human brain development, and can this be a short-cut to create human-level artificial intelligence? Is the biological brain just messy hardware that can be improved upon by running learning algorithms in computers? Can artificial intelligence bypass evolutionary programming of grown networks? These questions are tightly linked, and answering them requires an understanding of how information unfolds algorithmically to generate functional neural networks. Via a series of closely linked discussions (fictional dialogues between researchers in different disciplines) and pedagogical seminars, the author explores the different challenges facing researchers working on neural networks, their different perspectives and approaches, as well as the common ground and understanding to be found amongst those sharing an interest in the development of biological brains and artificial intelligent systems--

Assembling the Dinosaur Lukas Rieppel, 2019-06-24 A lively account of the dinosaur's role in Gilded Age America, examining the connection between business, paleontology, and museums. Although dinosaur fossils were first found in England, a series of dramatic discoveries during the late 1800s turned North America into a world center for vertebrate paleontology. At the same time, the United States emerged as the world's largest industrial economy, and creatures like Tyrannosaurus, Brontosaurus, and Triceratops became emblems of American capitalism. Large, fierce, and spectacular, American dinosaurs dominated the popular imagination, making front-page headlines and appearing in feature films. *Assembling the Dinosaur* follows dinosaur fossils from the field to the museum and into the commercial culture of North America's Gilded Age. Business tycoons like Andrew Carnegie and J. P. Morgan made common cause with vertebrate paleontologists to capitalize on the widespread appeal of dinosaurs, using them to project American exceptionalism back into prehistory. Learning from the show-stopping techniques of P. T. Barnum, museums exhibited dinosaurs to attract, entertain, and educate the public. By assembling the skeletons of dinosaurs into eye-catching displays, wealthy industrialists sought to cement their own reputations as generous benefactors of science, showing that modern capitalism could produce public goods in addition to profits. Behind the scenes, museums adopted corporate management practices to control the movement of dinosaur bones, restricting their circulation to influence their meaning and value in popular culture. Tracing the entwined relationship of dinosaurs, capitalism, and culture during the Gilded Age, Lukas Rieppel reveals the outsized role these giant reptiles played during one of the most consequential periods in American history. Praise for *Assembling the Dinosaur* "A penetrating study of legitimacy and capitalism in the realm of fossils." —Verlyn Klinkenborg, *The New York Review of Books* "A solid entry into the growing body of literature on Gilded Age American paleontology, but it is particularly valuable for its contribution to enhancing our understanding of how science and its representation during that period were influenced by, and in turn affected, society as a whole. By incorporating cultural, economic, and scientific developments, Rieppel shines new light on the history of both American paleontology and museum exhibition practice." —Ilja Nieuwland, *Science*

Self-assembling Biomaterials Helena S. Azevedo,Ricardo M. P. da Silva,2018-04-17 Self-assembling biomaterials: molecular design, characterization and application in biology and medicine provides a comprehensive coverage on an emerging area of biomaterials science, spanning from conceptual designs to advanced characterization tools and applications of self-assembling biomaterials, and compiling the recent developments in the field. Molecular self-assembly, the autonomous organization of molecules, is ubiquitous in living organisms and intrinsic to biological structures and function. Not surprisingly, the exciting field of engineering artificial self-assembling biomaterials often finds inspiration in Biology. More important, materials that self-assemble speak the language of life and can be designed to seamlessly integrate with the biological environment, offering unique engineering opportunities in bionanotechnology. The book is divided in five parts, comprising design of molecular building blocks for self-assembly; exclusive features of self-assembling biomaterials; specific methods and techniques to predict, investigate and characterize self-assembly and formed assemblies; different approaches for controlling self-assembly across multiple length scales and the nano/micro/macroscale properties of biomaterials; diverse range of applications in biomedicine, including drug delivery, theranostics, cell culture and tissue regeneration. Written by researchers working in self-assembling biomaterials, it addresses a specific need within the Biomaterials scientific community. Explores both theoretical and practical aspects of self-assembly in biomaterials Includes a dedicated section on characterization techniques, specific for self-assembling biomaterials Examines the use of dynamic self-assembling biomaterials

Assembling Arguments Jonathan Buehl,2016-01-20 Scientific arguments—and indeed arguments in most disciplines—depend on visuals and other nontextual elements; however, most models of argumentation typically neglect these important resources. In *Assembling Arguments*, Jonathan Buehl offers a concentrated study of scientific argumentation that is sensitive to both the historical and theoretical possibilities of multimodal persuasion as it advances two related claims. First, rhetorical theory—when augmented with methods for reading nonverbal representations—can provide the analytical tools needed to understand and appreciate multimodal scientific arguments. Second, science—an inherently multimodal enterprise—offers ideal subjects for developing general theories of multimodal rhetoric applicable across fields. In developing these claims, Buehl offers a comprehensive account of scientific persuasion as a multimodal process and develops a simple but productive framework for analyzing and teaching multimodal argumentation. Comprising five case studies, the book provides detailed treatments of argumentation in specific technological and historical contexts: argumentation before World War I, when images circulated by hand and by post; argumentation during the mid-twentieth century, when computers were beginning to bolster scientific inquiry but images remained hand-crafted products; and argumentation at the turn of the twenty-first century—an era of digital revolutions and digital fraud. Each study examines the rhetorical problems and strategies of specific scientists to investigate key issues regarding visualization and argument: 1) establishing new instruments as reliable sources of visual evidence; 2) creating novel arguments from reliable visual evidence; 3) creating novel arguments with unreliable visual evidence; 4) preserving the credibility of visualization practices; and 5) creating multimodal artifacts before and in the era of digital circulation. Given the growing enterprise of rhetorical studies and the field's contributions to communication practices in all disciplines, rhetoricians need a comprehensive rhetoric of science—one that accounts for the multimodal arguments that change our relation to reality. *Assembling Arguments* argues that such rhetoric should enable the interpretation of visual scientific arguments and improve science-writing instruction.

Assembling Women Teri L. Caraway, 2007 Despite the massive influx of women into the labor force as a result of globalization, the gender inequalities at work have remained largely unchanged. This book addresses two related questions: What has prompted the feminization of manufacturing work in developing countries, and why has it failed to significantly erode gender inequalities at work? Teri L. Caraway offers case studies and in-depth analysis of employment changes in Indonesia combined with cross-national data to show that the feminization of the workplace produced by industrialization policies has reconfigured and reproduced, rather than overturned, gender divisions of labor at work. Caraway challenges the conventional wisdom that export-oriented industrialization and women's cheap labor are the driving forces behind feminization. Instead, she argues, the answers can be found in weak unions and current social practice. Caraway employs information about a wide range of industries--capital-intensive, male-dominated, non-export firms as well as female-dominated, labor-intensive, export-oriented industries--in arriving at her conclusions. Her findings will prove discouraging to anyone who hopes that globalization has become a positive force in improving the lives of women workers. Caraway's multilevel methodology for analyzing changes in gendered patterns of employment and her introduction of gendered discourses of work as a major explanatory variable will make *Assembling Women* a valuable resource for women's studies scholars, development economists, political scientists, and sociologists as well as all with an interest in Southeast Asian Studies and labor and industrial relations.

Assembling Exclusive Expertise Anna Leander, Ole Wæver, 2018-07-06 This book looks at the worlding of the Global South in the process of assembling conflict resolution expertise. Anna Leander, Ole Wæver and their contributors pursue this ambition by following the experts, institutions, databases and creative expressions that are assembled into conflict resolution expertise in the Global South. Expertise shapes how conflicts in the Global South are understood and consequently dealt with. Yet, expertise is always and necessarily exclusive. The exclusivity of expertise refers both to the fashionable, the sophisticated and what counts, and also to the exclusion of some people or views. Assembled from a wealth of competing knowledges expertise is always both knowledgeable and ignorant. The ambition of the volume is to explore how this exclusive expertise is assembled and in what ways it is therefore knowledgeable and ignorant of knowledges in/of the Global South. This work will be of significant interest to advanced students and scholars of conflict resolution, peace research, mediation and international relations and scholars of expertise.

Assembling Culture Tony Bennett, Chris Healy, 2013-10-31 If the social does not exist as a special domain but, in Bruno Latour's words, as 'a peculiar movement of re-association and reassembling', what implications does this have for how 'the cultural' might best be conceived? What new ways of thinking the relations between culture, the economy and the social might be developed by pursuing such lines of inquiry? And what are the implications for the relations between culture and politics? Contributors draw on a range of theoretical perspectives, including those associated with Deleuze and Guattari, Foucault, Law and Haraway, in order to focus on the roles of different forms of expertise and knowledge in producing cultural assemblages. What expertise is necessary to produce indigenous citizens? How does craniometry assemble the head? What kinds of knowledge were required to create markets for life insurance? These and other questions are pursued in this collection through a challenging array of papers concerned with cultural assemblages as diverse as brands and populations, bottled water and mobile television.

Assembling Consumption Robin Canniford, Domen Bajde, 2015-09-16 *Assembling Consumption* marks a definitive step in the institutionalisation of qualitative business research. By gathering leading scholars and educators who study markets, marketing and consumption through the lenses of philosophy, sociology and anthropology, this book clarifies and applies the investigative tools offered by assemblage theory, actor-network theory and

non-representational theory. Clear theoretical explanation and methodological innovation, alongside empirical applications of these emerging frameworks will offer readers new and refreshing perspectives on consumer culture and market societies. This is an essential reading for both seasoned scholars and advanced students of markets, economies and social forms of consumption.

Assembling Çatalhöyük Ian Hodder, Arkadiusz Marciniak, 2017-12-02 Assembling Çatalhöyük, like archaeological remains, can be read in a number of ways. At one level the volume reports on the exciting new discoveries and advances that are being made in the understanding of the 9000 year-old Neolithic site of Çatalhöyük. The site has long been central to debates about early village societies and the formation of mega-sites in the Middle East. The current long-term project has made many advances in our understanding of the site that impact our wider understanding of the Neolithic and its spread into Europe from the Middle East. These advances concern use of the environment, climate change, subsistence practices, social and economic organization, the role of religion, ritual and symbolism. At another level, the volume reports on methodological advances that have been made by team members, including the development of reflexive methods, paperless recording on site, the integrated use of 3D visualization, and interactive archives. The long-term nature of the project allows these various innovations to be evaluated and critiqued. In particular, the volume includes analyses of the social networks that underpin the assembling of data, and documents the complex ways in which arguments are built within quickly transforming alliances and allegiances within the team. In particular, the volume explores how close inter-disciplinarity, and the assembling of different forms of data from different sub-disciplines, allow the weaving together of information into robust, distributed arguments.

Assembling Past Worlds Oliver J.T. Harris, 2021-06-08 *Assembling Past Worlds* draws on new materialism and the philosophy of Gilles Deleuze to explore the potential for a posthumanist archaeology. Through specific empirical study, this book provides a detailed analysis of Neolithic Britain, a critical moment in the emergence of new ways of living, as well as new relationships between materials, people and new forms of architecture. It achieves two things. First, it identifies the major challenges that archaeology faces in the light of current theoretical shifts. New ideas place new demands on how we write and think about the past, sometimes in ways that can seem contradictory. This volume identifies seven major challenges that have emerged and sets out why they matter, why archaeology needs to engage with them and how they can be dealt with through an innovative theoretical approach. Second, it explores how this approach meets these challenges through an in-depth study of Neolithic Britain. It provides an insightful diagnosis of the issues posed by current archaeological thought and is the first volume to apply the philosophy of Gilles Deleuze to the extended analysis of a single period. *Assembling Past Worlds* shows how new approaches are transforming our understandings of past worlds and, in so doing, how we can meet the challenges facing archaeology today. It will be of interest to both students and researchers in archaeological theory and the Neolithic of Europe.

Assembling Comparison Steven Lewis, Rebecca Spratt, 2024-01-30 This book combines assemblage theory and policy mobilities to inform the study of comparative and international education (CIE), focusing on education policy and how such policy moves are enacted. These approaches challenge taken-for granted and universalizing concepts in policy research and policy work in CIE – such as the nation-state, policy making/policy enactment, global/local, Global North/Global South – and highlight how policy is contingent on emerging through complex relations between people and places. Using illustrative cases drawn from research and practice in CIE and education development, the book demonstrates how these ideas can be used in the analysis of policy and the application of this approach in real life.

Assembling California John McPhee, 1994-02 Drawing on his travels along the fault lines of the earth's shifting plates, the author discusses how a half dozen large pieces of country have drifted from far and near to coalesce as California.

Assembling California John McPhee,2010-04-01 At various times in a span of fifteen years, John McPhee made geological field surveys in the company of Eldridge Moores, a tectonicist at the University of California at Davis. The result of these trips is *Assembling California*, a cross-section in human and geologic time, from Donner Pass in the Sierra Nevada through the golden foothills of the Mother Lode and across the Great Central Valley to the wine country of the Coast Ranges, the rock of San Francisco, and the San Andreas family of faults. The two disparate time scales occasionally intersect—in the gold disruptions of the nineteenth century no less than in the earthquakes of the twentieth—and always with relevance to a newly understood geologic history in which half a dozen large and separate pieces of country are seen to have drifted in from far and near to coalesce as California. McPhee and Moores also journeyed to remote mountains of Arizona and to Cyprus and northern Greece, where rock of the deep-ocean floor has been transported into continental settings, as it has in California. Global in scope and a delight to read, *Assembling California* is a sweeping narrative of maps in motion, of evolving and dissolving lands.

Self-Assembling Peptide Systems in Biology, Medicine and Engineering A. Aggeli,N. Boden,Shuguang Zhang,2001-08-31 This is the first ever text on the intrinsic self-assembling behaviour of peptides and the implications of these properties for a broad range of applications. These include protein conformational diseases, the engineering of nanostructured biodegradable and biocompatible polymeric materials with potential applications in tissue engineering, biomedical devices, industrial fluids and personal care products. This new area of endeavour is outlined in a series of 25 articles summarising lectures presented at the first ever meeting on this topic held in Crete in July 1999. Audience: The articles address generic issues making the text readily amenable to postgraduate students, academics, and research scientists interested in new challenges at the physical sciences - life sciences interface.
