**William Shakespeare Complete Works Second Edition** William Shakespeare, 2022-05-03

The newly revised, wonderfully authoritative First Folio of William Shakespeare's Complete Works, edited by acclaimed Shakespearean scholars and endorsed by the world-famous Royal Shakespeare Company Skillfully assembled by Shakespeare's fellow actors in 1623, the First Folio was the original Complete Works—arguably the most important literary work in the English language. But starting with Nicholas Rowe in 1709 and continuing to the present day, Shakespeare editors have mixed Folio and Quarto texts, gradually corrupting the original Complete Works with errors and conflated textual variations. The second edition of the Complete Works features annotations and commentary from Jonathan Bate and Eric Rasmussen—two of today's preeminent Shakespeare scholars—as well as cutting-edge textual design, on-page glossaries for contemporary readers, stage directions from RSC directors, a sixteen-page insert of photographs from RSC production shorts, a timeline of the plays and poems, and family trees for the Histories. Combining innovative scholarship with brilliant commentary and textual analysis that emphasizes performance history and values, this landmark edition is indispensable to students, theater professionals, and general readers alike.

Evaluation and comparison of Ajax Frameworks regarding applicability, productivity and technical limitations Lukas Ostermaier, 2008-03-11 Inhaltsangabe: Abstract: For some years the Internet has been dominated by phrases like Web 2.0 and Ajax. The catchword Web 2.0, which was originally established by O Reilly at the first Web 2.0 conference in October 2004, not only describes

a new way of perception and usage of the internet (e.g. social software like blogs, wikis, etc.), but also stands for more or less innovative techniques as for instance RSS or Ajax. The latter is a combination of techniques that have been available since the late 1990s, such as JavaScript, asynchronous requests and XML. However, the term Ajax only exists since Jesse James Garret introduced it in his article in February 2005. Since then Ajax has experienced a real hype. Google Mail, Google Maps or Flickr just serve as examples for the mass of applications that have to attribute their success substantially to Ajax. When it comes to web application development there has also been a lot of progress in the field of Ajax: Ajax frameworks of all kinds massively gained popularity and flooded the development community. From the biggest companies through to small development teams, almost everyone has published his own Ajax framework or library in the last two years. In the meantime there are far more than 150 different frameworks for various programming languages and diverse aims. Because of this uncontrolled growth of frameworks it is quite difficult to say which of those is most suitable for a specific project. There are two key questions that have to be considered in case of Ajax or Rich Internet Applications (RIAs) in general: How can Ajax significantly increase the business value of an application and how can it be applied productively? This thesis mainly focuses on the latter question by evaluating three Ajax frameworks of large companies with a strong background by means of an example application with respect to commercial applicability, productivity, performance as well as enhancement and adaptation possibilities. Furthermore this work discusses the technical limitations and problems of Ajax and provides an outlook on future developments in this area. As example application for the evaluation a web-based tracking system for public transportation is implemented. Each single vehicle is visualized on a street map according to its current position. By the implementation of this application with each of the three chosen Ajax

frameworks their applicability, productivity and performance is illustrated as well as [...]
