Automated Teller Machine Network Market Structure and Cash Usage Heli Snellman,Suomen Pankki,2006 This study discusses the effects of the Automated Teller Machine (ATM) network market structure on the availability of cash withdrawal ATM services and cash usage. The aim and novelty of the study is to construct the ATM equation. The study also contributes to the earlier discussion on the effects of ATMs on cash usage. The monopolisation of ATM network market structure and its effects on the number of ATMs and on cash in circulation are analysed both theoretically and empirically. The unique annual data set on 20 countries used in the estimations has been combined from various data sources. The observation period is 1988-2003, but the data on some countries are available only for a shorter period. Based on our theoretical discussion, as well as the estimation results, monopolisation of the ATM network market structure is associated with a smaller number of ATMs. Furthermore, the influence of the number of ATMs on cash in circulation is ambiguous.

Cash and Dash Bernardo Bátiz-Lazo,2018-06-28 Cash and Dash: How ATMs and Computers Changed Banking uses the invention and development of the automated teller machine (ATM) to explain the birth and evolution of digital banking, from the 1960s to present day. It tackles head on the drivers of long-term innovation in retail banking with emphasis on the payment system. Using a novel approach to better understanding the industrial organization of financial markets, Cash and Dash contributes to a broader discussion around innovation and labour-saving devices. It explores attitudes to the patent system, formation of standards, organizational politics, the interaction between regulation and strategy, trust and domestication, maintenance versus disruption, and the huge undertakings needed to develop online real-time banking to customers.

Regulating Communication Technology William B. Trautman,Rand Corporation,1989 This research establishes a framework for analyzing the regulation of evolving communication technologies with a case study of automated teller machines (ATMs). The high fixed cost of communication technology may provide a basis for regulatory intervention, because it may enable large firms to gain a competitive advantage over small firms; it may also lead to efficiency. The regulatory issue is whether laws should be enacted that give competing firms access to existing technology, thus protecting the market share of small firms and enabling them to compete more equitably with large firms. Mandatory-access laws can impose a cost on society, however, by slowing the diffusion of technology and postponing the benefits associated with new communication services. This research provides empirical evidence that communication services are differentiated to a varying degree by location, suggesting that product differentiation may be relevant to regulation of mandatory access. The study presents a logistics model of ATM adoption by commercial banks. The model shows that the degree to which banks are differentiated on the dimension of location is an important determinant of ATM adoption, and that characterizations of competition that do not incorporate a measure of differentiation are not as good at predicting ATM adoption.
