*The Demotic Graffiti from the Temple of Isis on Philae Island*

Eugene Cruz-Urbe, 2016-01-15 This volume publishes 534 new Demotic graffiti recorded at the temple of Isis on Philae Island, presented with drawings and photographs. New editions of 101 of the graffiti that were published by F. Griffith in his Catalogue of the Demotic Papyri in the Dodecaschoenus (1937) are published here. These reedited texts were mainly chosen because new drawings provided significant new readings from those made by Griffith, or they helped elucidate the scope and meaning of some of the new graffiti by placement. The volume also includes an essay interpreting the role of the graffiti in understanding the political and religious activities at Philae temple during the last centuries of worship of the goddess Isis, mainly by Nubian priests and pilgrims.

It provides meteorological information to the maritime community, and contains a comprehensive chronicle on marine weather. It recognizes ships officers for their efforts as voluntary weather observers, and allows NWS to maintain contact with and communicate with over 10,000 shipboard observers (ships officers) in the merchant marine, NOAA Corps, Coast Guard, Navy, etc.

Unsteady Viscous Flows Demetri P. Telionis,2012-12-06 Most of the fundamental concepts of unsteady viscous flows have been known since the early part of the century. However, the past decade has seen an unprecedented number of publications in this area. In this monograph I try to connect materials of earlier contributions and synthesize them into a comprehensive entity. One of the main purposes of a monograph, in my opinion, is to fit together in a comprehensive way scattered contributions that provide fragmented information to the readers. The collection of such contributions should be presented in a unified way; continuity of thought and logical sequence of the presentation of ideas and methods are essential. The reader should be able to follow through without having to resort to other references, something that is unavoidable in the case of a research paper or even a review paper. Many of the solutions discussed in the literature address specific practical problems. In fact, in the process of collecting information, I discovered independent lines of investigations, dealing with the same physical problem, but inspired by different practical applications. For example, I found that two groups of investigators have been studying independently the response of a viscous layer to a harmonic external disturbance. One group is concerned with mass transport and the transport of sediment over the bottom of the ocean, and the other is interested in the aerodynamics of lifting surfaces in harmonically changing environments.

*NASA Formal Methods* Aaron Dutle, Mariano M. Moscato, Laura Titolo, César A. Muñoz, Ivan Perez, 2021-05-19 This book constitutes the proceedings of the 13th International Symposium on NASA Formal Methods, NFM 2021, held virtually in May 2021. The 21 full and 3 short papers presented in this volume were carefully reviewed and selected from 66 submissions. The papers aim to identify challenges and provide solutions to achieve assurance in mission-critical and safety-critical systems. Examples of such systems include advanced separation assurance algorithms for aircraft, next-generation air transportation, autonomous rendezvous and docking of spacecraft, on-board software for unmanned aerial systems (UAS), UAS traffic management, autonomous robots, and systems for fault detection, diagnosis, and prognostics.

Foundational Essays on Topological Manifolds, Smoothings, and Triangulations Robion C. Kirby, Laurence C. Siebenmann, 1977-05-21 Since Poincaré's time, topologists have been most concerned with three species of manifold. The most primitive of these--the TOP manifolds--remained rather mysterious until 1968, when Kirby discovered his now famous torus unfurling device. A period of rapid progress with TOP manifolds ensued, including, in 1969, Siebenmann's refutation of the Hauptvermutung and the Triangulation Conjecture. Here is the first connected account of Kirby's and Siebenmann's basic research in this area. The five sections of this book are introduced by three articles by the authors that initially appeared between 1968 and 1970. Appendices provide a full

discussion of the classification of homotopy tori, including Casson's unpublished work and a consideration of periodicity in topological surgery.

**Fixed Point Theory and Applications** Yeol Je Cho, Jong Kyu Kim, Shin Min Kang, 2002 The aim of this volume is to introduce recent new topics in the areas of fixed point theory, variational inequality and complementarity problem theory, non-linear ergodic theory difference, differential and integral equations, control and optimisation theory, dynamic system theory, inequality theory, stochastic analysis and probability theory, and their applications.

*The Hypocephalus: An Ancient Egyptian Funerary Amulet* Tamás Mekis, 2020-02-29 The hypocephalus is an element of Late Period and Ptolemaic funerary equipment—an amuletic disc placed under the head of mummies. Its shape emulates the sun's disc, and its

form is planar (although it is occasionally concave). This volume analyses the written records and iconography of these objects.

Inhibition of Memory Formation M. Gibbs,2012-12-06 All animals show longlasting changes in behaviour as a result of individual experience and this adaptability is one of their most striking features. The changes may be abrupt, radical and permanent. In higher animals it seems reasonable to ascribe their ability to change behaviour to the same physiological process that underlies human behavioural change and memory. The known physiology of the brain gives no clues as to the mechanism. On the contrary, physiological research on the nervous system has relied upon the fact that the reactions of nerve cells studied were stereotyped and could be repeated frequently without modification. Only recently has the deliberate search for modifiable nerve cells begun but nothing yet discovered shows the rapidity, certainty and permanence of a behavioural change in intact animal. (Kandel and Spencer, 1968). Research on memory therefore must combine the accurate observation of animal behaviour, in very well understood situations, and a knowledge of the biology of the brain and of the kind of physiological processes likely to be involved in memory storage. If one is sure that a certain behavioural change does depend uniquely on memories gained during an experiment it is possible, by using likely inhibitors of brain physiology to test the susceptibility of memories to disruption.

**Computer Vision** Song-Chun Zhu,Ying Nian Wu,2023-03-15 As the first book of a three-part series, this book is offered as a tribute to pioneers in vision, such as Béla Julesz, David Marr, King-Sun Fu, Ulf Grenander, and David Mumford. The authors hope to provide

foundation and, perhaps more importantly, further inspiration for continued research in vision. This book covers David Marr's paradigm and various underlying statistical models for vision. The mathematical framework herein integrates three regimes of models (low-, mid-, and high-entropy regimes) and provides foundation for research in visual coding, recognition, and cognition. Concepts are first explained for understanding and then supported by findings in psychology and neuroscience, after which they are established by statistical models and associated learning and inference algorithms. A reader will gain a unified, cross-disciplinary view of research in vision and will accrue knowledge spanning from psychology to neuroscience to statistics.
