Bee Products - Chemical and Biological Properties José M Alvarez-Suarez, 2017-09-05 This book presents an updated discussion of the chemical composition and biological properties

of the main bee products. Specific attention is focused on the beneficial biological activities of bee products in human health. Honey, royal jelly, propolis, bee pollen and bee venom are used as nutriment and in traditional medicine. Their composition is rather variable and depends on the floral source and external factors, such as seasonal, environmental conditions and processing. Bee products are rich in several essential nutrients and non essential nutrients, as sugars, minerals, proteins, free amino acids, vitamins, enzymes and polyphenols, that seem to be closely related to their biological functions. The effects of these products in nutrition, aging and age-related diseases, cancer, neurodegenerative diseases and pathogen infections are discussed.

Obesity and Diabetes Anthony H. Barnett, Sudhesh Kumar, 2005-04-08 Obesity has become the most common chronic disease of the present day, with significant increases in prevalence in populations across the world and all age groups. This has resulted in a dramatic increase in obesity-related metabolic and cardiovascular complications, making it an important public health issue. Type 2 diabetes associated with obesity or 'diabesity' is today the most common form of type 2 diabetes. It is also associated with a number of other cardiovascular risk factors, which constitute the metabolic syndrome. Effective management of 'diabesity' is crucial to the reduction of morbidity and premature mortality due to cardiovascular disease. This book comprises chapters written by leading international experts on various aspects of obesity-related diabetes. As a practical reference guide, it is suitable for all professionals with an interest in this field. Emerging problems such as childhood 'diabesity' and the impact of obesity on polycystic ovary syndrome will be of interest not only to

paediatricians and endocrinologists, but also to general practitioners and other healthcare professionals. The contemporary approach to the clinical assessment of obesity and its management in both primary and secondary care settings is also described.

Room 555 Cristy Watson, 2019-01-29 Fourteen-year-old Roonie loves hip-hop almost as much as she loves her grandmother. Roonie cannot wait to compete in her school's dance competition. But as her grandmother's health deteriorates, Roonie becomes more and more reluctant to visit her in the care home. These feelings of guilt and frustration cause Roonie to mess things up with her hip-hop dance partner and best friend, Kira. But while doing some volunteer hours in the hospital geriatric ward, Roonie meets an active senior recovering from a

bad fall. Their shared love of dance and the woman's zest for life help Rooney face her fears, make amends with Kira and reconnect with Gram before it's too late.
