Super Stunts Ian Boyd, Boyd, JR., 1998-03 Presents simple instructions for folding paper to make 10 airplanes that each perform a different maneuver or stunt.

The Great International Paper Airplane Book Jerry Mander, George Dippel, Howard Luck Gossage, 1967 Paper airplanes as serious science? No longer shamefully relegated to the back rows of elementary-school sports stadiums, paper airplanes come into their own with this amusing-and instructive-book. The Great International Paper Airplane Book documents the proceedings of the first (and possibly only) International Paper Airplane Competition conducted by Scientific American. In addition to the behind-the-scenes story and official records of the Competition, readers will discover intriguing mini-essays on the historical, aesthetic, technological, and folkloric aspects of the paper airplane and on its startling implications for the future of aviation. Best of all, there are dozens of cut-fold-and-fly-them-yourself planes to experiment with. Combining real science with outright fun, this book appeals to paper airplane enthusiasts and would-be aviators of every age.

Fantastic Paper Airplanes Jack Botermans, Heleen Tichler, 2004 Fantasy fliers, reproductions of real planes, experimental models, and competition craft: these marvelous paper airplanes, shown in full color, will set the imagination soaring. Every aviation enthusiast will find more than a few favorites among these 34 aircraft, which range from a modified version of the Wright brothers' biplane to an out-of-this-world flying saucer. The "Speedy" design is a cross between the French Mirage jet and a bat, and true to its name, is a fast and cunning model. The pterodactyl takes inspiration from the prehistoric flying reptile and is simple to make. Or try a facsimile of the F-16 Fighter, Tupolev, Catapult Defense Craft, Matchstick Rocket, Starship, or Sailplane. General instructions on tools and techniques, plus detailed folding plans for each one, will help you construct them all.

Storm Flight Mark Berent, 1993 The fifth and final novel in this Vietnam series encompasses a daring raid on a POW camp to get evidence that could effect the war. Read by Paul Ukena.

Stormchasers: The Hurricane Hunters and Their Fateful Flight into Hurricane Janet David Toomey, 2003-06-17 Fifty years after Isaac's Storm, a riveting story of the first Hurricane Hunters, and the one crew who paid the ultimate price. In a virtual age when tempests are monitored by global positioning and The Weather Channel, Stormchasers reminds us that our first understanding of hurricanes was directly built on the risks and sacrifices of living, breathing heroes, writes Hampton Sides (author of Ghost Soldiers). In September 1955, Navy Lieutenant Commander Grover B. Windham and a crew of

eight flew out of Guantánamo Bay into the eye of Hurricane Janet swirling in the Caribbean: a routine weather reconnaissance mission from which they never returned. In the wake of World War II, the Air Force and the Navy had discovered a new civilian arena where daring pilots could test their courage and skill. These Hurricane Hunters flew into raging storms to gauge their strength and predict their paths. Without computer, global positioning, or satellite support, they relied on rudimentary radar systems to locate the hurricane's eye and estimated the drift of their aircraft by looking at windblown waves below. Drawing from Navy documents and interviews with members of the squadron and relatives of the crew, Stormchasers reconstructs the ill-fated mission of Windham's crew from preflight checks to the chilling moment of their final transmission.

Great Books for Boys Kathleen Odean, 2000 The author of Great Books for Girls again draws on her experience as a librarian. Like the companion volume, her new roundup includes picture books as well as books for middle graders and older readers, approximately to age 14. Odean's annotations are, as before, a clearly written combination of content and commentary, with basic imprint information (though no ISBNs) and suggested age level provided for each book. She has retained some titles from the previous book, but many are different. The organization is also slightly different here, and the table of contents has been expanded for easier use.--Booklist

Paper Flight Audrey Grace, 2022-07-24 My name is Clara Hamilton and I was accused of murdering my father. I know who did it but no one believes me. My stepmother made sure of it. Sent to Blackwater Asylum, I'm determined to prove my innocence and escape this place of nightmares. The only thing is, I don't know what's real and what isn't anymore. Visions and nightmares plague me, showing maybe I really am capable of what they accused me of. My only solace is the legend of the origami cranes my governess told me about before my life was destroyed. I work furiously day and night to make one thousand paper cranes as I repeat my wish with vengeance in my soul. I learn quickly all magic has a price, but it's one I'm willing to pay to escape this living nightmare. This light horror book is suitable for teens and adults alike. Please see the author's note for further information on content which may be disturbing, along with a note on the use of historical terminology.

Paper Airplanes John Klacsmann, Andrew Lampert, 2015 Filmmaker, painter, anthropologist, musicologist and occultist--Harry Smith (1923-1991) was an incomparable polymath and seminal figure in the realms of beat culture and avant-garde art. Smith's kaleidoscopic experimental films have influenced generations of artists and cinephiles, while his landmark three-volume compilation, the Anthology of American Folk Music (1952), laid the foundation for the folk music revival of the 1950s and 1960s. In addition to his ecstatic artwork, Smith is renowned for his vast collections of curious objects. The Collections of Harry Smith, Catalogue Raisonné series spotlights and indexes his eclectic research obsessions. Volume one features richly detailed photographic documentation of 251 paper airplanes gathered by Smith

from the streets of New York City over an approximately 20-year period. Whimsical and weird, the paper airplanes rank among Smith's most mysterious collecting pursuits. This extensive compendium presents the fruits of his extraordinary aeronautic pursuit and highlights the tangled history and myths that accompany them.

Good Ideas Michael Rosen, 2014-09-11 We live in a world surrounded by all the stuff that education is supposed to be about: machines, bodies, languages, cities, votes, mountains, energy, movement, plays, food, liquids, collisions, protests, stones, windows. But the way we've been taught often excludes all sorts of practical ways of finding out about ideas, knowledge and culture - anything from cooking to fixing loo cisterns, from dance to model making, from collecting leaves to playing 'Who am I?'. The great thing is that you really can use everything around you to learn more. Learning should be much more fun and former children's laureate, million-selling author, broadcaster, father of five and all-round national treasure, Michael Rosen wants to show you how. Forget lists, passing tests and ticking boxes, the world outside the classroom can't be contained within the limits of any kind of curriculum - and it's all the better for it. Long car journeys, poems about farting, cake baking, even shouting at the TV can teach lessons that will last a lifetime. Packed with enough practical tips, stories and games to inspire a legion of anxious parents and bored children, *Good Ideas* shows that the best kind of education really does start at home.

An Approach to the Problem of Estimating Severe and Repeated Gust Loads for Missile Operations Harry Press, Roy Steiner, 1958 An analysis of available airplane measurements of vertical gust velocity is presented in order to arrive at a simple description of the frequency and intensity of gust velocities experienced by airplanes in operations. For the purpose of application to missile operations; the results obtained are modified to eliminate the effects of storm-avoidance procedures normally followed in airplane operations. The frequency distributions of gust velocity are then converted to a form appropriate for use in power spectral response calculations. Methods of applying the results to the estimation of the large and the small repeated loads in missile operations are then developed. Simple methods of estimating the gust loadings that will be exceeded with a given probability are presented in terms of missile response parameters and turbulence parameters. The limitations of the present results are also discussed briefly.
