Humean Moral Pluralism Michael B. Gill, 2014 Michael B. Gill offers a new account of Humean moral pluralism: the view that there are different moral reasons for action, which are based on human sentiments. He explores its historical origins, and argues that it offers the most compelling view of our moral experience. Together, pluralism and Humeanism make a philosophically powerful couple.

Criminal Law Markus Dubber, Tatjana Hörnle, 2014-03-28 Criminal Law: A Comparative Approach presents a systematic and comprehensive analysis of the substantive criminal law of two major jurisdictions: the United States and Germany. Presupposing no familiarity with either U.S. or German criminal law, the book will provide criminal law scholars and students with a rich

comparative understanding of criminal law's foundations and central doctrines. All foreign-language sources have been translated into English; cases and materials are accompanied by heavily cross-referenced introductions and notes that place them within the framework of each country's criminal law system and highlight issues ripe for comparative analysis. Divided into three parts, the book covers foundational issues - such as constitutional limits on the criminal law - before tackling the major features of the general part of the criminal law and a selection of offences in the special part. Throughout, readers are exposed to alternative approaches to familiar problems in criminal law, and as a result will have a chance to see a given country's criminal law doctrine, on specific issues and in general, from the critical distance of comparative analysis.

The Big Sort Bill Bishop, 2009-05-11 The award-winning journalist reveals the untold story of why America is so culturally and politically divided in this groundbreaking book. Armed with startling demographic data, Bill Bishop demonstrates how Americans have spent decades sorting themselves into alarmingly homogeneous communities—not by region or by state, but by city and neighborhood. With ever-increasing specificity, we choose the communities and media that are compatible with our lifestyles and beliefs. The result is a country that has become so ideologically inbred that people don't know and can't understand those who live just a few miles away. In *The Big Sort*, Bishop explores how this phenomenon came to be, and its dire implications for our country. He begins with stories about how we live today and then draws on history, economics, and our changing political landscape to create one of the most compelling big-picture accounts of America in recent memory.

Western Geopolitical Thought in the Twentieth Century (Routledge Library Editions: Political Geography) Geoffrey Parker, 2014-10-03 This book surveys the development of geo-political thought in the twentieth century and relates it to international political developments, as well as examining how sound geopolitical theories are. It considers the work of Mackinder, Hartshorne, and Haushofer and his disciples in Germany who influenced the Nazis; and of more recent developments including Marxist geographical writing.

Wittgenstein's Philosophy of Mathematics

Pasquale Frasca, 2006-12-05 Wittgenstein's role was vital in establishing mathematics as one of this century's principal areas of philosophic inquiry. In this book, the three phases of Wittgenstein's reflections on mathematics are viewed as a progressive whole, rather than as separate entities. Frasca builds up a systematic construction of Wittgenstein's representation of the role of arithmetic in the theory of logical operations. He also presents a new interpretation of Wittgenstein's rule-following considerations - the 'community view of internal relations'.

Evidence from Earth Observation Satellites Ray Purdy, Denise Leung, 2012-11-21 Evidence from Earth Observation Satellites is an edited collection analysing emerging legal issues surrounding the use of satellite data as evidence. It considers whether data from satellite technologies can be a legally reliable, effective evidential tool in contemporary legal systems.

Advances in Artificial Life Mathieu

Capcarrere, Alex A. Freitas, Peter J. Bentley, Colin G. Johnson, Jon Timmis, 2005-09-19

The Artificial Life term appeared more than 20 years ago in a small corner of New Mexico, USA. Since then the area has developed dramatically, many researchers joining enthusiastically and research groups sprouting everywhere. This frenetic activity led to the emergence of several strands that are now established fields in themselves. We are now reaching a stage that one may describe as maturer: with more rigour, more benchmarks, more results, more stringent acceptance criteria, more applications, in brief, more sound science. This, which is the normal path of all new areas, comes at a price, however. A certain enthusiasm, a certain adventurousness from the early years is fading and may have been lost on the way. The field has become more reasonable. To counterbalance this and to encourage lively discussions, a conceptual track, where papers were judged on criteria like importance and/or novelty of the concepts proposed rather than the experimental/theoretical results, has been introduced this year. A conference on a theme as broad as Artificial Life is bound to be very - verse, but a few tendencies emerged. First, fields like 'Robotics and Autonomous Agents' or 'Evolutionary Computation' are still extremely active and keep on bringing a wealth of results to the A-Life community. Even there, however, new tendencies appear, like collective robotics, and more specifically self-assembling robotics, which represent now a large subsection. Second, new areas appear.
