Nonfiction Sound and Story for Film and Video Amy DeLouise, Cheryl Ottenritter, 2019-09-30 This book guides nonfiction storytellers in the art of creatively and strategically using sound to engage their audience and bring stories to life. Sound is half of film and video storytelling, and yet its importance is often overlooked until a post-production emergency arises. Written by two experienced creators—one a seasoned nonfiction producer/director with a background in music, and one a sound designer who owns a well-regarded mix studio—this book teaches nonfiction producers, filmmakers, and branded content creators how to reimagine their storytelling by improving sound workflow from field to post. In addition to real-world examples from the authors’ own experiences, interviews with and examples from industry professionals across many genres of nonfiction production are included throughout. Written in a conversational style, the book pinpoints practical topics and considerations like 360 video and viewer accessibility. As such, it is a vital point of reference for all nonfiction filmmakers, directors, and producers, or anyone wanting to learn how to improve their storytelling. An accompanying Companion Website offers listening exercises, production sound layout diagrams, templates, and other resources.

The Routledge Handbook to the Ghost Story Scott Brewster, Luke Thurston, 2017-11-14 The Handbook to the Ghost Story sets out to survey and significantly extend a new field of criticism which has been taking shape over recent years, centring on the ghost story and bringing together a vast range of interpretive methods and theoretical perspectives. The main task of the volume is to properly situate the genre within historical and contemporary literary cultures across the globe, and to explore its significance within wider literary contexts as well as those of the supernatural. The Handbook offers the most significant contribution to this new critical field to date, assembling some of its leading scholars to examine the key contexts and issues required for understanding the emergence and development of the ghost story.

HCI International 2023 - Late Breaking Posters Constantine Stephanidis, Margherita Antona, Stavroula Ntoa, Gavriel Salvendy, 2023-12-11 This two-volume set CCIS 1957-1958 is part of the refereed proceedings of the 25th International Conference on Human-Computer Interaction, HCII 2023, which was held in Copenhagen, Denmark, in July 2023. A total of 5583 individuals from academia, research institutes, industry, and governmental agencies from 88 countries submitted contributions, and 1276 papers and 275 posters were included in the proceedings that were published just before the start of the conference. Additionally, 296 papers and 181 posters are included in the volumes of the proceedings published after the conference, as “Late Breaking Work” (papers and posters). The contributions thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas.

Individual Differences in Hemispheric Specialization A. Glass, 2012-12-06 This volume originates from a NATO Advanced Research Workshop held in Maratea, Italy from 8th-15th October 198~. Aims and contributions are described at greater length in the Introduction and the following chapters. It is hoped that this volume will provide a critical overview of hemispheric specialization in relation to individual differences, but one that is not intended to be comprehensive. Three contributions on this theme are made by authors who were invited to the Workshop but were unable to participate in it. The volume contains a critical appraisal of the differentially specialized functions of left and right human cerebral hemispheres in verbal and visuospatial domains respectively (formerly cerebral dominance). In relation to individual variation due, for example, to gender and handedness. Critical cross-comparison of several methods of assessing hemispheric specialization such as perceptual/behavioral, clinical/neurological, electrophysiological and real time methods of assessment of cerebral orientation have been made. Individual differences have been considered in relation to statistical concepts in the assessment of cerebral lateralization. Some emphasis has been placed on the application of these methods and concepts to psychopathology.

A Multimodal End-2-End Approach to Accessible Computing Pradipta Biswas, Carlos Duarte, Patrick Langdon, Luis Almeida, 2015-07-16 This book illustrates how Interactive Systems can help elderly and disabled populations engage with the world around them by finding methods of overcoming the difficulties these communities face when using such systems by presenting the latest in state-of-the-art technology and providing a vision for accessibility for the near future. The challenges faced by accessibility practitioners are discussed and the different phases of delivering accessible products and services are explored. A collection of eminent researchers from around the world cover topics on developing and standardizing user models for inclusive design, adaptable multimodal system development for digital TV and ubiquitous devices, presenting research on intelligent voice recognition, adaptable pointing, browsing and navigation, and affect and gesture recognition. The research not only focuses on how these can be hugely beneficial to primary users, but often finding useful applications for their able-bodied counterparts. For this new edition, new chapters have been added focusing on the latest developments in games for the visually impaired, inclusive interfaces for the agricultural industry in India and technologies to improve accessibility in broadcasting in Japan. A Multimodal End-2-End Approach to Accessible Computing will be an invaluable resource for both researchers and practitioners alike.

Crafting Stories for Virtual Reality Melissa Bosworth, Lakshmi Sarah, 2018-11-07 We are witnessing a revolution in storytelling. Publications all over the world are increasingly using immersive storytelling—virtual reality, augmented reality and mixed reality—to tell compelling stories. The aim of this book is to distill the lessons learned thus far into a useful guide for reporters, filmmakers and writers interested in telling stories in this emerging medium. Examining ground-breaking work across industries, this text explains, in practical terms, how storytellers can create their own powerful immersive experiences as new media and platforms emerge.

Immersive Sound Agnieszka Roginska, Paul Geluso, 2017-10-17 Immersive Sound: The Art and Science of Binaural and Multi-Channel Audio provides a comprehensive guide to multi-channel sound. With contributions from leading recording engineers, researchers, and industry experts, Immersive Sound includes an in-depth description of the physics and psychoacoustics of spatial audio as well as practical applications. Chapters include the history of 3D sound, binaural reproduction over headphones and loudspeakers, stereo, surround sound, height channels, object-based audio, soundfield (ambisonics), wavefield synthesis, and multi-channel mixing techniques. Knowledge of the development, theory, and practice of spatial and multi-channel sound is essential to those advancing the research and applications in the rapidly evolving fields of 3D sound recording, augmented and virtual reality, gaming, film sound, music production, and post-production.

Channels of Communication and Related Factors W. Drew Gouvier, 2002 This special issue brings together a group of articles related to aspects of disturbed language use and understanding. Relevant to persons in the practice of neuropsychology and rehabilitation psychology, the articles: *review and integrate a systematic program of research that examines core functional abilities that underlie the process of reading; *offer a replication of a previous work with persons with schizophrenia, which demonstrated a frequent superiority of monaural versus binaural language comprehension; *offer a thorough compilation of results from research on emotional processing; *introduce the role of the prosodic channel in communication and provide a description and classification scheme for the various prosodic disorders; and *examine the impact of variations in the prosodic and lexical channels of speech.

Intermedial Theatre Mark Crossley, 2019-05-01 This rigorous yet accessible collection demystifies the principles of intermediality whilst examining its place in 21st century theatrical practice. Bringing together chapters and case studies from top thinkers in the field, this book clarifies the key theoretical ideas and practical impacts of intermediality while encouraging students to experiment with it in their own practical work. Offering an engaging insight into one of the most dominant trends in contemporary theatre, this is essential reading for students of theatre, performance and media studies.

Towards Embodied Performance Rachel Dickstein, 2024-06-07 Towards Embodied Performance invites directors and other generative performance makers to experiment with making their own original, visually stunning, sonically immersive, and physically rigorous embodied performance. Through historical context, the author’s 30-plus years of experience, and original interviews with leading theatre artists, this book sets the stage for a new generation of artists building boundary-breaking work. Directors are often categorized into one of only two frameworks: the Stanislavskian director, whose method is based on text analysis and character wants and needs, and the “auteur” director, whose work might focus on visual spectacle at the expense of text or character objectives. This book argues that the director of embodied performance fuses these two

approaches, acting as the author of the event. In Part I, readers will explore the core elements of embodied performance – space, time, body, language, and action – through a lens that bridges traditional directing methodology with experimental, devised, collaborative theatre-making. Part II provides examples of this embodied practice by multi-disciplinary artists in visual and sound installation, video and film, dance-theatre, and new music/opera, including such artists as Shirin Neshat, James Turrell, Bill T. Jones, Janet Cardiff, Okwui Okpokwasili, William Kentridge, and Heather Christian. Part III suggests creative prompts and exercises for performance makers to engage the visual, physical, textual, and sonic in compositional storytelling on stage. Towards Embodied Performance is an invaluable resource for theatre directors, devisers, and generative artists at all levels from students to teachers, from early-career to mid-career artists. Directors, actors, choreographers, designers, composers, writers, scholars, and engaged audience members can all use this text to explore collaboratively created performance that invites its audience into the ripest version of the present moment.

Materializing Memories Susan Aasman, Andreas Fickers, Joseph Wachelder, 2018-08-23 A multitude of devices and technological tools now exist to make, share, and store memories and moments with family, friends, and even strangers. Memory practices such as home movies, which originated as the privilege of a few, well-to-do families, have now emerged as ubiquitous and immediate cultures of sharing. Departing from the history of home movies, this volume offers a sophisticated understanding of technologically mediated, mostly ritualized memory practices, from early beginnings in the fin-de-siècle to today. Departing from a longue durée perspective on home movie practices, Materializing Memories moves beyond a strict historical study to grapple with highly theorized fields, such as media studies, memory studies, and science and technology studies (STS). The contributors to this volume reflect on these different intellectual backgrounds and perspectives, but all chapters share a common framework by addressing practices of use, user configurations, and relevant media landscapes. Grasping the cultural dynamics of such multi-faceted practices requires a multidimensional conceptual approach, here achieved by centering around three concepts as central analytical lenses: dispositifs, generations, and amateurs.

A/V A to Z Richard W. Kroon, 2010-03-30 Defining more than 10,000 words and phrases from everyday slang to technical terms and concepts, this dictionary of the audiovisual language embraces more than 50 subject areas within film, television, and home entertainment. It includes terms from the complete lifecycle of an audiovisual work from initial concept through commercial presentation in all the major distribution channels including theatrical exhibition, television broadcast, home entertainment, and mobile media. The dictionary definitions are augmented by more than 700 illustrations, 1,600 etymologies, and nearly 2,000 encyclopedic entries that provide illuminating anecdotes, historical perspective, and clarifying details.

Doing Experimental Media Archaeology Andreas Fickers, Annie Oever, 2022-12-31 This book offers a plea to take the materiality of media technologies and the sensorial and tacit dimensions of media use into account in the writing of the histories of media and technology. In short, it is a bold attempt to question media history from the perspective of an experimental media archaeology approach. It offers a systematic reflection on the value and function of hands-on experimentation in research and teaching. Doing Experimental Media Archaeology: Theory is the twin volume to Doing Experimental Media Archaeology: Practice, authored by Tim van der Heijden and Aleksander Kolkowski.

Storytelling for Virtual Reality John Bucher, 2017-07-06 Storytelling for Virtual Reality serves as a bridge between students of new media and professionals working between the emerging world of VR technology and the art form of classical storytelling. Rather than examining purely the technical, the text focuses on the narrative and how stories can best be structured, created, and then told in virtual immersive spaces. Author John Bucher examines the timeless principles of storytelling and how they are being applied, transformed, and transcended in Virtual Reality. Interviews, conversations, and case studies with both pioneers and innovators in VR storytelling are featured, including industry leaders at LucasFilm, 20th Century Fox, Oculus, Insomniac Games, and Google. Mild Traumatic Brain Injury Dominic A. Carone, Ph.D., 2012-08-22 This authoritative volume is the first book specifically devoted to symptom validity assessment with individuals with a known or suspected history of mild traumatic brain injury (MTBI). It brings together leading experts in MTBI, symptom validity assessment, and malingering to provide a thorough and practical guide to the challenging task of assessing the validity of patient presentations after an MTBI. The book describes techniques that can drastically alter case conceptualization, treatment, and equitable allocation of resources. In addition to covering the most important symptom validity assessment methods, this timely volume provides guidance to clinicians on professional and research issues, and information on symptom validity testing in varied populations. The book covers MTBI assessment in such specific settings and populations as clinical, forensic, sports, children, gerontological, and military. It also addresses professional issues such as providing feedback to patients about symptom validity, ethical issues, and diagnostic schemas. Mild Traumatic Brain Injury will provide neuropsychologists, referring health care providers, courts, disability insurance companies, the military, and athletic teams/leagues with the in-depth, current information that is critical for the accurate and ethical evaluation of MTBI. Key Features: Provides in-depth, expert coverage of one of the most critical topics for clinical neuropsychologists Includes contributions from the leading authorities on both MTBI/post-concussive syndrome and malingering/symptom validity Covers assessment in such contexts as civil forensics, sports, military/veterans, and gerontological settings

The Immersive Enclosure Paul Roquet, 2022-05-24 Winner, 2023 Lewis Mumford Award for Outstanding Scholarship in the Ecology of Technics, Media Ecology Association Although virtual reality promises to immerse a person in another world, its true power lies in its ability to sever a person's spatial situatedness in this one. This is especially clear in Japan, where the VR headset has been embraced as a way to block off existing social environments and reroute perception into more malleable virtual platforms. Is immersion just another name for enclosure? In this groundbreaking analysis of virtual reality, Paul Roquet uncovers how the technology is reshaping the politics of labor, gender, home, and nation. He examines how VR in Japan diverged from American militarism and techno-utopian visions and became a tool for renegotiating personal space. Individuals turned to the VR headset to immerse themselves in three-dimensional worlds drawn from manga, video games, and genre literature. The Japanese government promised VR-operated robots would enable a new era of remote work, targeting those who could not otherwise leave home. Middle-aged men and corporate brands used VR to reimagine themselves through the virtual bodies of anime-styled teenage girls. At a time when digital platforms continue to encroach on everyday life, The Immersive Enclosure takes a critical look at these attempts to jettison existing social realities and offers a bold new approach for understanding the media environments to come.

Binaural Interference: a Guide for Audiologists James Jerger, Carol A. Silverman, 2018-02-23 Binaural interference occurs when the speech input to one ear interferes with the input to the other ear during binaural stimulation. The first published study on binaural interference twenty-five years ago demonstrated that some individuals, particularly older individuals, perform more poorly with two hearing aids than with one and/or more poorly with binaural than monaural stimulation on electrophysiologic as well as behavioral measures. Binaural interference is relevant to every audiologist because it impacts the successful use of binaural hearing aids and

may explain communicative difficulty in noise or other challenging listening situations in persons with normal-hearing sensitivity as well as persons with hearing loss. This exciting new book written by two highly respected audiologists first traces the history of its study by researchers, then reviews the evidence, both direct and indirect, supporting its reality. This is followed by a discussion of the possible causes of the phenomenon and in-depth analysis of illustrative cases. The authors outline a systematic approach to the clinical detection, evaluation and amelioration of individuals who exhibit binaural interference. Suggestions are furnished on improved techniques for evaluation of the binaural advantage in general and on sensitized detection of the disorder in particular. The book ends with recommendations for future directions. Given the adverse impact of binaural interference on auditory function and its occurrence in a significant subset of the population with hearing loss, as well as in some individuals with normal-hearing sensitivity, research on binaural interference only recently has begun to flourish, and adaptation of audiologic clinical practice to identify, assess, and manage individuals with binaural interference has yet to become widespread. The authors intend for the book to provide impetus for pursuing further research and to encourage audiologists to explore the possibility of binaural interference when patient complaints suggest it and when performing audiologic evaluations. The book is intended for practicing clinical audiologists, audiology students, and hearing scientists.

New Directions in Radical Cartography Phil Cohen, Mike Duggan, 2021-12-17 This collection explores the meaning of maps and of map-making in the modern world.

Perspectives of Cognitive, Psychosocial, and Learning Difficulties From Childhood to Adulthood: Practical Counseling Strategies Sofologi, Maria, Kougioumtzis, Georgios, Koundourou, Christiana, 2023-05-16 Children with learning disabilities can be as sharp as their peers; however, they may find it challenging to write, read, reason out information, spell things correctly, or process information. Due to this, it is critical for students to understand the ways of learning that suit them the best. They may not be aware of the different ways they can learn or may not be able to develop a self-reliant approach to learning and will often seek help. Perspectives of Cognitive, Psychosocial, and Learning Difficulties From Childhood to Adulthood: Practical Counseling Strategies provides a guide for understanding learning difficulties and sheds light on a variety of strategies that can be implemented in the class by teachers. The book also underscores the importance of literacy and numeracy and the relationship between learning difficulties and student wellbeing. Covering key topics such as counseling, coping strategies, and interventions, this premier reference source is ideal for administrators, policymakers, researchers, scholars, academicians, practitioners, instructors, and students.
