Looking for the Ancient Greeks Martha Beck,2018-12-21 This book is a response to Antonio Damasio's Looking for Spinoza: Joy, Sorrow and the Feeling Brain. Damasio, a prominent neuroscientist, begins by explaining what the latest discoveries in the neurosciences tell us about human psychology. He rejects the two prominent models of human psychology since the Western Enlightenment, the blank slate and dualism. Instead, says Damasio, we now know that the brain and body are completely integrated through a complex system of neural maps. Damasio's recognition of the complete unity of body, brain and mind leads him to the conclusion that we have to develop ideas and ideas of ideas and use them to reform our neural maps. This book presents Damasio's own ideas about the most "serious" questions in life that we ought to use to reform ourselves and our societies, including homeostasis; spirituality; feelings; suffering and death; the value of religious traditions; and the value of the philosophical path to God among others. The book presents additional positions on the same serious questions from perspectives that it is hoped Damasio will consider adding to or, in some cases, replacing, his position. Most of the book is a discussion of many aspects of Ancient Greek culture, showing how it developed into a complex cultural system that aimed to create exactly the kind of integrated system of neural maps that Damasio claims is so important for us today. As such, this book strives to contribute to our collective need to reform our system of education based on our new understanding of the nature of the human psyche.

High Performance Computing Alex Veidenbaum,Kazuki Joe,Hideharu Amano,Hideo Aiso,2003-11-18 The 5th International Symposium on High Performance Computing (ISHPC-V) was held in Odaiba, Tokyo, Japan, October 20-22, 2003. The symposium was thoughtfully planned, organized, and supported by the ISHPC Organizing Committee and its collaborating organizations. The ISHPC-V program included two keynote speeches, several invited talks, two panel discussions, and technical sessions covering theoretical and applied research topics in high-performance computing and representing both academia and industry. One of the regular sessions highlighted the research results of the ITBL project (IT-based research laboratory, <http://www.itbl.riken.go.jp/>). ITBL is a Japanese national project started in 2001 with the objective of realizing a virtual joint research environment using information technology. ITBL aims to connect 100 supercomputers located in main Japanese scientific research laboratories via high-speed networks. A total of 58 technical contributions from 11 countries were submitted to ISHPC-V. Each paper received at least three peer reviews. After a thorough evaluation process, the program committee selected 14 regular (12-page) papers for presentation at the symposium. In addition, several other papers with favorable reviews were recommended for a poster session presentation. They are also included in the proceedings as short (8-page) papers. The program committee gave a distinguished paper award and a best student paper award to two of the regular papers. The distinguished paper award was given for "Code and Data Transformations for Improving Shared Cache Performance on SMT Processors" by Dimitrios S. Nikolopoulos. The best student paper award was given for "Improving Memory Latency Aware Fetch Policies for SMT Processors" by Francisco J. Cazorla.
