Handmade Packaging Workshop Rachel Wiles, 2012 Handmade Packaging Workshop explores innovation, design and the beautiful aesthetic of handmade packaging. Packed with tutorials, case studies, inspirational work and profiles of practitioners, the book follows a logical learning structure, beginning with an understanding of tools and materials, through inspirational examples from successful designers, to a final section with tutorials on the skills needed to execute packaging design as well as advice on how to set yourself up as a professional. Sections two and three form the main focus of the book, comprising a host of case studies that are organized by type of packaging element, whether labels, boxes or bags, or recycled and reusable elements such as fabrics and wraps. Within each case study, icons and captions identify whether the packaging has been handmade from scratch, hand-finished, contains handmade elements, or simply draws on the handmade aesthetic. The final section offers tutorials that show the reader how to create a repeat pattern, a box template, screenprint labels, and so on. In addition, profiles and interviews offer an understanding of the challenges faced by industry professionals.

Developer's Workshop to COM and ATL 3.0 Andrew W. Troelsen, 2000-06-30 Microsoft's Component Object Model is one of the most important concepts in software development today. Developer's Workshop

to COM and ATL 3.0 provides an in-depth treatment of COM and shows how to adopt a component framework, namely ATL, to help lessen the burden of repetitive code. Every chapter contains integrated lab assignments that give you numerous opportunities to build COM clients and servers using raw C++ and IDL, as well as the Active Template Library. The book is divided into five sections, each focusing on a particular aspect of COM and ATL development. The book begins with a review of object-oriented and interface-based programming techniques, then moves into the core aspects of COM, including a full examination of language independence and location transparency. The author illustrates the numerous CASE tools used during ATL development and discusses apartments, COM exceptions, object identity, and component housing, in addition to various advanced concepts such as COM categories and tear-off interfaces. The fourth section examines a number of “COM patterns” such as enumerators, collections, scriptable objects, and callback interfaces. The book closes with an investigation of using ATL as a windowing framework and wraps up with the development of a full-blown animated ActiveX control using ATL. Learn how to build Visual Basic, Java, C++, and web-based COM clients; use common VBA programming structures such as conditions, loops, arrays, and collections; master ATL’s integrated CASE tools; dive into the details of object identity and the ATL COM map; build COM object models and leverage the ATL object map; develop full ActiveX controls with ATL.

Proceedings of the International Workshop on Applications of Neural Networks to Telecommunications Joshua Alspector, Rodney Goodman, Timothy X. Brown, 2013-06-17 The world is

witnessing the rapid evolution of its own nervous system by an unparalleled growth in communication technology. Like the evolution of the nervous systems in animals, this growth is being driven by a survival-of-the-fittest-mechanism. In telecommunications, the entities that fuel this growth are companies and nations who compete with each other. Companies with superior information systems can outrun and outsmart others because they serve their customers better. On the threshold of an explosion in the variety, speed and usefulness of telecommunication networks, neural network researchers can make important contributions to this emerging new telecommunications infrastructure. The first International Workshop on Applications of Neural Networks to Telecommunications (IWANNT) was planned in response to the telecommunications industry's needs for new adaptive technologies. This workshop featured 50 talks and posters that were selected by an organizing committee of experts in both telecommunications and neural networks. These proceedings will also be available on-line in an electronic format providing multimedia figures, cross-referencing, and annotation.
