Racehorse Breeding Theories Frank J. Mitchell,2004 Here, in one volume, is a wide and varied assessment of the major breeding systems or theories, as well as the history and background of each. The writers give the reader all the necessary information they need to implement the theory and make it part of a breeding program. They also verify the relative scientific validity of the theories and various approaches to breeding -- publisher website (April 2007).

The Action Plan for Australian Birds 2010 Stephen Garnett,Judit Szabo,Guy Dutson,2011-09-14 The Action Plan for Australian Birds 2010 is the third in a series of action plans that have been produced at the start of each decade. The book analyses the International Union for Conservation of Nature (IUCN) status of all the species and subspecies of Australia's birds, including those of the offshore territories. For each bird the size and trend in their population and distribution has been analysed using the latest iteration of IUCN Red List Criteria to determine their risk of extinction. The book also provides an account of all those species and subspecies that are or are likely to be extinct. Each categorisation is justified on the basis of the latest research, including much unpublished material that has been made available during workshops conducted with leading ornithologists and conservation biologists around the country as well as phone interviews and correspondence. The result is the most authoritative account yet of the status of Australia's birds. In this completely revised edition each account covers not only the 2010 status but provides a retrospective assessment of the status in 1990 and 2000 based on current knowledge, taxonomic revisions and changes to the IUCN criteria, and then reasons why the status of some taxa has changed over the last two decades. Maps have been created specifically for the Action Plan based on vetted data drawn from the records of Birds Australia, its members and its partners in many government departments. The book contains some surprises - some alarming, some encouraging. The status of some birds has improved over the last two decades as a result of dedicated conservation management. Some may not have changed status but at least they are holding their own. Many, however, are continuing to decline and a distressing number are new to the list. There is also an increasing number of birds for which captive insurance populations need not only to be considered as a future option but actively pursued before it is too late. But this is not a book of lost causes. It is a call for action to keep the extraordinary biodiversity we have inherited and pass the legacy to our children. Every one of Australia's threatened taxa can be saved. This book describes the populations of species at greatest risk and outlines ways we can turn them around. 2012 Whitley Award Commendation for Zoological Resource.

Massachusetts Breeding Bird Atlas Wayne R. Petersen,W. Roger Meservey,2003 In 1974, the Massachusetts Audubon Society and the Massachusetts Division of Fisheries and Wildlife launched a five-year survey to map the distribution of all the birds that breed in the Commonwealth - the first such comprehensive effort in North America. Nearly 600 volunteers spent countless hours in the field collecting data. This landmark volume presents the results of their efforts. The book includes distribution maps showing possible, probable, and confirmed breeding areas for 198 Massachusetts nesting species on a grid of 989 tensquare-mile blocks. Opposite each species map is a summary account giving historical perspective, relative abundance, habitat, seasonal schedule, nest, egg, and song descriptions, clutch size, egg dates, number of broods, and other pertinent details. Each species account is illustrated with a scrupulously accurate, watercolor portrait by award-winning nature artists John Sill and Barry Van Dusen. The book also includes a set of six transparent overlay maps in an attached pocket that allow the reader to correlate key environmental factors with the distribution of nesting species. Introductory sections describe the atlas survey methodology, and two appen

The Historical Atlas of Breeding Birds in Britain and Ireland 1875-1900 Simon Holloway,2010-01-31 The landscape of Britain has been

irreversibly changed over the last century. Modern agriculture, urban expansion, industry and transport have all left their mark, altering the face of the countryside forever. Shifting with the changing scene, the fortunes of Britain and Ireland's bird populations have fluctuated dramatically over the years. As current farming practices have evolved, the natural habitats and breeding patterns of many species have been disrupted. Urban and industrial growth has brought with it the pressures of new land use, pesticides, pollution and human interference. The activities of sportsmen, collectors and farmers have also taken their toll over the years. The new Poyser title *The Historical Atlas of Breeding Birds in Britain and Ireland 1875-1900* is a fascinating book resulting from years of meticulous research by the author, Simon Holloway, who provides an absorbing account of the distribution changes of Britain and Ireland's birds over the last quarter of a century. Large colour distribution maps and their accompanying text paint a species-by-species picture of a period which completely transformed the landscape of this country. It is, says *Natural World* magazine, a classic case of 'why did no one write this book before?'...The experienced birder, using a knowledge of species requirements, can only marvel at what the long-vanished landscapes were then like. Birdwatch praises Simon Holloway's achievement, saying: This book brings together so much information from disparate sources, and its status maps present such a clear picture of our late Victorian avifauna, that it should take its place beside the BTO atlases on the bookshelf. While Birdwatching adds: If you are interested in the historical side of birds and their populations this book will be an endless source of fascination. As with all Poyser publications, the attention to detail, the lovingly produced illustrations and the sheer breadth of knowledge demonstrated by the author

Styx's Storm Lora Leigh, 2010-10-05 To save innocent, young Storme Montague from the claws of Breed slave traders, Wolf Breed Styx is forced to claim her himself on the condition that Storme will no longer be a virgin by night's end. And though Storme's defenses are up, Styx will free her in ways she never expects.

The Action Plan for Australian Birds 2020 Stephen T. Garnett, G Barry Baker, 2021-12-01 The Action Plan for Australian Birds 2020 is the most comprehensive review of the status of Australia's avifauna ever attempted. The latest in a series of action plans for Australian birds that have been produced every decade since 1992, it is also the largest. The accounts in this plan have been authored by more than 300 of the most knowledgeable bird experts in the country, and feature far more detail than any of the earlier plans. This volume also includes accounts of over 60 taxa that are no longer considered threatened, mainly thanks to sustained conservation action over many decades. This extensive book covers key themes that have emerged in the last decade, including the increasing impact of climate change as a threatening process, most obviously in Queensland's tropical rainforests where many birds are being pushed up the mountains. However, the effects are also indirect, as happened in the catastrophic fires of 2019/20. Many of the newly listed birds are subspecies confined to Kangaroo Island, where fire destroyed over half the population. But there are good news stories too, especially on islands where there have been spectacular successes with predator control. Such uplifting results demonstrate that when action plans are followed by action on the ground, threatened species can indeed be recovered and threats alleviated.

Field Guide to the Birds of East Asia Mark Brazil, 2019-08-22 This is the first single volume guide ever devoted to the eastern Asian avifauna. The eastern Asian region, centring especially on the major islands off the continental coast (including Japan and Taiwan) and the immediately adjacent areas of the Asian continent from Kamchatka in the north and including the Korean Peninsula are an important centre of endemism. Birds endemic to this region include representatives of many of the major families, from the world's largest eagle - Steller's Sea Eagle - to the tiny Formosan Firecrest. The east Asian continental coast and the offshore islands also form one of the world's major international bird migration routes,

especially for waterfowl, shorebirds and raptors, while the east Asian continental mainland itself is home to a wide range of species little known to western ornithologists such as Scaly-sided Merganser, Oriental Stork and Mugimaki Flycatcher. The guide features the most up-to-date text available, which, in conjunction with extensive colour plates throughout, facilitates the field identification of all of the species known from the region. Colour distribution maps enhance the text by providing a visual analysis of the summer, winter and migratory ranges of all species.

Storm Constantine's Wraeththu Mythos 'Breeding Discontent' Wendy Darling, Bridgette Parker, 2003 A dark tale set in Megalithica, Breeding Discontent tells the story of Lisia, a hostling in a secret Varrish breeding facility, completely isolated from society and forced to make pearls - new life - on demand by the military. After defeating Varrish rule, the Gelaming uncover the hidden facility, which has been abandoned by its administrators. Only a group of struggling survivors remain, Lisia and nearly two hundred juveniles. Lisia, suspicious and confused by these unfamiliar hara, is fearful of being evicted from the only home and lifestyle he has ever known, as well as losing custody of his charges. Warily, he forms an alliance with the young Lord Swift Parasiel, newly placed in power, and his illustrious hostling, Cobweb. Together these hara work to correct old wrongs, secure new rights, and challenge a liberation that at times feels more like conquest. The past and the present begin to overlap, as Lisia's chilling history is told through the pages of his diary and he struggles to fight for his future, and the welfare of those in his care.

Volume 1: Seabird Biodiversity and Human Activities Jaime A. Ramos, Leonel Pereira, 2022-06-30 Seabirds are global travellers connecting oceans and seas all over the world, and facing multiple threats at local and global scales. Seabirds are long-lived top predators, reflecting changes at lower trophic levels, and are good models to assess ecological changes produced by human societies. Thus, world-wide collaborations are needed to understand seabird ecology and to develop effective conservation measures benefitting both humans and seabird populations. This book provides a modern overview on seabird biodiversity studies: it begins by covering the most up-to-date techniques to study seabirds, and then focus on pragmatic

issues related with interactions between seabirds and humans, the use of seabirds as ecological indicators and conservation of seabirds. It gives an updated insight on all these topics and highlights gaps that need further development for a comprehensive understanding of the relationships between seabirds and human actions. This book covers the response of the seabird research community to a biodiversity crisis aiming to contribute towards environmental sustainability. It should provide inspiration to a wide range of professionals and students, including the much needed world-wide collaboration between research groups and practitioners. In this way seabird research and conservation provide an inspiration for the solution of global issues such as climate change.
