**State of the World 2013** The Worldwatch Institute,2013-04-15 Every day, we are presented with a range of “sustainable” products and activities—from “green” cleaning supplies to carbon offsets—but with so much labeled as “sustainable,” the term has become essentially sustainababble, at best indicating a practice or product slightly less damaging than the conventional alternative. Is it time to abandon the concept altogether, or can we find an accurate way to measure sustainability? If so, how can we achieve it? And if not, how can we best prepare for the coming ecological decline? In the latest edition of Worldwatch Institute's State of the World series, scientists, policy experts, and thought leaders tackle these questions, attempting to restore meaning to sustainability as more than just a marketing tool. In State of the World 2013: Is Sustainability Still Possible?, experts define clear sustainability metrics and examine various policies and perspectives, including geoengineering, corporate transformation, and changes in agricultural policy, that could put us on the path to prosperity without diminishing the well-being of future generations. If these approaches fall short, the final chapters explore ways to prepare for drastic environmental change and resource depletion, such as strengthening democracy and societal resilience, protecting cultural heritage, and dealing with increased conflict and migration flows. State of the World 2013 cuts through the rhetoric surrounding sustainability, offering a broad and realistic look at how close we are to fulfilling it today and which practices and policies will steer us in the right direction. This book will be especially useful for policymakers, environmental nonprofits, and students of environmental studies, sustainability, or economics.

**Demonic Grounds** Katherine McKittrick,2006 In a long overdue contribution to geography and social theory, Katherine McKittrick offers a new and powerful interpretation of black women's geographic thought. In Canada, the Caribbean, and the United States, black women inhabit diasporic locations marked by the legacy of violence and slavery. Analyzing diverse literatures and material geographies, McKittrick reveals how human geographies are a result of racialized connections, and how spaces that are fraught with limitation are underacknowledged but meaningful sites of political opposition. Demonic Grounds moves between past and present, archives and fiction, theory and everyday, to focus on places negotiated by black women during and after the transatlantic slave trade. Specifically, the author addresses the geographic implications of slave auction blocks, Harriet Jacobs's attic, black Canada and New France, as well as the conceptual spaces of feminism and Sylvia Wynter's philosophies. Central to McKittrick's argument are the ways in which black women are not passive recipients of their surroundings and how a sense of place relates to the struggle against domination. Ultimately, McKittrick argues, these complex black geographies are alterable and may provide the opportunity for social and cultural change. Katherine McKittrick is assistant professor of women's studies at Queen's University.

**Environmentalism and Economic Justice** Laura Pulido,1996-02 Ecological causes are championed not only by lobbyists or hikers. While mainstream environmentalism is usually characterized by well-financed, highly structured organizations operating on a national scale, campaigns for environmental justice are often fought by poor or minority communities. Environmentalism and Economic Justice is one of the first books devoted to Chicano environmental issues and is a study of U.S. environmentalism in transition as seen through the contributions of people of color. It elucidates the various forces driving and shaping two important examples of environmental organizing: the 1965-71 pesticide campaign of the United Farm Workers and a grazing conflict between a Hispano cooperative and mainstream environmentalists in northern New Mexico. The UFW example is one of workers highly marginalized by racism, whose struggle--as much for identity as for a union contract--resulted in boycotts of produce at the national level. The case of the grazing cooperative Ganados del Valle, which sought access to land set aside for elk hunting, represents a subaltern group fighting the elitism of natural resource policy in an effort to pursue a pastoral lifestyle. In both instances Pulido details the ways in which racism and economic subordination create subaltern communities, and shows how these groups use available resources to mobilize and improve their social, economic, and environmental conditions. Environmentalism and Economic Justice reveals that the environmental struggles of Chicano communities do not fit the mold of mainstream environmentalism, as they combine economic, identity, and quality-of-life issues. Examination of the forces that create and shape these grassroots movements clearly demonstrates that environmentalism needs to be sensitive to local issues, economically empowering, and respectful of ethnic and cultural diversity.

**Memory and the Built Environment in 20th-Century American Literature** Alice Levick,2021-05-20 From the paving of the Los Angeles River in 1938 and the creation of the G.I. Bill in 1944, to the construction of the Interstate Highway System during the late 1950s and the brownstoning movement of the 1970s, throughout the mid-20th-century the United States saw a wave of changes that had an enduring impact on the development of urban spaces. Focusing on the relationship between processes of demolition and restoration as they have shaped the modern built environment, and the processes by which memory is constructed, hidden, or remade in the literary text, this book explores the ways in which history becomes entangled with the urban space in which it plays out. Alice Levick takes stock of this history, both in the form of its externalised, concretised manifestation and its more symbolic representation, as depicted in the mid-20th-century work of a selection of American writers. Calling upon access to archival material and interviews with New York academics, authors, local historians and urban planners, this book locates Freud's 'Uncanny' in the cracks between the absent and present, invisible and visible, memory and history as they are presented in city narratives, demonstrating both the passage of time and the imposition of 20th-century modernism. With reference to the works of D. J. Waldie, Joan Didion, Hisaye Yamamoto, Raymond Chandler, Marshall Berman, Gil Cuadros, Paule Marshall, L. J. Davis, and Paula Fox, *Memory and the Built Environment in 20th-Century American Literature* unpacks how time becomes visible in Los Angeles, Sacramento, Lakewood, and New York in the decades just before and after the Second World War, questioning how these spaces provide access to the past, in both narrative and spatial forms, and how, at times, this access is blocked.
