Healthy Buildings Joseph G. Allen, John D. Macomber, 2022-10-18 A revised and updated edition of the landmark work the New York Times hailed as “a call to action for every developer, building owner, shareholder, chief executive, manager, teacher, worker and parent to start demanding healthy buildings with cleaner indoor air.” For too long we’ve designed buildings that haven’t focused on the people inside—their health, their ability to work effectively, and what that means for the bottom line. An authoritative introduction to a movement whose vital importance is now all too clear, *Healthy Buildings* breaks down the science and makes a compelling business case for creating healthier offices, schools, and homes. As the COVID-19 crisis brought into sharp focus, indoor spaces can make you sick—or keep you healthy. Fortunately, we now have the know-how and technology to keep people safe indoors. But there is more to securing your office, school, or home than wiping down surfaces. Levels of carbon dioxide, particulates, humidity, pollution, and a toxic soup of volatile organic compounds from everyday products can influence our health in ways people aren’t always aware of. This landmark book, revised and updated with the latest research since the COVID-19 pandemic, lays out a compelling case for more environmentally friendly and less toxic offices, schools, and homes. It features a concise explanation of disease transmission indoors, and provides tips for making buildings the first line of defense. Joe Allen and John Macomber dispel the myth that we can’t have both energy-efficient buildings and good indoor air quality. We can—and must—have both. At the center of the great convergence of green, smart, and safe buildings, healthy buildings are vital to the push for more sustainable urbanization that will shape our future.

The Power of Existing Buildings Robert Sroufe, Craig E. Stevenson, Beth A. Eckenrode, 2019-11-12 In *The Power of Existing Buildings*, academic sustainability expert Robert Sroufe, and construction and building experts Craig Stevenson and Beth Eckenrode, explain how to realize the potential of existing buildings and make them perform like new. This step-by-step guide will help readers to: understand where to start a project; develop financial models and realize costs savings; assemble an expert team; and align goals with numerous sustainability programs. *The Power of Existing Buildings* will challenge you to rethink spaces where people work and play, while determining how existing buildings can save the world. The insights and practical experience of Sroufe, Stevenson, and Eckenrode, along with the project case study examples, provide new insights on investing in existing buildings for building owners, engineers, occupants, architects, and real estate and construction professionals.

Tall Buildings Guy Nordenson, 2003 *The Language of Disenchantment* explores how Protestant ideas about language influenced British colonial attitudes toward Hinduism and proposals for the reform of that tradition. Protestant literalism, mediated by a new textual economy of the printed book, inspired colonial critiques of Indian mythological, ritual, linguistic, and legal traditions. Central to these developments was the transposition of the Christian opposition between monotheism and polytheism or idolatry into the domain of language. Polemics against verbal idolatry - including the elevation of a scriptural canon over heathenish custom, the attack on the personifications of mythological language, and the critique of vain repetitions in prayers and magic spells - previously applied to Catholic and

sectarian practices in Britain were now applied by colonialists to Indian linguistic practices. As a remedy for these diseases of language, the British attempted to standardize and codify Hindu traditions as a step toward both Anglicization and Christianization. The colonial understanding of a perfect language as the fulfillment of the monotheistic ideal echoed earlier Christian myths according to which the Gospel had replaced the obscure discourses of pagan oracles and Jewish ritual. By recovering the historical roots of the British re-ordering of South Asian discourses in Protestantism, Yelle challenges representations of colonialism, and of the modernity that it ushered in, as simply rational or secular.

Building Books Megan Wagner Lloyd, 2018-10-02 Books and blocks bring together two siblings with nothing in common in this story from Megan Wagner Lloyd (*Finding Wild*) and illustrator Brianne Farley (*Secret Tree Fort*). Katie loves to build. She loves the way the blocks click together, the way they crash when they topple to the floor. But most of all, she loves to build something brand-new. Unlike her brother, she hates reading. Owen loves to read. He loves the way the pages rustle when he turns them, the way the paper smells. But most of all, he loves to read something brand-new. But, unlike his sister, he has no interest in building. When their rivalry finally comes to a head, a librarian suggests a solution. Books for Katie to read and books for Owen to shelve. Can they learn to appreciate their siblings hobbies and build something together?

Buildings of Iowa David Gebhard, Gerald Mansheim, 1993 In *Buildings of Iowa*, David Gebhard and Gerald Mansheim trace Iowa's architectural history from the earliest Native American influences to the present. Divided into five regional areas--Mississippi River East, Mississippi River West, and the Central, South, and North regions--the book's entries within each area are presented on a town-by-town basis to include the full array of Iowa's architectural offerings in various styles. Whether discussing farm houses, barns, and silos or churches, schools, courthouses, and libraries, the volume shows how a unity of rural and urban is effectively mirrored in Iowa's buildings.

How Buildings Learn Stewart Brand, 1995-10-01 Buildings have often been studied whole in space, but never before have they been studied whole in time. *How Buildings Learn* is a masterful new synthesis that proposes that buildings adapt best when constantly refined and reshaped by their occupants, and that architects can mature from being artists of space to becoming artists of time. From the connected farmhouses of New England to I.M. Pei's Media Lab, from satisficing to form follows funding, from the evolution of bungalows to the invention of Santa Fe Style, from Low Road military surplus buildings to a High Road English classic like Chatsworth--this is a far-ranging survey of unexplored essential territory. More than any other human artifacts, buildings improve with time--if they're allowed to. *How Buildings Learn* shows how to work with time rather than against it.

Amazing Buildings Paolo Donati, Philip Wilkinson, Studio Illibill, 1993 Provides the reader with glimpses inside twenty-one famous buildings from around the world.

A case study section highlights the latest, the most innovative, the greenest and the most inspirational tall buildings being constructed today. A team of over fifty experts in all aspects of building tall have contributed to the making of the *Tall Buildings Reference Book*, creating an unparalleled source of information and inspiration for architects, engineers and developers.

Integrated Buildings Leonard R. Bachman, 2003 An anatomical study of building systems integration with guidelines for practical applications Through a systems approach to buildings, *Integrated Buildings: The Systems Basis of Architecture* details the practice of integration to bridge the gap between the design intentions and technical demands of building projects. Analytic methods are introduced that illustrate the value, benefit, and application of systems integration, as well as guidelines for selecting technical systems in the conceptual, schematic, and design development stages of projects. Landmark structures such as Eero Saarinen's John Deere Headquarters, Renzo Piano's Kansai International Airport, Glenn Murcutt's Magney House, and Richard Rogers's Lloyd's of London headquarters are presented as part of an extensive collection of case studies organized into seven categories: Laboratories Offices Pavilions Green Architecture High Tech Architecture Airport Terminals Residential Architecture Advanced material is provided on methods of integration, including an overview of integration topics, the systems basis of architecture, and the integration potential of various building systems. An expanded case study of Ibsen Nelsen's design for the Pacific Museum of Flight is used to demonstrate case study methods for tracing integration through any work of architecture. Visually enhanced with more than 300 illustrations, diagrams, and photographs, *Integrated Buildings*:

The Systems Basis of Architecture is a valuable reference guide for architecture and civil engineering students, as well as architects, engineers, and other professionals in the construction industry.

Buildings Kenneth S. Brown, 2013-06-29 For years I have heard about buildings and their applications to group theory. I finally decided to try to learn something about the subject by teaching a graduate course on it at Cornell University in Spring 1987. This book is based on the notes from that course. The course started from scratch and proceeded at a leisurely pace. The book therefore does not get very far. Indeed, the definition of the term building doesn't even appear until Chapter IV. My hope, however, is that the book gets far enough to enable the reader to tackle the literature on buildings, some of which can seem very forbidding. Most of the results in this book are due to J. Tits, who originated the theory of buildings. The main exceptions are Chapter I (which presents some classical material), Chapter VI (which presents joint work of F. Bruhat and Tits), and Chapter VII (which surveys some applications, due to various people). It has been a pleasure studying Tits's work; I only hope my exposition does it justice.

Broken Buildings, Busted Budgets Barry B. LePatner, 2008-09-15 Across the nation, construction projects large and small—from hospitals to schools to simple home improvements—are spiraling out of control. Delays and cost overruns have come to seem “normal,” even as they drain our wallets and send our blood pressure skyrocketing. In *Broken Buildings, Busted Budgets*, prominent construction attorney Barry B. LePatner builds a powerful case for change in America's sole remaining “mom and pop” industry—an industry that consumes \$1.23 trillion and wastes at least \$120 billion each year. With three decades of experience representing clients that include eminent architects and engineers, as well as corporations, institutions, and developers, LePatner has firsthand knowledge of the bad management, ineffective supervision, and insufficient investment in technology that plagues the risk-averse construction industry. In an engaging and direct style, he here pinpoints the issues that underlie the industry's woes while providing practical tips for anyone in the business of building, including advice on the precise language owners should use during contract negotiations. Armed with *Broken Buildings, Busted Budgets*, everyone involved in the purchase or renovation of a building or any structure—from homeowners seeking to remodel to civic developers embarking on large-scale projects—has the information they need to change this antiquated industry, one project at a time. “LePatner describes what is wrong with the current system and suggests ways that architects can help—by retaking their rightful place as master builders.”—Fred A. Bernstein, *Architect Magazine* “Every now and then, a major construction project is completed on time and on budget. Everyone is amazed. . . . Barry LePatner thinks this exception should become the rule. . . . A swift kick to the construction industry.”—James R. Hagerty, *Wall Street Journal*

Five Hundred Buildings of New York Bill Harris, 2011-12-15 Five hundred stunning duotone photographs showcase the finest, most majestic, and interesting examples of architecture in one of the world's most beloved

cities The greatest buildings, monuments, and structures of New York come to life in these inspiring, neighborhood-by-neighborhood photographic tours. Each building is featured in a rich, fine-resolution duotone photograph. Information including the building's name, its address and location, and year of completion or renovation is included underneath the image. A brief description of each building, which highlights its distinctive features and places it in historical context, is included at the back of the book.

Paradise Valley, Nevada Howard W. Marshall, 1995 Stonemasons from the Alpine valleys of northwestern Italy shaped the architectural face of Paradise Valley in northern Nevada in the 1860s and 1870s. Drawing on their own distinctive skills, they constructed the constellation of granite and sandstone buildings that are the region's most visible landmarks. Marshall's analysis of this architectural legacy, illustrated with 229 photographs and 70 line drawings, is not only a valuable resource for scholars in vernacular architecture, folklore, and cultural geography, but also a verbal and visual treat for all who love the American West.

Source Book of American Architecture George Everard Kidder Smith, 1996 Scorched Earth is the first book to chronicle the effects of chemical warfare on the Vietnamese people and their environment, where, even today, more than 3 million people—including 500,000 children—are sick and dying from birth defects, cancer, and other illnesses that can be directly traced to Agent Orange/dioxin exposure. Weaving first-person accounts with original research, Vietnam War scholar Fred A. Wilcox examines long-term consequences for future generations, laying bare the ongoing monumental tragedy in Vietnam, and calls for the United States government to finally admit its role in chemical warfare in Vietnam. Wilcox also warns readers that unless we stop poisoning our air, food, and water supplies, the cancer epidemic in the United States and other countries will only worsen, and he urgently demands the chemical manufacturers of Agent Orange to compensate the victims of their greed and to stop using the Earth's rivers, lakes, and oceans as toxic waste dumps. Vietnam has chosen August 10—the day that the US began spraying Agent Orange on Vietnam—as Agent Orange Day, to commemorate all its citizens who were affected by the deadly chemical. Scorched Earth will be released upon the third anniversary of this day, in honor of all those whose families have suffered, and continue to suffer, from this tragedy.

Moisture Control Handbook Joseph Lstiburek, John Carmody, 1996-01-15 In the climate-controlled buildings of today, moisture problems affect not only the useable life expectancy of the structure, but the comfort and health of the occupants. This reference is the first to apply up-to-date moisture control and treatment techniques in a problem/solution format. Opening with an introductory explanation of the nature and causes of mold, mildew, and condensation, the book gives specific advice on heated, cooled, and combination environments, plus a short course in the dynamics of moisture movement within buildings. Other invaluable coverage includes: * clear, detailed recommended practices for all United States climates * practices for cooling as well as heating climates (often, heating climate solutions are applied in cooling climates, where problems and solutions are completely different) * an overall, systematic view of moisture problems—including how mechanical systems and occupant lifestyles can create and also resolve moisture problems * actual case studies of buildings with moisture problems that illustrate the principles and practices presented in the book This

detailed, no-nonsense exploration of moisture cause and effect--as well as its protection and remediation--will expand readers' knowledge on this crucial subject. *Moisture Control Handbook* will be welcomed by building contractors, architects, mechanical engineers, building science researchers, building product manufacturers, homeowners, and small commercial building owners.
