Let's Sort by Size Lauren Coss,2014-08-01 This Level 2 guided reader teaches how to classify objects by size and sort them into categories. Students will develop word recognition and reading skills while learning how to identify and sort objects by one of their key attributes, size.

Sort It by Color Emmett Alexander,2015-07-15 Learning to identify colors is an essential skill in the early elementary classroom. Learning to sort by color takes this aptitude one step further. Through accessible text and helpful photographs, beginning readers will be able to see familiar objects, such as toys and crayons, both mixed up and sorted into their favorite colors. They'll be able to demonstrate their mastery of the concept by this inviting book's end.

The Big Sort Bill Bishop,2009-05-11 The award-winning journalist reveals the untold story of why America is so culturally and politically divided in this groundbreaking book. Armed with startling demographic data, Bill Bishop demonstrates how Americans have spent decades sorting themselves into alarmingly homogeneous communities—not by region or by state, but by city and neighborhood. With ever-increasing specificity, we choose the communities and media that are compatible with our lifestyles and beliefs. The result is a country that has become so ideologically inbred that people don't know and can't understand those who live just a few miles away. In *The Big Sort*, Bishop explores how this phenomenon came to be, and its dire implications for our country. He begins with stories about how we live today and then draws on history, economics, and our changing political landscape to create one of the most compelling big-picture accounts of America in recent memory.

Sort It by Size Emmett Alexander,2015-07-15 Small and large, short and tall, little and big, these are all words that help us describe size. This math concepts volume doesn't just tell; it shows early learners the difference between concepts, introduces

them to synonyms, and helps them learn to sort a group according to size. Classification is an important concept for the early elementary mathematics student, but the text and photographs in this book, including dogs, fish, and birds, make it fun!

Sort It by Weight Nicholas O'Hara,2015-07-15 Weight is an important concept in the elementary math classroom as is learning how to sort and classify objects. This colorful book uses familiar objects to exhibit the differences between the adjectives heavy and light and how objects that match these descriptions can be sorted from one another. After reviewing the concepts, readers can demonstrate their understanding at the conclusion of the book and apply their knowledge to situations outside the classroom, too.

Sort it Out! Barbara Mariconda,2008-01-01 In rhyming text, Pack the Packrat sorts his collection of trinkets in a variety of ways.

Sort It by Sound Nicholas O'Hara,2015-07-15 People sort and classify using several kinds of categories, including sound. Readers of this accessible book will consider what's loud and what's quiet in the world around them. They'll discover some things, like music and people, can be loud or quiet. Sorting one from another is perfectly illustrated with carefully chosen photographs throughout this inviting book.

Sort It by Texture Nicholas O'Hara,2015-07-15 Eww, that feels gross! Young learners love learning about texture up close. This accessible book enables readers to imagine how objects would feel that might not be available in the classroom, such as an alligator! Smooth, bumpy, dry, sticky, hard, and soft are just some of the adjectives introduced in this valuable volume. The text and photographs demonstrate objects that illustrate each adjective as well as how to sort objects of a certain texture from a mixed group.

The Works of Henrik Ibsen Henrik Ibsen, 1911

Sorting Things Out Geoffrey C. Bowker, Susan Leigh Star, 2000-08-25 A revealing and surprising look at how classification systems can shape both worldviews and social interactions. What do a seventeenth-century mortality table (whose causes of death include fainted in a bath, frightened, and itch); the identification of South Africans during apartheid as European, Asian, colored, or black; and the separation of machine- from hand-washables have in common? All are examples of classification—the scaffolding of information infrastructures. In *Sorting Things Out*, Geoffrey C. Bowker and Susan Leigh Star explore the role of categories and standards in shaping the modern world. In a clear and lively style, they investigate a variety of classification systems, including the International Classification of Diseases, the Nursing Interventions Classification, race classification under apartheid in South Africa, and the classification of viruses and of tuberculosis. The authors emphasize the role of invisibility in the process by which classification orders human interaction. They examine how categories are made and kept invisible, and how people can change this invisibility when necessary. They also explore systems of classification as part of the built information environment. Much as an urban historian would review highway permits and zoning decisions to tell a city's story, the authors review archives of classification design to understand how decisions have been made. *Sorting Things Out* has a moral agenda, for each standard and category valorizes some point of view and silences another. Standards and classifications produce advantage or suffering. Jobs are made and lost; some regions benefit at the expense of others. How these choices are made and how we think about that process are at the moral and political core of this work. The book is an important empirical source for understanding the building of information infrastructures.

DESPERATE CREED Alex Kava, 2019-07-31 A TRAILBLAZER

IN THE K-9 FICTION GENRE, Kava creates a “dynamic between Ryder and his canines that reveals a world rarely shared in fiction and perhaps nowhere presented more effectively than in this series.” —Phil Jason, Florida Weekly Award-winning author, Alex Kava pulls readers into the middle of the storm and has them gasping for air even as they turn the next page. —A STORM IS COMING— In Alabama: A deadly outbreak of tornadoes sends K9 handlers, Ryder Creed and Jason Seaver with their scent dogs, Grace and Scout to search for survivors. As storms intensify and Ryder and Jason race against time to save victims, they end up racing to save themselves. —NOT EVERYONE’S STORM IS THE SAME— In Chicago: Francine “Frankie” Russo is irritated when her young co-worker calls at 5:00 am for a video-chat and catches her in only a towel. She’s so annoyed with Tyler Gates that she’s barely paying attention when two men confront him on the street. In a matter of seconds, Frankie witnesses Tyler’s murder. Then the killers pick up the phone. And suddenly, they know what Frankie looks like, who she is, where she works and lives. She knows absolutely nothing about them. But one thing’s for certain—they’re coming for her next. —WHEN THE STORM HITS— Frankie calls the only people she knows can help: her childhood friend, Hannah Washington and Hannah’s business partner, Ryder Creed. Hannah tells her to “come on home,” and she arranges a meeting for Frankie to meet with FBI agent Maggie O’Dell. Meanwhile in the Florida Panhandle: Creed’s sister, Brodie is dealing with her own storm. She’s realizing that after sixteen years of captivity, surviving was only the first step. With the killers hot on her trail, Frankie races to meet Maggie. But she has no idea that she’s driving straight into the grasp of another killer—a monster storm system. She and Maggie will need Ryder and Jason’s help, but no one is safe from the devastation. And by the time the sky clears, none of them will ever be the same. WHO WILL BE STRONG ENOUGH TO SURVIVE? In Desperate Creed Alex Kava, once again, delivers

her signature trademark combining “well-developed characters” (Publishers Weekly) with “a highly original plot” (Suspense Magazine) then packing it with “twists, turns and suspense galore” (Modern Dog). “Did I mention the dogs? They and their human partners are simply the heart and soul of everything.” (Florida Weekly)

Let's Sort Shapes Lauren Coss, 2014-08-01 This Level 2 guided reader teaches how to classify objects by shape and sort them into categories. Students will develop word recognition and reading skills while learning how to identify, compare, and describe shapes and sort them by their key attributes.

Algorithms in a Nutshell George T. Heineman, Gary

Pollice, Stanley Selkow, 2008-10-14 Creating robust software requires the use of efficient algorithms, but programmers seldom think about them until a problem occurs. *Algorithms in a Nutshell* describes a large number of existing algorithms for solving a variety of problems, and helps you select and implement the right algorithm for your needs -- with just enough math to let you understand and analyze algorithm performance. With its focus on application, rather than theory, this book provides efficient code solutions in several programming languages that you can easily adapt to a specific project. Each major algorithm is presented in the style of a design pattern that includes information to help you understand why and when the algorithm is appropriate. With this book, you will: Solve a particular coding problem or improve on the performance of an existing solution Quickly locate algorithms that relate to the problems you want to solve, and determine why a particular algorithm is the right one to use Get algorithmic solutions in C, C++, Java, and Ruby with implementation tips Learn the expected performance of an algorithm, and the conditions it needs to perform at its best Discover the impact that

similar design decisions have on different algorithms Learn advanced data structures to improve the efficiency of algorithms With Algorithms in a Nutshell, you'll learn how to improve the performance of key algorithms essential for the success of your software applications.
