Bring Your Own Device (BYOD) to Work Bob Hayes, Kathleen Kotwica, 2013-03-25 Bring Your Own Device (BYOD) to Work examines the emerging BYOD (Bring Your Own Device to work) trend in corporate IT. BYOD is the practice of employees bringing personally-owned mobile devices (e.g., smartphones, tablets, laptops) to the workplace, and using those devices to access company resources such as email, file servers, and databases. BYOD presents unique challenges in data privacy, confidentiality, security, productivity, and acceptable use that must be met proactively by information security professionals. This report provides solid background on the practice, original research on its pros and cons, and actionable recommendations for implementing a BYOD program. Successful programs are cross-functional efforts including information technology, human resources, finance, legal, security, and business operating teams. This report is a valuable resource to any security professional considering a BYOD program. Bring Your Own Device (BYOD) to Work is a part of Elsevier's Security Executive Council Risk Management Portfolio, a collection of real world solutions and how-to guidelines that equip executives, practitioners, and educators with proven information for successful security and risk management programs. Presents research data associated with BYOD and productivity in the workplace Describes BYOD challenges, risks, and liabilities Makes recommendations for the components a clearly communicated BYOD program should contain

Bring Your Own Devices (BYOD) Survival Guide Jessica Keyes, 2016-04-19 Where end-users once queued up to ask the IT department for permission to buy a new computer or a new version of software, they are now bypassing IT altogether and buying it on

their own. From laptops and smartphones to iPads and virtually unlimited software apps, end-users have tasted their freedom and love it. IT will simply never be the same. Bri

Mobile Access Safety Dominique Assing, Stéphane Calé, 2013-02-05

Over recent years, the amount of mobile equipment that needs to be connected to corporate networks remotely (smartphones, laptops, etc.) has increased rapidly. Innovative development perspectives and new tendencies such as BYOD (bring your own device) are exposing business information systems more than ever to various compromising threats. The safety control of remote access has become a strategic issue for all companies. This book reviews all the threats weighing on these remote access points, as well as the existing standards and specific countermeasures to protect companies, from both the technical and organizational points of view. It also reminds us that the organization of safety is a key element in the implementation of an efficient system of countermeasures as well. The authors also discuss the novelty of BYOD, its dangers and how to face them. Contents 1. An Ordinary Day in the Life of Mr. Rowley, or the Dangers of Virtualization and Mobility. 2. Threats and Attacks. 3. Technological Countermeasures. 4. Technological Countermeasures for Remote Access. 5. What Should Have Been Done to Make Sure Mr Rowley's Day Really Was Ordinary. About the Authors Dominique Assing is a senior security consultant and a specialist in the management and security of information systems in the banking and stock markets sectors. As a security architect and risk manager, he has made information security his field of expertise. Stéphane Calé is security manager (CISSP) for a major automobile manufacturer and has more than 15 years of experience of putting in place telecommunications and security infrastructures in an international context.

The Implementation Challenges to Bring Your Own Device Concept (BYOD) in Relation to Information Assurance and Security
Janvan Munyoki, 2023-03-07 Doctoral Thesis / Dissertation from the year 2016 in the subject Computer Science - Commercial Information Technology, grade: 3.923, Capella University (School of Technology), course: PHD in Information Technology, language: English, abstract: Research conducted by Tech Pro (2014) indicated that the Bring Your Own Device (BYOD) concept is gaining momentum, with 74% of organizations already having some BYOD program or planning to implement one. While BYOD offers several benefits, it also presents challenges that concern information technology leaders and information security managers. This correlational study used the systems theory framework to examine the relationship between information security managers' intentions, perceptions of security, and compliance regarding BYOD implementation. Participants of the study consisted of information security managers in Kenya who had obtained the Certified Information Systems Manager certification. Data was collected from 54 information security managers through a survey instrument. The survey instrument integrated three other instruments with proven reliability developed by other researchers. Data was analyzed using a multiple regression analysis to test for a relationship between the variables of the study (security, compliance, and intent to implement BYOD). The multiple regression conducted in this study was insignificant, indicating a relationship did not exist between the study's variables ($F(2, 86) = 0.33, p = .718, R^2 = .00$). A significant negative relationship was found between security and compliance, indicating a weakly negative correlation ($r = -.26, p = .016$). Using the results from the study, information technology leaders may be able to develop strategies from which to implement BYOD

successfully. Implications for social change include increased knowledge of securing personal devices for employees and consumers in general and reduction in costs associated with security and data breaches.

BYOD for Healthcare Jessica Keyes, 2014-04-23 With 70 percent of organizations already adopting bring your own device (BYOD) and Gartner expecting this number to increase to 90 percent by the end of 2014, it is not a question of if, or when, it's a question of will you be ready. BYOD for Healthcare provides authoritative guidance to help you thrive during the healthcare BYOD (hBYOD) revolution. Jessica

Keyes, president of New Art Technologies, Inc., professor at the University of Liverpool, and former managing director of R&D for the New York Stock Exchange, supplies an understanding of these new end users, their demands, and the strategic and tactical ramifications of these demands. Maintaining a focus on the healthcare industry, the book considers the broad range of technical considerations, including selection, connectivity, training, support, and security. It examines the integration of BYOD to current health IT, legal, regulatory, and ethical issues. It also covers risk assessment and mitigation strategies for an hBYOD environment that are in line with medical laws, regulations, ethics, and the HIPAA and HITECH Acts. The text discusses BYOD security and provides time-saving guidance on how to configure your hBYOD environment. It also considers how BYOD impacts resource management, certification of EMR/EHR software, health informatics, and health information exchange. The book covers content and data management, risk assessment, and performance measurement and management. It includes a set of Quick Start guides with tips for assessing costs, cloud integration, and legal issues. It also contains a robust appendix with information on everything from security settings for Apple iOS devices to a sample employee mobile device agreement.

User's Guide to Telework and Bring Your Own Device (BYOD) Security Murugiah Souppaya, 2016 Many people telework, and they use a variety of devices, such as desktop and laptop computers, smartphones, and tablets, to read and send email, access websites, review and edit documents, and perform many other tasks. La sécurité des accès mobiles : au-delà du BYOD ASSING

Dominique,CALE Stéphane,2012-09-18 Au cours des dernières années, les équipements mobiles permettant de se connecter à distance au réseau d'entreprise (smartphones, ordinateurs ultraportables...) ont connu une croissance fulgurante. Les perspectives futures de développement et les nouvelles pratiques comme le BYOD (bring your own device) exposent plus que jamais le système d'information d'entreprise à des menaces d'origines diverses. La maîtrise de la sécurité des accès mobiles devient un enjeu stratégique pour l'entreprise. Cet ouvrage didactique présente un panorama des risques pesant sur les accès à distance. L'exemple concret d'un utilisateur lambda et des différentes attaques subies lors d'une « journée ordinaire » sensibilise le lecteur aux défenses standard et spécifiques qui existent pour le protéger. Le domaine de la sécurité n'étant pas uniquement lié aux seuls aspects techniques, le lien entre ces différentes recommandations et l'une des principales approches méthodologiques en la matière (ISO/IEC 27002) est également exposé.

Security and Auditing of Smart Devices Sajay Rai,Philip Chukwuma,Richard Cozart,2016-11-17 Most organizations have been caught off-guard with the proliferation of smart devices. The IT organization was comfortable supporting the Blackberry due to its ease of implementation and maintenance. But the use of Android and iOS smart devices have created a maintenance nightmare not only for the IT organization but for the IT auditors as well. This book will serve as a guide to IT and Audit professionals on how to manage, secure and audit smart device. It provides guidance on the handling of corporate

devices and the Bring Your Own Devices (BYOD) smart devices.

Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. Overcoming Byod Implementation Challenges Toward a Management Framework. a Design Theory. Markus Heidenreich, 2014-04 Bachelor Thesis from the year 2013 in the subject Computer Science - Commercial Information Technology, grade: 1,0, University of Duisburg-Essen (SITM), language: English, abstract: BYOD is the abbreviation for Bring Your Own Device. BYOD stands for the global trend in which employees of organizations are using their personally owned devices for the purpose of accomplishing work-related tasks. In practice, BYOD is a major concern for an organization's security and causes a number of

challenges when it is introduced officially into organizations. There are also positive aspects of this trend like increased employee productivity. In literature, there are a number of recommendations concerning the introduction of BYOD - but unfortunately the focus is on particular aspects only. The aim of this thesis is to introduce an overall management framework for the introduction of BYOD which guides organizations to implement BYOD successfully and decrease the security issues at the same time. The research starts with a review of existing literature such as magazines, practitioner papers and study reports in order to identify management frameworks in regard to BYOD. As there is no overall management framework for the introduction of BYOD, the goal of this thesis is aiming at introducing one. The review resulted in a design theory in which meta-requirements are derived from the implementation challenges of BYOD which lead to the design principles and the overall management framework. The research process includes interviews with BYOD experts. The interviews consist each of an explorative and an evaluative part. Finally, this thesis contributes to the knowledge base of BYOD and gives practitioners a compendium for the introduction of BYOD.

Recommendations and Privacy Requirements for a Bring-Your-Own-Device User Policy and Agreement Naval Postgraduate Naval Postgraduate School, 2015-05-14 The purpose of a bring-your-own-device (BYOD) program is to increase productivity as it allows individuals to access and manipulate data from non-traditional workplaces to support mission requirements. The United States Marine Corps (USMC) has started a pilot BYOD program, but a user policy for the USMC BYOD program has not yet been identified, despite the driving force that policy has on final implementation and

potential acceptance. Therefore, this thesis answers the question, is it possible to develop a BYOD user policy for the USMC that minimizes risk for all parties while allowing for the intended flexibility? Three case studies were conducted on organizations that have implemented BYOD programs, comparing user policies and best practices to mitigate risks and address user privacy concerns. The case studies were also compared with governing Department of Defense instructions and National Institute of Standards and Technology guidance to identify a baseline of applicable security controls to formulate a viable user policy and agreement to support USMC security requirements. This thesis found that a clearly articulated user agreement tailored to the USMC's technological solution can be written to support the successful implementation of its BYOD program to ensure the benefits outweigh the potential risks.
