Mobile Access Safety Dominique Assing,Stéphane Calé,2013-02-05 Over recent years, the amount of mobile equipment that needs to be connected to corporate networks remotely (smartphones, laptops, etc.) has increased rapidly. Innovative development perspectives and new tendencies such as BYOD (bring your own device) are exposing business information systems more than ever to various compromising threats. The safety control of remote access has become a strategic issue for all companies. This book reviews all the threats weighing on these remote access points, as well as the existing standards and specific countermeasures to protect companies, from both the technical and organizational points of view. It also reminds us that the organization of safety is a key element in the implementation of an efficient system of countermeasures as well. The authors also discuss the novelty of BYOD, its dangers and how to face them. Contents 1. An Ordinary Day in the Life of Mr. Rowley, or the Dangers of Virtualization and Mobility. 2.Threats and Attacks. 3. Technological Countermeasures. 4. Technological Countermeasures for Remote Access. 5. What Should Have Been Done to Make Sure Mr Rowley's Day Really Was Ordinary. About the Authors Dominique Assing is a senior security consultant and a specialist in the management and security of information systems in the banking and stock markets sectors. As a security architect and risk manager, he has made information security his field of expertise. Stephane Calé is security manager (CISSP) for a major automobile manufacturer and has more than 15 years of experience of putting in place telecommunications and security infrastructures in an international context.

The Implementation Challenges to Bring Your Own Device Concept (BYOD) in Relation to Information Assurance and Security Janvan Munyoki,2023-03-07 Doctoral Thesis / Dissertation from the year 2016 in the subject Computer Science - Commercial Information Technology, grade: 3.923, Capella University (School of Technology), course: PHD in Information Technology, language: English, abstract: Research conducted by Tech Pro (2014) indicated that the Bring Your Own Device (BYOD) concept is gaining momentum, with 74% of organizations already having some BYOD program or planning to implement one. While BYOD offers several benefits, it also presents challenges that concern information technology leaders and information security managers. This correlational study used the systems theory framework to examine the relationship between information security managers' intentions, perceptions of security, and compliance regarding BYOD implementation. Participants of the study consisted of information security managers in Kenya who had obtained the Certified Information Systems Manager certification. Data was collected from 54 information security managers through a survey instrument. The survey instrument integrated three other instruments with proven reliability developed by other researchers. Data was analyzed using a multiple regression analysis to test for a relationship between the variables of the study (security, compliance, and intent to implement BYOD). The multiple regression conducted in this study was insignificant, indicating a relationship did not exist between the study's variables ($F(2, 86) = 0.33$, $p = .718$, $R^2 = .00$). A significant negative relationship was found between security and compliance, indicating a weakly negative correlation ($r = -.26$, $p = .016$). Using the results from the study, information technology leaders may be able to develop strategies from which to implement BYOD successfully. Implications for social change include increased knowledge of securing personal devices for employees and consumers in general and reduction in costs associated with security and data breaches.

Security and Auditing of Smart Devices Sajay Rai,Philip Chukwuma,Richard Cozart,2016-11-17 Most organizations have been caught off-guard with the proliferation of smart devices. The IT organization was comfortable supporting the Blackberry due to its ease of implementation and maintenance. But the use of Android and iOS smart devices have created a maintenance nightmare not only for the IT organization but for the IT auditors as well. This book will serve as a guide to IT and Audit professionals on how to manage, secure and audit smart device. It provides guidance on the handling of corporate devices and the Bring Your Own Devices (BYOD) smart devices.

User's Guide to Telework and Bring Your Own Device (BYOD) Security National Institute National Institute of Standards and Technology,2016-07-29 NIST SP 800-114 Rev 1 July 2016 Many people telework, and they use a variety of devices, such as desktop and laptop computers, smartphones, and tablets, to read and send email, access websites, review and edit documents, and perform many other tasks. Each telework device is controlled by the organization, a third party (such as the organization's contractors, business partners, and vendors), or the teleworker; the latter is known as bring your own device (BYOD). This publication provides recommendations for securing BYOD devices used for telework and remote access, as well as those directly attached to the enterprise's own networks. Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people - and its outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. We publish compact, tightly-bound, full-size books (8 1/2 by 11 inches), with glossy covers. 4th Watch Books is a Service Disabled Veteran-Owned Small Business (SDVOSB), and is not affiliated with the National Institute of Standards and Technology. The Power of Resilience Yossi Sheffi, 2017-03-24 How the best companies prepare for and manage modern vulnerabilities—from cybersecurity risks to climate change: new tools, processes and organizations for developing corporate resilience. A catastrophic earthquake is followed by a tsunami that inundates the coastline, and around the globe manufacturing comes to a standstill. State-of-the-art passenger jets are grounded because of a malfunctioning part. A strike halts shipments through a major port. A new digital device decimates the sales of other brands and sends established firms to the brink of bankruptcy. The interconnectedness of the global economy today means that unexpected events in one corner of the globe can ripple through the world's supply chain and affect customers everywhere. In this book, Yossi Sheffi shows why modern vulnerabilities call for innovative processes and tools for creating and embedding corporate resilience and risk management. Sheffi offers fascinating case studies that illustrate how companies have prepared for, coped with, and come out stronger following disruption—from the actions of Intel after the 2011 Japanese tsunami to the disruption in the “money supply chain” caused by the 2008 financial crisis. Sheffi, author of the widely read *The Resilient Enterprise*, focuses here on deep tier risks as well as corporate responsibility, cybersecurity, long-term disruptions, business continuity planning, emergency operations centers, detection, and systemic disruptions. Supply chain risk management, Sheffi shows, is a balancing act between taking on the risks involved in new products, new markets, and new processes—all crucial for growth—and the resilience created by advanced risk management.

Recommendations and Privacy Requirements for a Bring-Your-Own-Device User Policy and Agreement Naval Postgraduate Naval Postgraduate School,2015-05-14 The purpose of a bring-your-own-device (BYOD) program is to increase productivity as it allows individuals to access and manipulate data from non-traditional workplaces to support mission requirements. The United States Marine Corps (USMC) has started a pilot BYOD program, but a user policy for the USMC BYOD program has not yet been identified, despite the driving force that policy has on final implementation and potential acceptance. Therefore, this thesis answers the question, is it possible to develop a BYOD user policy for the USMC that minimizes risk for all parties while allowing for the intended flexibility? Three case studies were conducted on organizations that have implemented BYOD programs, comparing user policies and best practices to mitigate risks and address user privacy concerns. The case studies were also compared with governing Department of Defense instructions and National Institute of Standards and Technology guidance to identify a baseline of applicable security controls to formulate a viable user policy and agreement to support USMC security requirements. This thesis found that a clearly articulated user agreement tailored to the USMC's technological solution can be written to support the successful implementation of its BYOD program to ensure the benefits outweigh the potential risks.
