*Structure Reports* J. Trotter, 2013-06-29 In the past the aim of Structure Reports has been to present critical reports on all work of crystallographic structural interest, whether it is derived directly from X-ray, electron, or neutron diffraction, or even indirectly from other experiments. The reports were intended to be critical and not mere abstracts, except in some cases when a brief indication of the content of a paper of related interest was included in the form of an abstract. In selecting topics for reporting, the criterion 'of structural interest' was freely interpreted in terms of what was topically interesting. However, the amount of literature covering matters of structural interest became so large that this policy could no longer be followed, and from Volume 28 onwards, critical reports are given only on actual structure determinations. Only in this way was it possible to keep yearly volumes to a fairly uniform and usable size. Starting with Volume 30, Structure Reports is produced in a new format by photo-offset printing from typed manuscript with unjustified lines. At the time when the decision for this change was taken, the cost of setting the manuscript in type was becoming so high as to render the cost of individual subscription prohibitive. At that time automatic typing methods giving justified lines, etc.

The UNESCO Memory of the World Programme Ray Edmondson, Lothar Jordan, Anca Claudia Prodan, 2019-11-11 The volume "The UNESCO Memory of the World Programme: Key Aspects and Recent Developments" responds to the growing interest in the scientific study of the Memory of the World Programme (MoW) and its core concept of documentary heritage, which has received little attention from scholarship so far. This sixth publication in the Heritage Studies Series provides a first collection of differing approaches (including reflected reports, essays, research contributions, and theoretical reflections) for the study of the MoW Programme, offering a basis for follow-up activities. The volume, edited by Ray Edmondson, Lothar Jordan and Anca Claudia Prodan, brings together 21 scholars from around the globe to present aspects deemed crucial for understanding MoW, its development, relevance and potential. The aim is to encourage academic research on MoW and to enhance the understanding of its potential and place within Heritage Studies and beyond.

XSLT Doug Tidwell, 2008-03-15 There's been great anticipation surrounding the release of XSLT 2.0, the new language specification that's critical for converting XML documents into other formats, such as HTML code or a PDF file. The XSLT 2.0 specification is approaching completion at long last, but

unfortunately, version 2.0's delays and complexity have forced developers to rely on the XSLT 1.0 standard longer than they anticipated. Both specifications will be in use during what is likely to be a long transition period. The second edition of XSLT incorporates new material for XSLT 2.0 and expounds on the lessons learned over the last six years of XSLT 1.0 use. Whether you're looking for the latest and greatest in XSLT 1.0 techniques, or is moving on to XSLT 2.0, this new edition of XSLT will address your needs. The book includes plenty of practical, real-world examples to show you how to apply XSLT stylesheets to XML data using either version. You'll get a thorough understanding of XSLT and XPath and their relationship to other web standards, along with recommendations for a honed toolkit in an open platform-neutral, standards-based environment. Author Doug Tidwell starts with the basics: simple stylesheets and methods for setting up transformation engines. Then he works through examples that develop your understanding of the many parts of XSLT, particularly XSLT's template-based approach to transformations. This new edition has been updated to explain XSLT 2.0's many dependencies, notably XML Schema and XPath 2.0.

XML Chong Lip Phang, 2022-10-25 This book walks the reader through all XML-related technologies with examples. **Finite Geometries and Combinatorial Designs** Earl Sidney Kramer,1990 More than eighty participants from all over the world attended an AMS Special Session on Finite Geometries and Combinatorial Designs held in Lincoln, Nebraska, in the fall of 1987. This volume contains the proceedings of that Special Session, in addition to several invited papers. Employing state-of-the-art combinatorial and geometric methods, the papers show significant advances in this area. Topics range over finite geometry, combinatorial designs, their automorphism groups, and related structures. Requiring graduate-level background, this book is intended primarily for researchers in finite geometries and combinatorial designs. However, the interested nonspecialist will find that the book provides an excellent overview of

current activity in these areas.

**Representations** Jerry A. Fodor, 1983 These essays will shape discussion in the philosophy of psychology for years to come. A collection of eleven essays dealing with methodological and empirical issues in cognitive science and in the philosophy of mind, *Representations* convincingly connects philosophical speculation to concrete empirical research. One of the outstanding methodological issues dealt with is the status of functionalism considered as an alternative to behavioristic and physicalistic accounts of mental states and properties. The other issue is the status of reductionism considered as an account of the relation between the psychological and physical sciences. The first chapters present the main lines of argument which have made functionalism the currently favored philosophical approach to ontology of the mental. The outlines of a psychology of propositional attitudes which emerges from consideration of current developments in cognitive science are contained in the remaining essays. Not all of these essays are re-presentations. The new introductory essay seeks to present an overview and gives some detailed proposals about the contribution that functionalism makes to the solutions of problems about intentionality. The concluding essay, also not previously published, is a sustained examination of the relation between theories about the structure of concepts and theories about how they are learned. Finally,

the essay Three cheers for propositional attitudes, a critical examination of some of D. C. Dennett's ideas, has been completely rewritten for this volume. A Bradford Book.

**Revolutions and Continuity in Greek Mathematics** Michalis

Sialaros, 2018-04-23 This volume brings together a number of leading scholars working in the field of ancient Greek mathematics to present their latest research. In their respective area of specialization, all contributors offer stimulating approaches to questions of historical and historiographical 'revolutions' and 'continuity'. Taken together, they provide a powerful lens for evaluating the applicability of Thomas Kuhn's ideas on 'scientific revolutions' to the discipline of ancient Greek mathematics. Besides the latest historiographical studies on 'geometrical algebra' and 'premodern algebra', the reader will find here some papers which offer new insights into the controversial relationship between Greek and pre-Hellenic mathematical practices. Some other contributions place emphasis on the other edge of the historical spectrum, by exploring historical lines of 'continuity' between ancient Greek, Byzantine and post-Hellenic mathematics. The terminology employed by Greek mathematicians, along with various non-textual and material elements, is another topic which some of the essays in the volume explore. Finally, the last three articles focus on a traditionally rich source on ancient Greek mathematics; namely the works of Plato and Aristotle.
