Theatre Models in Paper and Card Robert Burgess,1999 Discover the magical world of toy theatres-- a unique gift idea for family and friends. Children and adults alike will be enchanted by the 10 designs for exquisite miniature theatres-- many of them of the Victorian era. Projects include a Folding Theatre in a Box, a Pop-up Theatre Greeting Card, a Punch and Judy Booth, and a Bali Shadow Theatre-- all made with paper and cardboard and a minimum of special tools or expensive materials. Basic papercraft skills necessary to create these tiny wonders, such as painting, gilding, rubber stamping, and tea staining, are described in detail. All the templates and decorative images needed to make the theatres are found among the many beautiful color photographs and can easily be photocopied.

The Race Card Tara Fickle,2019-11-19 How games have been used to establish and combat Asian American racial stereotypes As Pok  mon Go reshaped our neighborhood geographies and the human flows of our cities, mapping the virtual onto lived realities, so too has gaming and game theory played a role in our contemporary understanding of race and racial formation in the United States. From the Chinese Exclusion Act and Japanese American internment to the model minority myth and the globalization of Asian labor, Tara Fickle shows how games and game theory shaped fictions of race upon which the nation relies. Drawing from a wide range of literary and critical texts, analog and digital games, journalistic accounts, marketing campaigns, and archival material, Fickle illuminates the ways Asian Americans have had to fit the roles, play the game, and follow the rules to be seen as valuable in the US. Exploring key moments in the formation of modern US race relations, The Race Card charts a new course in gaming scholarship by reorienting our focus away from games as vehicles for empowerment that allow people to inhabit new identities, and toward the ways that games are used as instruments of soft power to advance top-down political agendas. Bridging the intellectual divide between the embedded mechanics of video games and more theoretical approaches to gaming rhetoric, Tara Fickle reveals how this intersection allows us to overlook the predominance of game tropes in national culture. The Race Card reveals this relationship as one of deep ideological and historical intimacy: how the games we play have seeped into every aspect of our lives in both monotonous and malevolent ways.

Making Rural Buildings for Model Railways David Wright,2013-04-22 This invaluable, well-illustrated book is essential reading for all those who are interested in developing their modelling skills and creating realistic models of country houses, cottages and farm buildings for their railway layouts. The author encourages and inspires the reader and, moreover, emphasizes that railway modellers can achieve their objectives without purchasing expensive materials. Indeed, all the materials recommended in the book are either recycled or can be obtained quite cheaply. Topics covered include: The materials and equipment required to build models; Modelling methods and construction techniques; Painting, weathering and finishing; Creating a sympathetic setting for your models; Improving kits and 'off-the-shelf' models. The author presents in detail three different rural, scratch-built projects and, in a separate appendix, provides a colour reference guide, thus enabling the modeller to apply the correct colours and shades in order to create authentic and convincing-looking model buildings. An invaluable guide which provides all the information required to create convincing models of rural buildings. Aimed at all those interested in railway modelling whatever their level of ability, and those interested in modelling in general rather than in just railway modelling. Materials and equipment, modelling methods and construction techniques are covered. Superbly illustrated with 320 colour step-by-step photographs and diagrams. David Wright is a professional artist and model maker and provides hands-on experience at railway modelling workshops.

Logic of Mathematics Zofia Adamowicz,Pawel Zbierski,1997-04-01 A thorough, accessible, and rigorous presentation of the central theorems of mathematical logic . . . ideal for advanced students of mathematics, computer science, and logic Logic of Mathematics combines a full-scale introductory course in mathematical logic and model theory with a range of specially selected, more advanced theorems. Using a strict mathematical approach, this is the only book available that contains complete and precise proofs of all of these important theorems: * Gödel's theorems of completeness and incompleteness * The independence of Goodstein's theorem from Peano arithmetic * Tarski's theorem on real closed fields * Matiyasevich's theorem on diophantine formulas Logic of Mathematics also features: * Full coverage of model theoretical topics such as definability, compactness, ultraproducts, realization, and omission of types * Clear, concise explanations of all key concepts, from Boolean algebras to Skolem-Löwenheim constructions and other topics * Carefully chosen exercises for each chapter, plus helpful solution hints At last, here is a refreshingly clear, concise, and mathematically rigorous presentation of the basic concepts of mathematical logic-requiring only a standard familiarity with abstract algebra. Employing a strict mathematical approach that emphasizes relational structures over logical language, this carefully organized text is divided into two parts, which explain the essentials of the subject in specific and straightforward terms. Part I contains a thorough introduction to mathematical logic and model theory-including a full discussion of terms, formulas, and other fundamentals, plus detailed coverage of relational structures and Boolean algebras,

Gödel's completeness theorem, models of Peano arithmetic, and much more. Part II focuses on a number of advanced theorems that are central to the field, such as Gödel's first and second theorems of incompleteness, the independence proof of Goodstein's theorem from Peano arithmetic, Tarski's theorem on real closed fields, and others. No other text contains complete and precise proofs of all of these theorems. With a solid and comprehensive program of exercises and selected solution hints, Logic of Mathematics is ideal for classroom use—the perfect textbook for advanced students of mathematics, computer science, and logic.
