Simple Lie Algebras Over Fields of Positive Characteristic: Structure theory Helmut Strade,2004 The problem of classifying the finite-dimensional simple Lie algebras over fields of characteristic p > 0 is a long-standing one. Work on this question during the last 45 years has been directed by the Kostrikin-Shafarevich Conjecture of 1966, which states that over an algebraically closed field of characteristic p > 5 a finite-dimensional restricted simple Lie algebra is classical or of Cartan type. This conjecture was proved for p > 7 by Block and Wilson in 1988. The generalization of the Kostrikin-Shafarevich Conjecture for the general case of not necessarily restricted Lie algebras and p > 7 was announced in 1991 by Strade and Wilson and eventually proved by Strade in 1998. The final Block-Wilson-Strade-Premet Classification Theorem is a landmark result of modern mathematics and can be formulated as follows: Every finite-dimensional simple Lie algebra over an algebraically closed field of characteristic p > 3 is of classical, Cartan, or Melikian type. In the three-volume book, the author is assembling the proof of the Classification Theorem with explanations and references. The goal is a state-of-the-art account on the structure and classification theory of Lie algebras over fields of positive characteristic leading to the forefront of current research in this field. This first volume is devoted to preparing the ground for the classification work to be performed in the second and third volume. The concise presentation of the general theory underlying the subject matter and the presentation of classification results on a subclass of the simple Lie algebras for all odd primesmake this volume an invaluable source and reference for all research mathematicians and advanced graduate students in albegra.

Characteristics Finite Element Methods in Computational Fluid Dynamics Joe Iannelli,2006-09-24 This book details a systematic characteristics-based finite element procedure to investigate incompressible, free-surface and compressible flows. Several sections derive the Fluid Dynamics equations from first thermo-mechanics principles and develop this multi-dimensional and infinite-directional upstream procedure by combining a finite element discretization with an implicit non-linearly stable Runge-Kutta time integration for the numerical solution of the Euler and Navier Stokes equations.

William Shakespeare Complete Works Second Edition William Shakespeare,2022-06-07 The newly revised, wonderfully authoritative First Folio of Shakespeare's Complete Works, edited by acclaimed Shakespearean scholars Jonathan Bate and Eric Rasmussen and endorsed by the world-famous Royal Shakespeare Company Combining cutting-edge textual editing, superb annotations and commentary, a readable design, and bonus features for students, theater professionals, and general readers, this landmark edition sets a new standard in Shakespearean literature for the twenty-first century and features 48 pages of new material. Edited by a brilliant team of "younger generation" Shakespearean scholars from the First Folio originally assembled by Shakespeare's own acting company, this edition of the "Complete Works" corrects centuries of errors and textual variations that have evolved since the book's publication in 1623, and includes modern glossaries designed for twenty-first-century readers and new editorial stage directions clearly distinguished from Folio directions.

Gymnastics of the Mind Raffaella Cribiore,2005-02-13 This book is at once a thorough study of the educational system for the Greeks of Hellenistic and Roman Egypt, and a window to the vast panorama of educational practices in the Greco-Roman world. It describes how people learned, taught, and practiced literate skills, how schools functioned, and what the curriculum comprised. Raffaella Cribiore draws on over 400 papyri, ostraca (sherds of pottery or slices of limestone), and tablets that feature everything from exercises involving letters of the alphabet through rhetorical compositions that represented the work of advanced students. The exceptional wealth of surviving source material renders Egypt an ideal space of reference. The book makes excursions beyond Egypt as well, particularly in the Greek East, by examining the letters of the Antiochene Libanius that are concerned with education. The first part explores the conditions for teaching and learning, and the roles of teachers, parents, and students in education; the second vividly describes the progression from elementary to advanced education. Cribiore examines not only school exercises but also books and commentaries employed in education--an uncharted area of research. This allows the most comprehensive evaluation thus far of the three main stages of a liberal education, from the elementary teacher to the grammarian to the rhetorician. Also addressed, in unprecedented detail, are female education and the role of families in education. Gymnastics of the Mind will be an indispensable resource to students and scholars of the ancient world and of the history of education.
