Hurricane Camille Hearn, Philip D., 2009-10-20 Nominated Best Nonfiction Book for 2004 -- Mississippi Institute of Arts and Letters On August 17, 1969, Hurricane Camille roared out of the Gulf of Mexico and smashed into Mississippi's twenty-six miles of coastline. Winds were clocked at more than 200 miles per hour, tidal waves surged to nearly 35 feet, and the barometric pressure of 26.85 inches neared an all-time low. Survivors of the killer storm date events as BC and AC--Before Camille and After Camille. The history of Hurricane Camille is told here through the eyes and the memories of those who survived the traumatic winds and tides. Their firsthand accounts, compiled a decade after the storm and archived at the University of Southern Mississippi, form the core of this book. Property damage exceeded \$1.5 billion, \$48.6 billion in today's dollars. Fashionable beachfront homes, holiday hotels, marinas, night clubs, and souvenir shops were devastated. The death toll in the state's three coastal counties--Harrison, Hancock, and Jackson--reached 131, with another 41 persons never found. The rampaging storm then moved north through Tennessee, Kentucky, West Virginia, and Virginia and sparked flash floods that killed more than 100 in Virginia before moving into the Atlantic. Camille is one of only three Category 5 hurricanes ever to hit the U.S. mainland. Along the Coast today, vacant lots, slabs of concrete, and mysterious staircases and driveways leading to nowhere are Camille's eerie reminders. The ruins that remain, however, are overshadowed by the dazzle and fun at the dozen casinos and high-rise hotels that dominate the modern beachfront. Once more the seashore is thriving. Rambling homes, the neon lights of motels and family restaurants, and the nets and masts of shrimp boats mark the skyline. For the Mississippi Coast, a historic retreat between New Orleans on the west and Mobile on the east--these are the best of times. This gripping story of the Coast's most devastating storm recounts what happened on a terrifying night more than three decades ago. It reminds, too, what can happen again.

The storm surge is caused mainly by the strong winds associated with extratropical storms over nearshore areas.

Island in a Storm Abby Sallenger, 2010-09-07 Presents the story of the 1856 hurricane which decimated Isle Derniere, an island one hundred miles off the coast of New Orleans which served as a summer resort for the wealthy, and the tragic loss of life and environmental devastation which resulted from the disaster.

Winter Storm Damage Along the California Coast, 1977-1978 George W. Domurat, 1978 California experienced significant coastal damage during the winter of January and February 1978. A combination of high astronomical tides, strong onshore winds, high storm waves, and excessive rainfall produced an aggravated erosional condition. This report documents the causes and results of the dynamic conditions which led to the storm damage along the California coastline. Also included, as an appendix, is a section of a report by the California Coastal Commission summarizing the cost analysis of damage along coastal California. (Author).

Beach Changes Caused by the Atlantic Coast Storm of 17 December 1970 Allan E. DeWall, Cyril Jerome Galvin, Patricia C. Pritchett, 1977 A low-pressure system with 20- to 35-knot winds caused waves up to 11 feet high and tides up to 3.6 feet above normal along Atlantic coast beaches, North Carolina to New England, from 16 to 18 December 1970. Ninety-one beach profile lines were surveyed from dune to low tide terrace within 2 weeks before the storm and immediately after the storm; sand levels at pipes along selected profile lines were measured during the storm. Comparison of before-and-after surveys indicates that 80 percent of the profile lines showed a net loss of sand above mean sea level (MSL). Profiles to wading depth showed accretion below MSL in most cases. The profile line exhibiting maximum erosion (21.7 cubic yards per foot) occurrence at Cape Cod, Massachusetts; maximum accretion (24.4 cubic yards per foot) was found at Atlantic City, New Jersey. Maximum vertical changes in sand level (4 to 5 feet) were observed on coarser, steeper beaches (Cape Cod and Westhampton Beach, New York), and maximum horizontal changes in the position of the MSL contour (-96.3 feet) were observed on finer, flatter beached (Ludlam Island, New Jersey). Extrapolation from surveyed profiles indicated that a minimum of 10.1 million cubic yards of sand was moved from the beach above MSL along 450 miles of ocean front between Cape May, New Jersey, and Race Point, Massachusetts, by this storm. The intensity of the storm is estimated to be equalled or exceeded twice a year. (Author).

Katrina Susan M. Moyer, 2005 At 7 a.m. on August 29, Hurricane Katrina made landfall on the Louisiana coast between Grand Isle and the mouth of the Mississippi River as a strong Category 4 hurricane. The devastation she would bring to the Gulf Coast was widespread and unimaginable. Though warnings had been issued for days and evacuations initiated, thousands stood in the path of

one of the strongest storms in the history of America. Left with no power, no drinking water, dwindling food supplies, and steadily rising waters from major levee breaches, survivors also faced life-threatening looting and widespread fires. Efforts to limit the flooding were initially unsuccessful and refugees from the hurricane fought for their very survival on the streets of New Orleans and throughout Louisiana and Mississippi. While tragedy and desperation brought out the worst in some, it also inspired courage and hope in others, giving them the will to triumph against incalculable odds.
