Parallel Sorting Algorithms Selim G. Akl, 2014-06-20 Parallel Sorting Algorithms explains how to use parallel algorithms to sort a sequence of items on a variety of parallel computers. The book reviews the sorting problem, the parallel models of computation, parallel algorithms, and the lower bounds on the parallel sorting problems. The text also presents twenty different algorithms, such as linear arrays, mesh-connected computers, cube-connected computers. Another example where algorithm can be applied is on

the shared-memory SIMD (single instruction stream multiple data stream) computers in which the whole sequence to be sorted can fit in the respective primary memories of the computers (random access memory), or in a single shared memory. SIMD processors communicate through an interconnection network or the processors communicate through a common and shared memory. The text also investigates the case of external sorting in which the sequence to be sorted is bigger than the available primary memory. In this case, the algorithms used in external sorting is very similar to those used to describe internal sorting, that is, when the sequence can fit in the primary memory, The book explains that an algorithm can reach its optimum possible operating time for sorting when it is running on a particular set of architecture, depending on a constant multiplicative factor. The text is suitable for computer engineers and scientists interested in parallel algorithms.

The Normativity of Nature Hannah Ginsborg, 2015 Why read Kant's Critique of Judgment? For most readers, the importance of the work lies in its contributions to aesthetics and, to a lesser extent, the philosophy of biology. Hannah Ginsborg, by contrast, sees the Critique of Judgment as a central contribution to the understanding of human cognition generally. The fourteen essays collected here advance a common interpretive project: that of bringing out the philosophical significance of the notion of judgment which figures in the third Critique and showing its importance both to Kant's own theoretical philosophy and to contemporary views of human thought and cognition. For us to possess the capacity of judgment, on the interpretation defended here, is for our natural perceptual and imaginative responses to involve a claim to their own normativity with respect to the objects which cause them. It is in virtue of this capacity that we are able not merely to respond discriminatively to objects, as animals do, but to bring objects under concepts. The Critique of Judgment, on this reading, rejects the traditional dichotomy between the natural and the normative: our natural psychological responses to the spatio-temporal objects which affect our senses are both causally determined by those objects, and normatively appropriate to them. The essays in this book aim collectively to develop and illuminate this understanding of judgment in its own right, and to use it to address specific interpretive issues in Kant's aesthetics, theory of knowledge, and philosophy of biology; they are also concerned to bring out the relevance of this conception of judgment to contemporary debates regarding concept-acquisition, the content of perception, and skepticism about rules and meaning.

Wollheim, Wittgenstein, and Pictorial Representation Gary Kemp,Gabriele M Mras,2016-06-10

Pictorial representation is one of the core questions in aesthetics and philosophy of art. What is a picture? How do pictures represent things? This collection of specially commissioned chapters examines the influential thesis that the core of pictorial representation is not resemblance but 'seeing-in', in particular as found in the work of Richard Wollheim. We can see a passing cloud as a rabbit, but we also see a rabbit in the clouds. 'Seeing-in' is an imaginative act of the kind employed by Leonardo's pupils when he told them to see what they could - for example, battle scenes - in a wall of cracked plaster. This collection examines the idea of 'seeing-in' as it appears primarily in the work of Wollheim but also its origins in the work of Wittgenstein. An international roster of contributors examine topics such as the contrast between seeing-in and seeing-as; whether or in what sense Wollheim can be thought of as borrowing from Wittgenstein; the idea that all perception is conceptual or propositional; the metaphor of figure and ground and its relation to the notion of 'two-foldedness'; the importance in art of emotion and the imagination. Wollheim, Wittgenstein and Pictorial Representation: Seeing-as and Seeing-in is essential reading for students and scholars of aesthetics and philosophy of art, and also of interest to those in related subjects such as philosophy of mind and art theory.
