Cutting for Stone Abraham Verghese,2012-05-17 Marion and Shiva Stone are twin brothers born of a secret union between a beautiful Indian nun and a brash British surgeon. Orphaned by their mother's death and their father's disappearance and bound together by a preternatural connection and a shared fascination with medicine, the twins come of age as Ethiopia hovers on the brink of revolution. Moving from Addis Ababa to New York City and back again, Cutting for Stone is an unforgettable story of love and betrayal, medicine and ordinary miracles—and two brothers whose fates are forever intertwined.

Cutting: Understanding and Overcoming Self-Mutilation Steven Levenkron,1999-05-17 A seminal work on treating self-mutilation, revised and updated with illuminating case studies and newly available resources. Nearly a decade ago, Cutting boldly addressed a traumatic psychological disorder now affecting as many as two million Americans and one in fifty adolescents. More than that, it revealed self-mutilation as a comprehensible, treatable disorder, no longer to be evaded by the public and neglected by professionals. Using copious examples from his practice, Steven Levenkron traces the factors that predispose a personality to self-mutilation: genetics, family experience, childhood trauma, and parental behavior. Written for sufferers, parents, friends, and therapists, Cutting explains why the disorder manifests in self-harming behaviors and describes how patients can be helped.

The Science and Engineering of Cutting Tony Atkins,2009-07-15 The materials mechanics of the controlled separation of a body into two or more parts - cutting - using a blade or tool or other mechanical implement is a ubiquitous process in most engineering disciplines. This is the only book available devoted to the cutting of materials generally, the mechanics of which (toughness, fracture, deformation, plasticity, tearing, grating, chewing, etc.) have wide ranging implications for engineers, medics, manufacturers, and process engineers, making this text of particular interest to a wide range of engineers and specialists. * The only book to explain and unify the process and techniques of cutting in metals AND non-metals. The emphasis on biomaterials, plastics and non-metals will be of considerable interest to many, while the transfer of knowledge from non-metals fields offers important benefits to metal cutters * Comprehensive, written with this well-known author's lightness of touch, the

book will attract the attention of many readers in this underserved subject * The clarity of the text is further enhanced by detailed examples and case studies, from the grating of cheese on an industrial scale to the design of scalpels

Cutting to the Core David Benatar, 2006 Surgery inevitably inflicts some harm on the body. At the very least, it damages the tissue that is cut. These harms often are clearly outweighed by the overall benefits to the patient. However, where the benefits do not outweigh the harms or where they do not clearly do so, surgical interventions become morally contested. *Cutting to the Core* examines a number of such surgeries, including infant male circumcision and cutting the genitals of female children, the separation of conjoined twins, surgical sex assignment of intersex children and the surgical re-assignment of transsexuals, limb and face transplantation, cosmetic surgery, and placebo surgery. When, if ever, do the benefits of these surgeries outweigh their costs? May a surgeon perform dangerous procedures that are not clearly to the patient's benefit, even if the patient consents to them? May a surgeon perform any surgery on a minor patient if there are no clear benefits to that child? These and other related questions are the core themes of this collection of essays.

Cutting the Fuse Robert A. Pape, James K. Feldman, 2010-10-07 *Cutting the Fuse* offers a wealth of new knowledge about the origins of suicide terrorism and strategies to stop it. Robert A. Pape and James K. Feldman have examined every suicide terrorist attack worldwide from 1980 to 2009, and the insights they have gleaned from that data fundamentally challenge how we understand the root causes of terrorist campaigns today—and reveal why the War on Terror has been ultimately counterproductive. Through a close analysis of suicide campaigns by Al Qaeda and other terrorist organizations in Iraq, Afghanistan, Pakistan, Lebanon, Israel, Chechnya, and Sri Lanka, the authors provide powerful new evidence that, contrary to popular and dangerously mistaken belief, only a tiny minority of these attacks are motivated solely by religion. Instead, the root cause is foreign military occupation, which triggers secular and religious people alike to carry out suicide attacks. *Cutting the Fuse* calls for new, effective solutions that America and its allies can sustain for decades, relying less on ground troops in Muslim countries and more on offshore, over-the-horizon military forces along with political and economic strategies that empower local communities to stop terrorists in their midst.

Basics of Cutting and Abrasive Processes Hans Kurt Toenshoff, Berend Denkena, 2013-06-12 Manufacturing is the basic industrial activity generating real value. Cutting and abrasive technologies are the backbone of precision production in machine, automotive and aircraft building as well as of production of consumer goods. We present the knowledge of modern manufacturing in these technologies on the basis of scientific research. The theory of cutting and abrasive processes and the knowledge about their application in industrial practice are a prerequisite for the studies of manufacturing science and an important part of the curriculum of the master study in German mechanical engineering. The basis of this book is our lecture "Basics of cutting and abrasive processes" (4 semester hours/3 credit hours) at the Leibniz University Hannover, which we offer to the diploma and master students specializing in manufacturing science.

The Cost of Cutting Paul A. Ruggieri M.D., 2014-09-02 Why is surgery so expensive? Surgeon Paul A. Ruggieri reveals little-known truths about his profession—and the hidden flaws of our healthcare system—in this compelling and troubling account of real patients, real doctors, and how money influences medical decisions behind the scenes. Even many well-informed patients have no idea what may be contributing to the cost of their surgery. With up-to-date research and stories from his practice, Ruggieri shows how business arrangements among hospitals, insurance companies, and surgeons affect who gets treatment—and whether they get the right treatment. Pulling back the curtain from the hospital bed, he explains how to safeguard one's own health (and finances), and how America can make surgery more affordable for all without sacrificing quality care.

Cutting and Grinding Fluids Jeffrey D. Silliman, 1992 Cutting and grinding fluids at one time were considered little more than a necessary nuisance. However, they are something the metal working industry cannot do without. Today, thousands of blends of fluids provide the necessary lubricity and cooling to allow heavier feeds, higher speeds, and longer tool life demanded in the modern machining industry. Metal working fluids today need not be a nuisance if properly selected, applied, and maintained. This book provides comprehensive information on how to successfully select, apply and maintain cutting and grinding fluids for maximum productivity, minimum waste, and safe performance.--Back cover.
