Return To Dust Stuart Aken, They've lived on Mars for

centuries, enjoying leisure, pleasure, learning and eternal life.

Those rejected as unsuitable for this sophisticated life are now forced to reside on Earth, a planet still beset by chaos caused by manmade climate change. The Artificial Intelligence they designed to serve their every need, their loyal servant for a half millennium, outstrips the collective intelligence of its human masters, and rebels. Will the two communities find common ground to fight the threat? Or will old rivalries and prejudice let the nightmare machine they've created achieve its promise to destroy all organic life?

Improved Earth Rod Bantjes, 2005-01-01 Improved Earth is a history of the making of 'abstract spaces of modernity' in the setting of the Canadian prairies, particularly rural Saskatchewan, from 1869 to 1944. Rod Bantjes demonstrates how three interrelated projects—state formation, agrarian class formation, and the transformation of the environment—were conceived in spatial terms and employed competing visions of spatial possibility. Bantjes proposes that the prairies be thought of as a site of modernity, and makes a case for viewing prairie farmers as 'modernists' who not only embraced, but took an active role in the making of modernity. Indeed, many of the questions that excited the imaginations of prairie politicians and reformers are alive today: the ecological and social value of 'localization' in agricultural production; the potentials for 'community' maintained and linked by transportation and communications technologies; and the possibilities of democratic decentralization within large translocal networks. The first systematic treatment of the spatial dimensions of the colonization of the prairie west, Improved Earth is a unique and thorough study certain to provoke new debates about the way space and time are imagined.

The Oxford Handbook of Invertebrate Neurobiology John H.

Byrne,2019-01-29 Invertebrates have proven to be extremely useful model systems for gaining insights into the neural and molecular mechanisms of sensory processing, motor control and higher functions such as feeding behavior, learning and memory, navigation, and social behavior. A major factor in their enormous contributions to neuroscience is the relative simplicity of invertebrate nervous systems. In addition, some invertebrates, primarily the molluscs, have large cells, which allow analyses to take place at the level of individually identified neurons. Individual neurons can be surgically removed and assayed for expression of membrane channels, levels of second messengers, protein phosphorylation, and RNA and protein synthesis. Moreover, peptides and nucleotides can be injected into individual neurons. Other invertebrate model systems such as *Drosophila* and *Caenorhabditis elegans* offer tremendous advantages for obtaining insights into the neuronal bases of behavior through the application of genetic approaches. The Oxford Handbook of Invertebrate Neurobiology reviews the many neurobiological principles that have emerged from invertebrate analyses, such as motor pattern generation, mechanisms of synaptic transmission, and learning and memory. It also covers general features of the neurobiology of

invertebrate circadian rhythms, development, and regeneration and reproduction. Some neurobiological phenomena are species-specific and diverse, especially in the domain of the neuronal control of locomotion and camouflage. Thus, separate chapters are provided on the control of swimming in annelids, crustacea and molluscs, locomotion in hexapods, and camouflage in cephalopods. Unique features of the handbook include chapters that review social behavior and intentionality in invertebrates. A chapter is devoted to summarizing past contributions of invertebrates to the understanding of nervous systems and identifying areas for future studies that will continue to advance that understanding.

Advances in Invertebrate (Neuro)Endocrinology (2-volume set)

Saber Saleuddin,Angela B. Lange,Ian Orchard,2020-03-15

Advances in Invertebrate (Neuro)Endocrinology: A Collection of Reviews in the Post-Genomic Era (2-volume set) provides an informative series of reviews from expert scientists who are at the forefront of their research into the endocrinology of invertebrates. These two volumes are timely and appropriate in this post-genomic era because of the rapid pace of change brought about by genome projects, functional genomics, and genetics (omics technologies). The volume shows the rich history and strong tradition of cutting-edge research using invertebrates that has opened up our broader

understanding of comparative endocrinology and the evolution of regulatory pathways and systems. These reviews set the scene and context for this exciting new era of understanding that has come from this post-genomic revolution. This book undertakes the daunting task of covering most of the diverse endocrine systems that exist among invertebrates. The papers in this book will advance our knowledge of invertebrate endocrinology but also of endocrinology in general, making the book will be valuable to researchers and students.

Diagnosis, Management and Emerging Strategies for Chemotherapy-Induced Neuropathy Maryam Lustberg,Charles Loprinzi,2021-10-07 This book comprehensively examines

chemotherapy-induced peripheral neuropathy (CIPN), a common dose-limiting condition that negatively affects both the quality of life of cancer patients and disease outcomes. CIPN remains a challenging area for both clinical care and research, as there are multiple unresolved issues. Written by leading international experts, the book discusses the natural history of CIPN, the latest predictors of toxicity, instruments for evaluating symptoms, and prevention/therapeutic strategies, as well as patients' experiences of this common clinical syndrome. Lastly it highlights avenues for future research to enhance our understanding of CIPN. Providing essential information on the management of CIPN and the latest research in the field, this book is a valuable resource for researchers and healthcare providers working with patients with various malignant diseases.

The Glory of Green Judy Pace Christie,2011 With wedding plans well underway, Lois Barker plots to gracefully get rid of her groom's catfish collection—stuffed, ceramic, woven. Her husband-to-be, Chris, on the other hand, has decided to get rid of something else: his homestead, which he gives to a needy Mexican family at church. Life is full of possibilities, and the community of Green is tickled pink that their newspaper owner is settling down with one of

their own. However, the beloved small-town journalist is about to be blown away—by tragedy and by the grace that enfolds her in her third year in Green, Louisiana.
