Perception, Action, and Cognition Snehlata Jaswal,2016-11-09 Even as simple a task as quenching thirst with a glass of water involves a sequence of perceptions and actions woven together by expectations and experience. What are the myriad links between perception and action, and what does cognition have to do with them? Intuitively we think that perception precedes action, but we also know that action moulds perception. The reciprocal links between perception and action are now accepted almost universally. The discovery of mirror neurons that encode observed actions has further emphasized the coupling of perception and action. The real aim of this research topic is to go beyond identifying the evidence for perception-action coupling, and study the cognitive entities and processes that influence the perception-action link. For example, the internal representations of perceived and produced events are created and modified through experience. Yet the perception action link is considered relatively automatic. To what extent is the perception-action link affected by representations and their manipulations by cognitive processes? Does selective attention modify the perception action coupling? How, and to what extent, does the context provide sources of cognitive control? The developmental trajectory of the perception-action link and the influence of cognition at various stages of development could be another line of important evidence. The responses to these and other such questions contribute to our understanding of this research area with significant implications for perception-action coupling.

Policies for a Carbon-Neutral Industry in the Netherlands OECD,2021-10-15 This report presents a comprehensive assessment of the policy instruments adopted by the Netherlands to reach carbon neutrality in its manufacturing sector by 2050. The analysis illustrates the strength of combining a strong commitment to raising carbon prices with ambitious technology support, uncovers the pervasiveness of competitiveness provisions, and highlights the trade-off between short-term emissions cuts and longer-term technology shift.

Social Cognition Jessica Sommerville,Jean Decety,2016-09-13 Social Cognition brings together diverse and timely writings that highlight cutting-edge research and theories on the development of social cognition and social behavior across species and the life span. The volume is organized according to two central themes that address issues of continuity and change both at the phylogenetic and the ontogenetic level. First, it addresses to what extent social cognitive abilities and behaviors are shared across species, versus abilities and capacities that are uniquely human. Second, it covers to what extent social cognitive abilities and behaviors are continuous across periods of development within and across the life span, versus their change with age. This volume offers a fresh perspective on social cognition and behavior, and shows the value of bringing together different disciplines to illuminate our understanding of the origins, mechanisms, functions, and development of the many capacities that have evolved to facilitate and regulate a wide variety of behaviors fine-tuned to group living.

Optical Interconnections and Parallel Processing Pascal Berthome,Alfonso Ferreira,2012-12-06 Optical media are now widely used in the telecommunication networks, and the evolution of optical and optoelectronic technologies tends to show that their wide range of techniques could be successfully introduced in shorter-distance interconnection systems. This book bridges the existing gap between research in optical interconnects and research in high-performance computing and communication systems, of which parallel processing is just an example. It also provides a more comprehensive understanding of the advantages and limitations of optics as applied to high-speed communications. Audience: The book will be a vital resource for researchers and graduate students of optical interconnects, computer architectures and high-performance computing and communication systems who wish to understand the trends in the newest technologies, models and communication issues in the field.
