David A. Winnett

Reinventing Discovery Michael Nielsen,2020-04-07 Reinventing Discovery argues that we are in the early days of the most dramatic change in how science is done in more than 300 years. This change is being driven by new online tools, which are transforming and radically accelerating scientific discovery--

APC New Discovery - Class 5 S.C. Maheshwari,Vineeta Mittal, The early schooling years in a child's life are of extreme importance. These are the times when he focuses his eyes and mind on everything that is new and appealing. His mind is untrained and he has learned only the basics of communication. His vocabulary is limited but he is eager to learn. Whatever is presented to him, he absorbs like a sponge. His attention span is short and he requires constant reinforcement. What interests him most is things and events around him. This is the golden opportunity to inculcate in him a spirit of adventure and inquiry, to teach him to ask, to reason and to pick up healthy habits. With this in mind our publisher decided to bring out a science series for the junior classes.

The Scientists: An Epic of Discovery Andrew Robinson,2023-04-25 An intriguing and illuminating read for science buffs, those fascinated by the lives and minds of great men and women, and anyone curious about how we came to understand the physical world The ideas, experiments, and inventions of great scientists have revolutionized our understanding of the world around us. Theories, discoveries, and technologies—from relativity, the genetic code, and the periodic table to synthetic drugs, nuclear weapons, and brain scans—have transformed the physical world and our lives. Copernicus, Crick, Watson, Galileo, Marie Curie: these are some of the forty pioneers behind modern science whose stories are explored here. The scientists come from around the globe and represent multiple nationalities—American, English, German, French, Dutch, Czech, Indian, Japanese, and more. Often unorthodox thinkers, they frequently had to struggle against hostile contemporaries to gain recognition for their ideas and discoveries. All the major scientific disciplines are covered, including astronomy, biology, biochemistry, chemistry, computing, ecology, geology, medicine, neurology, physics, and psychology, as well as mathematics.

A Love of Discovery Robert Karplus,2002-01-31 Robert Karplus, a professor of physics at the University of California, Berkeley, USA, became a leader in the movement to reform elementary school science in the 1960s. This book selects the enduring aspects of his work and presents them for the scientists and science educators of today. In an era when 'science education for ALL students' has become the clarion call, the insights and works of Robert Karplus are as relevant now as they were in the 1960s, '70s, and '80s. This book tries to capture the essence of his life and work and presents selections of his published articles in a helpful context.

The Logic of Scientific Discovery Karl Popper,2005-11-04 Described by the philosopher A.J. Ayer as a work of 'great originality and power', this book revolutionized contemporary thinking on science and knowledge. Ideas such as the now legendary doctrine of 'falsificationism' electrified the scientific community, influencing even working scientists, as well as post-war philosophy. This astonishing work ranks alongside *The Open Society and Its Enemies* as one of Popper's most enduring books and contains insights and arguments that demand to be read to this day.

Exploring Science David Klahr,2000 David Klahr suggests that we now know enough about cognition--and hence about everyday thinking--to advance our understanding of scientific thinking.

Ceci,2018-10-07 This book constitutes the proceedings of the 21st International Conference on Discovery Science, DS 2018, held in Limassol, Cyprus, in October 2018, co-located with the International Symposium on Methodologies for Intelligent Systems, ISMIS 2018. The 30 full papers presented together with 5 abstracts of invited talks in this volume were carefully reviewed and selected from 71 submissions. The scope of the conference includes the development and analysis of methods for discovering scientific knowledge, coming from machine learning, data mining, intelligent data analysis, big data analysis as well as their application in various scientific domains. The papers are organized in the following topical sections: Classification; meta-learning; reinforcement learning; streams and time series; subgroup and subgraph discovery; text mining; and applications.

When Science Goes Wrong Simon LeVay,2008-03-25 Brilliant scientific successes have helped shape our world, and are always celebrated. However, for every victory, there are no doubt numerous little-known blunders. Neuroscientist Simon LeVay brings together a collection of fascinating, yet shocking, stories of failure from recent scientific history in *When Science Goes Wrong*. From the fields of forensics and microbiology to nuclear physics and meteorology, in *When Science Goes Wrong* LeVay shares twelve true essays illustrating a variety of ways in which the scientific process can go awry. Failures, disasters and other negative outcomes of science can result not only from bad luck, but from causes including failure to follow appropriate procedures and heed warnings, ethical breaches, quick pressure to obtain results, and even fraud. Often, as LeVay notes, the greatest opportunity for notable mishaps occurs when science serves human ends. LeVay shares these examples: To counteract the onslaught of Parkinson's disease, a patient undergoes cutting-edge brain surgery using fetal transplants, and is later found to have hair and cartilage growing inside his brain. In 1999, NASA's Mars Climate Orbiter spacecraft is lost due to an error in calculation, only months after the agency adopts a policy of "Faster, Better, Cheaper." Britain's Bracknell weather forecasting team predicts two possible outcomes for a potentially violent system, but is pressured into releasing a 'milder' forecast. The BBC's top weatherman reports there is "no hurricane", while later the storm hits, devastating southeast England. Ignoring signals of an imminent eruption, scientists decide to lead a party to hike into the crater of a dormant volcano in Columbia, causing injury and death. *When Science Goes Wrong* provides a compelling glimpse into human ambition in scientific pursuit.

Citizen Science Caren Cooper,2016-12-20 True stories of everyday volunteers participating in scientific research that "may well prompt readers to join the growing community" (Booklist). Think you need a degree in science to contribute to important scientific discoveries? Think again. All around the world, in fields ranging from meteorology to ornithology to public health, millions of everyday people are choosing to participate in the scientific process. Working in cooperation with scientists in pursuit of information, innovation, and discovery, these volunteers are following protocols, collecting and reviewing data, and sharing their observations. They're our neighbors, in-laws, and coworkers. Their story, along with the story of the social good that can result from citizen science, has largely been untold, until now. Citizen scientists are challenging old notions about who can conduct research, where knowledge can be acquired, and even how solutions to some of our biggest societal problems might emerge. In telling their story, Caren Cooper just might inspire you to rethink your own assumptions about the role that individuals can play in gaining scientific understanding—and putting that understanding to use as a steward of our world. Science Set Free Rupert Sheldrake,2012-09-04 The bestselling author of *Dogs That Know When Their Owners Are Coming Home* offers an intriguing new assessment of modern day science that will radically change the way we view what is possible. In *Science Set Free* (originally published to acclaim in the UK as *The Science Delusion*), Dr. Rupert Sheldrake, one of the world's most innovative scientists, shows the ways in which science is being constricted by assumptions that have, over the

years, hardened into dogmas. Such dogmas are not only limiting, but dangerous for the future of humanity. According to these principles, all of reality is material or physical; the world is a machine, made up of inanimate matter; nature is purposeless; consciousness is nothing but the physical activity of the brain; free will is an illusion; God exists only as an idea in human minds, imprisoned within our skulls. But should science be a belief-system, or a method of enquiry? Sheldrake shows that the materialist ideology is moribund; under its sway, increasingly expensive research is reaping diminishing returns while societies around the world are paying the price. In the skeptical spirit of true science, Sheldrake turns the ten fundamental dogmas of materialism into exciting questions, and shows how all of them open up startling new possibilities for discovery. Science Set Free will radically change your view of what is real and what is possible.
