DIY City Hank Dittmar, 2020-06-02 Some utopian plans have shaped our cities—from England's New Towns and Garden Cities to the Haussmann plan for Paris and the L'Enfant plan for Washington, DC. But these grand plans are the exception, and seldom turn out as envisioned by the utopian planner. Inviting city neighborhoods are more often works of improvisation on a small scale. This type of bottom-up development gives cities both their character and the ability to respond to sudden change. Hank Dittmar, urban planner, friend of artists and creatives, sometime

rancher, “high priest of town planning” to the Prince of Wales, believed in letting small things happen. Dittmar concluded that big plans were often the problem. Looking at the global cities of the world, he saw a crisis of success, with gentrification and global capital driving up home prices in some cities, while others decayed for lack of investment. In *DIY City*, Dittmar explains why individual initiative, small-scale business, and small development matter, using lively stories from his own experience and examples from recent history, such as the revival of Camden Lock in London and the nascent rebirth of Detroit. *DIY City*, Dittmar’s last original work, captures the lessons he learned throughout the course of his varied career—from transit-oriented development to Lean Urbanism—that can be replicated to create cities where people can flourish. *DIY City* is a timely response to the challenges many cities face today, with a short supply of affordable housing, continued gentrification, and offshore investment. Dittmar’s answer to this crisis is to make Do-It-Yourself the norm rather than the exception by removing the barriers to small-scale building and local business. The message of *DIY City* can offer hope to anyone who cares about cities.

DIY U Anya Kamenetz,2010-04-01 The price of college tuition has increased more than any other major good or service for the last twenty years. Nine out of ten American high school seniors

aspire to go to college, yet the United States has fallen from world leader to only the tenth most educated nation. Almost half of college students don't graduate; those who do have unprecedented levels of federal and private student loan debt, which constitutes a credit bubble similar to the mortgage crisis. The system particularly fails the first-generation, the low-income, and students of color who predominate in coming generations. What we need to know is changing more quickly than ever, and a rising tide of information threatens to swamp knowledge and wisdom. America cannot regain its economic and cultural leadership with an increasingly ignorant population. Our choice is clear: Radically change the way higher education is delivered, or resign ourselves to never having enough of it. The roots of the words university and college both mean community. In the age of constant connectedness and social media, it's time for the monolithic, millennium-old, ivy-covered walls to undergo a phase change into something much lighter, more permeable, and fluid. The future lies in personal learning networks and paths, learning that blends experiential and digital approaches, and free and open-source educational models. Increasingly, you will decide what, when, where, and with whom you want to learn, and you will learn by doing. The university is the cathedral of modernity and rationality, and with our whole civilization in crisis, we are poised on the brink of Reformation.
