Surface Organometallic Chemistry: Molecular Approaches to Surface Catalysis Jean-Marie Basset,Bruce C. Gates,Jean-Pierre Candy,Agnès Choplin,Michel Leconte,Françoise Quignard,Cathérine Santini,2012-12-06

Surface organometallic chemistry is a new field bringing together researchers from organometallic, inorganic, and surface chemistry and catalysis. Topics ranging from reaction mechanisms to catalyst preparation are considered from a molecular basis, according to which the active site on a catalyst surface has a supra-molecular character. This, the first book on the subject, is the outcome of a NATO Workshop held in Le Rouret, France, in May, 1986. It is our hope that the following chapters and the concluding summary of recommendations for research may help to provide a definition of surface organometallic chemistry. Besides catalysis, the central theme of the Workshop, four main topics are considered: 1) Reactions of organometallics with surfaces of metal oxides, metals, and zeolites; 2) Molecular models of surfaces, metal oxides, and metals; 3) Molecular approaches to the mechanisms of surface reactions; 4) Synthesis and modification of zeolites and related microporous solids. Most surface organometallic chemistry has been carried out on amorphous high-surface-area metal oxides such as silica, alumina, magnesia, and titania. The first chapter, contributed by KNOZINGER, gives a short summary of the structure and reactivity of metal oxide surfaces. Most of our understanding of these surfaces is based on acid base and redox chemistry; this chemistry has developed from X-ray and spectroscopic data, and much has been inferred from the structures and reactivities of adsorbed organic probe molecules. There are major opportunities for extending this understanding by use of well-defined (single crystal) oxide surfaces and organometallic probe molecules.

Indigenous Environmental Justice Karen Jarratt-Snider,Marianne O. Nielsen,2020 With connections to traditional homelands being at the heart of Native identity, environmental justice is of heightened importance to Indigenous communities. Not only do irresponsible and exploitative environmental policies harm the physical and financial health of Indigenous communities, they also cause spiritual harm by destroying the land and wildlife that are held in a place of exceptional reverence for Indigenous peoples.
