Terrifying Storms Jim Pipe,2011-06 Savage storms at sea, giant hailstones and deadly lightening bolts – there is no doubt that storms are scary stuff! Terrifying Storms features giant walls of sand, a bizarre downpour of tadpoles and also looks at the devastating effect storms have on our world. On the Edge is a brand new series of high-interest non-fiction books that will appeal to struggling or reluctant readers. With stunning pictures and clear, simple text, The narrative focuses on extraordinary real life stories to engage readers and keep them on the edge of their seats! Each book features a fun quiz to see if the reader could take the same challenges.

Investigation of Inappropriate Pollutant Entries Into Storm Drainage Systems, 1993

Investigation of Inappropriate Pollutant Entries Into Storm Drainage Systems Robert Pitt, 1994-11 Provides guidance to municipalities for investigating non-stormwater entries into storm drainage systems. These entries may originate from many diverse sources including sanitary wastewaters from leaky or directly connected sanitary sewerage and from poorly operating septic tank systems, washwaters for laundries and vehicle service facilities, and many types of industrial wastewaters that are discharged to drains leading to storm drainage or from direct industrial wastewater connections to the storm drainage system. 28 charts, tables and graphs.

Storm and Cloud Dynamics William R. Cotton, Richard A. Anthes, 2013-10-22 This book focuses on the dynamics of clouds and of precipitating mesoscale meteorological systems. Clouds and precipitating mesoscale systems represent some of the most important and scientifically exciting weather systems in the world. These are the systems that produce torrential rains, severe winds

including downburst and tornadoes, hail, thunder and lightning, and major snow storms. Forecasting such storms represents a major challenge since they are too small to be adequately resolved by conventional observing networks and numerical prediction models.

Howell's Storm Jim Leeke, 2019-04-02 More than half a century ago, New York City felt the increasing effects of drought, which lasted throughout 1949 and into 1950. By February, the desperate city had to try something different. Mayor William O'Dwyer hired a municipal rainmaker. Dr. Wallace E. Howell was an inspired choice. The handsome, 35-year-old Harvard-educated meteorologist was the ideal scientist—soft-spoken, modest and articulate. No fast-talking prairie huckster, he took credit for nothing he couldn't prove with sound empirical data. Howell's meticulous nature often baffled jaded New Yorkers. Over the next year, his leadership of a small ground and air armada, and his unprecedented scientific campaign to replenish the city's Catskills reservoirs, captured the imagination of the world. New York's cloud-seeding and rainmaking efforts would remain the stuff of legends—and controversy—for decades. This is the first in-depth look at New York City's only official rainmaker—an unintentional celebrity, dedicated scientist and climate entrepreneur, whose

activities stirred up controversy among government officials, meteorologists, theologians, farmers and resort owners alike.
