Eco-service Development Siegfried Behrendt,Christine Jasch,Jaap Kortman,Gabriele Hrauda,Ralf Pfitzner,Daniela Velte,2017-09-08 Sustainable development will not be possible without fundamental improvements in resource productivity and energy efficiency, the adaptation of material flows into natural cycles as well as a radical change in production and consumption patterns. In essence, what is required is not only an ecological approach to product design but also new marketing and consumption patterns for products that can satisfy our needs in a more environmentally sound way.In recent years there has been growing interest in the possibilities of eco-services to achieve some of these aims. Ecologically oriented leasing, renting, pooling and sharing, where the emphasis is placed on the sale of a product's use rather than on the product itself, offer great possibilities for innovation and environmental impact reduction. At the same time, there are opportunities to create new commercial enterprises, produce added value to production and distribution functions, and therefore create jobs. Up until now, however, there has been little research about the state of the art in eco-services, how new services can be developed, what the attitudes of consumers are to services rather than products and what the consequences of such a structural

adjustment would be for firms. Eco-service Development addresses this lack of research, first by providing a comprehensive inventory and analysis of current eco-services in four European countries: Germany, Austria, the Netherlands and Spain. It then systematically explores the options open to market participants, the potential for environmental impact reduction, potential barriers to eco-services (such as consumer and producer resistance) and, finally, with what political and legal instruments ecologically oriented services can best be promoted. The book analyzes eight consumer sectors – washing, cleaning, cooking, entertainment, gardening, do-it-yourself, mobility and leisure time – from the point of view of both supply and demand and highlights the optimization potential and development perspectives for commercial new use eco-service concepts. This book is the most comprehensive analysis yet published of how eco-services are being implemented and how they could best be encouraged and contains valuable lessons for policy-makers, interested businesses and all those in the academic community searching for ways to dematerialize the economy.

*Learning To Be American* Rubén Peinado Abarrio, 2017-07-26 Pocos novelistas contemporáneos han analizado la cultura americana con el detalle con el que lo ha hecho Richard Ford en su trilogía sobre Frank Bascombe: 'The Sportswriter', 'Independence Day' y 'The Lay of the Land'. Un tríptico sobre la idiosincrasia de la sociedad norteamericana expuesto por uno de los narradores más meticulosos de la nación. Este libro se aventura en un

territorio sin explorar, revelando cómo el singular sabor americano de las novelas de Frank Bascombe también surge de escenarios peculiares y de los personajes marginales, que proponen modelos de identidad alternativos. Esta obra redescubre la esencia del principal proyecto novelístico de Ford, desvelándolo como una fuente infinita de percepciones para cualquier lector interesado en la gente, los mitos y las narrativas que construyen el ser americano.

*Handbook of Bioplastics and Biocomposites Engineering Applications*

Inamuddin, Tariq Altalhi, 2022-11-21 Handbook of Bioplastics and Biocomposites Engineering Applications The 2nd edition of this successful Handbook explores the extensive and growing applications made with bioplastics and biocomposites for the packaging, automotive, biomedical, and construction industries. Bioplastics are materials that are being researched as a possible replacement for petroleum-based traditional plastics to make them more environmentally friendly. They are made from renewable resources and may be naturally recycled through biological processes, conserving natural resources and reducing CO<sub>2</sub> emissions. The 30 chapters in the Handbook of Bioplastics and Biocomposites Engineering Applications discuss a wide range of technologies and classifications concerned with bioplastics and biocomposites with their applications in various paradigms including the engineering segment. Chapters cover the biobased materials; recycling of bioplastics; biocomposites modeling; various biomedical and engineering-based applications including optical devices, smart materials, cosmetics, drug delivery, clinical, electrochemical, industrial, flame retardant, sports, packaging, disposables, and biomass. The different approaches to sustainability are also treated. Audience The Handbook will be of central interest to engineers, scientists, and researchers who are working in the fields of bioplastics, biocomposites, biomaterials for biomedical engineering, biochemistry, and

materials science. The book will also be of great importance to engineers in many industries including automotive, biomedical, construction, and food packaging.

Sport and the Environment Brian Wilson, Brad Millington, 2020-07-30 This volume examines sport's relationship with the environment in the context of the ongoing climate crisis. Contributors examine how sport is implicated in environmentally damaging activities, how decisions are made about how to respond to environmental issues, who benefits most and least from these decisions.

Simulation and Social Theory Sean Cubitt, 2000-12-22 This insightful book is the first to critically examine the ideas of some of the key thinkers of simulation. It addresses the work of Baudrillard, Debord, Virilio and Eco, clarifying their arguments by referring to the intellectual and social worlds each emerged from distilling what is important from their discussions. The book argues for a critical and selective use of the concept of simulation. Like the idea of ideology, simulation is a political theory, but it has also become a deeply pessimistic theory of the end of history and the impossibility of positive change. Through a series of reflections on the meaning of theme parks, warfare and computer modelling, Sean Cubitt demonstrates the strengths and limitations of the simulation thesis.

*Towards a Sustainable Philosophy of Endurance Sport* Ron Welters, 2019-02-05 This book provides new perspectives on endurance sport and how it contributes

to a good and sustainable life in times of climate change, ecological disruption and inconvenient truths. It builds on a continental philosophical tradition, i.e. the philosophy of among others Peter Sloterdijk, but also on “ecosophy” and American pragmatism to explore the idea of sport as a voluntary attempt to overcome unnecessary obstacles. Since ancient times, human beings have been involved in practices of the Self in order to work on themselves and improve themselves, for instance by strengthening their physical condition and performance through sport. In the contemporary world, millions of individuals engage in endurance sports such as running, swimming and cycling, to get or keep themselves in shape. This study focuses on the ethical dimension of long-distance sport, notably cycling, as a way to become better citizens, but also to contribute to a more sustainable society and healthier planet. Dominant world-views are challenged and an alternative vision is presented. Discourse analysis and conceptual analysis are combined with phenomenology and self-observations of a dedicated practitioner of endurance sport. This book is a great source for philosophers, sport philosophers, environmental philosophers, sport scientists, policy makers, sport journalists, and endurance sport practitioners.

*Understanding Lifestyle Sport* Belinda Wheaton, 2004-08-26 This collection of innovative studies represents the first serious academic investigation of 'lifestyle' or 'postmodern' sports, such as snowboarding, skateboarding and surfing.

The Engineering of Sport 6 Eckehard Moritz, Steve Haake, 2010-04-26 This proceedings volume of the ISEA 2006 examines sports engineering, an interdisciplinary subject which encompasses and integrates not only sports science and engineering but also biomechanics, physiology and anatomy, and motion physics. This is the first title of its kind in the emerging field of sports technology.

Postfeminisms Ann Brooks, 2002-09-11 This book examines how feminism is being redefined for the twenty-first century. Concepts covered include: feminist epistemology, Foucault, psychoanalytic theory and semiology, cultural politics and sexuality and identity.

Sport, Coaching and Intellectual Disability David Hassan, Sandra Dowling, Roy McConkey, 2014-07-17 There are more opportunities than ever before for young people with disabilities to participate in sport and adapted physical education. For example, there are more than 3.7 million athletes worldwide aligned to the Special Olympics organisation, with national associations active in more than 200 countries worldwide. Despite this rapid growth, all too often coaches and teachers lack adequate knowledge of the particular challenges faced by people with intellectual disabilities. The principal aim of this book is to improve the understanding and professional skills of coaches, teachers, practitioners and researchers, to promote awareness of successful programmes addressing the needs of such young people, and to challenge the prevailing myths and stereotypes surrounding their abilities.

With contributions from leading researchers and practitioners around the world, this book is the first to explore in depth the topic of sport and intellectual disability from a coaching perspective. Including both theoretical discussion and empirical case-studies, the book covers a full range of contemporary issues and themes, including training and coaching, family support, perceptions of disability, athlete motivation, positive sport experiences, motor development programmes, and social and cultural aspects of disability. Sport Coaching and Intellectual Disability is important reading for any student, researcher, coach, teacher, manager or policy maker with an interest in disability sport, physical education, coaching, or mainstream disability studies.
