There's so much to do, and way too much to buy. Whether it's through late night TV ads, social media, or other sources of influence, we are addicted to buying and then storing things. Sometimes we consume with no regret and other times we realize that we're doing more harm than good to our wallets and our homes. It's a constant cycle—one that many are longing to break. Who wants their hard-earned money to go toward something that soon ends up in a landfill? A guide to eco-minimalism with a plan that is realistic. Manufacturing stuff exploits Earth's precious (and finite) resources. And then there's the harsh reality of where it all goes. Sustainable Minimalism is the solution. Empower yourself to incrementally incorporate the tenets of sustainable minimalism into your home and life. Learn to master the easiest tasks first and build upon your

successes? a practical and stress-free process. Now that's sustainable! Sustainability Compendium Edition III Fibre2Fashion, *Sustainability Compendium* is an informative sourcebook that holds a detailed description of hundred sustainable textile companies filtered from different categories of the textile value chain. It will be a guiding tool for companies who are seeking to turn their business sustainable as well as be an inspiration for others to turn towards ecological business. This compendium will give the featured companies a voice to narrate their sustainable story to the corporate world. Each participant would have a space in this feature to present their sustainable activities setting an example that would lead others to join the sustainable drive. Fashion in itself is a dynamic industry, and if you choose to look at fashion solely from the sustainability point of view, then keeping track of developments is simply not easy. Inventions, innovations and ideas have already changed the narrative, and the axioms of the business of fashion that dominated the discourse at the turn of the century, today sound hopelessly outdated and out-of-place. 'Sustainable fashion' was just another segment of the industry till even in the early half of this decade. But not anymore. Thought leaders are unanimous about one thing—sustainable fashion can no more be a niche, and many of them agree that if it ain't sustainable, then it ain't fashion. By and by, many brands are lending credence to that idea, while for many others the idea is just beginning to sink in. This is where this compendium comes in—with ideas. There are many articles in this volume that discuss different aspects threadbare. 'Fashionable=Sustainable. Is that even possible?' argues that there is more to sustainable fashion than meets the eye. The article asserts that the relationship between fashion and sustainability is active and complex, and each time we look at the key ideas or issues at stake, different aspects seem to come to light. It looks at sustainability in manufacturing, working conditions of garment workers, and the role of the fashion designer in the entire process. Therein, 'Revitalising a lifestyle' is an interview with Edric Ong, an award-winning Malaysian designer of natural textiles, fashion and crafts. Currently, Senior Vice-President of the World Crafts Council Asia Pacific, he set up the World Eco-Fibre and Textile (WEFT) Network to further the cause of natural fibres and dyes. In a freewheeling interview, Ong talks about sustainable fashion and where it is going globally, and how it can be made a more permanent mode of retail fashion. He also talks about his well-known experiments with ikat, and points out that eco-lifestyle is about going back to the basics. 'The True Cost of Fast Fashion' goes ahead to underline the fact that

it is indeed possible to improve and impact almost every aspect of the production process and factors such as scale, technical viability and global supply chains are no longer limiting as long as businesses are committed to paying the true cost of production. And, 'No, fast is not sustainable' takes a deep dive into the entire gamut of fashion, right from the birth of the concept to the explosive growth of the segment, and finally the backlash. I hope this fourth edition will give you thoughts to mull over and even implement some in your day to day business.

**The Sustainable Solution: Plastic Granulate Production in Action** Sándor Varga, MONEY FROM TRASH. Plastic waste has become a major environmental concern in today's world. The excessive use of plastic and its improper disposal has led to the pollution of our oceans, landfills, and even our air. However, instead of viewing plastic waste as a problem, we can see it as an opportunity. With the right technology and processes, plastic waste can be transformed into high-quality secondary raw material, which can be used in various industries. This not only helps in reducing the amount of plastic waste in our environment but also creates a new source of income. By turning trash into money, we can incentivize individuals and businesses to properly manage their plastic waste. This could potentially lead to a cleaner and more sustainable future for our planet. Through the efficient processing of plastic waste, we can not only tackle the issue of pollution but

also create a circular economy where waste is seen as a valuable resource. It is time for us to rethink our approach towards plastic waste and explore its potential as a secondary raw material.
