**Emerging and Eco-Friendly Approaches for Waste Management** Ram Naresh Bharagava, Pankaj Chowdhary, 2018-05-25 Rapid industrialization is a serious concern in the context of a healthy environment. With the growth in the number of industries, the waste generated is also growing exponentially. The various chemical processes operating in the manufacturing industry generate a large number of by-products, which are largely harmful and toxic pollutants and are generally discharged into the natural water bodies. Once the pollutants enter the environment, they are taken up by different life forms, and because of bio-magnification, they affect the entire food chain and have severe adverse effects on all life forms, including on human health. Although, various physico-chemical and biological approaches are available for the removal of toxic pollutants, unfortunately these are often ineffective and traditional clean up practices are inefficient. Biological approaches utilizing microorganisms (bacterial/fungi/algae), green plants or their enzymes to degrade or detoxify environmental pollutants such as endocrine disruptors, toxic metals, pesticides, dyes, petroleum hydrocarbons and phenolic compounds, offer eco-friendly approaches. Such eco-friendly approaches are often more effective than traditional practices, and are safe for both industry workers as well as environment. This book provides a comprehensive overview of various toxic environmental pollutants from a variety natural and anthropogenic sources, their toxicological effects on the environment, humans, animals and plants as well as their biodegradation and bioremediation using emerging and eco-friendly approaches (e.g. Anammox technology, advanced oxidation processes, membrane bioreactors, membrane processes, GMOs), microbial degradation (e.g. bacteria, fungi, algae), phytoremediation, biotechnology and nanobiotechnology. Offering fundamental and advanced information on environmental problems, challenges and bioremediation approaches used for the remediation of contaminated sites, it is a valuable resource for students, scientists and researchers engaged in microbiology, biotechnology and environmental sciences.

**Gifting Green** Sonja Hakala, 2009-11 Cloth Bags That Are Reusable, Beautiful and Simple to Make Cloth bags of all sorts are now part of our

daily lives. We take them to the grocery store, fill them at the mall, tote them on our wrists, and use them again and again. Noting the satisfaction we get when we can wrap our gifts in a special way, author Sonja Hakala has developed an easy method for you to make colorful and unique versions of drawstring bags that are sure to provoke ooohs and aaahs from everyone fortunate enough to receive one. (Or for you to love if you keep it for yourself.) Filled with colorful illustrations and clear instructions, Sonja explains how to make a basic bag with the sewing tools you already have, and fabric that you'll probably find stowed away in your stash or in your scrap pile. Then she adds three different ways to take this basic bag and make it even more special. In 12 easy-to-follow steps, you will cut, fold, fashion, and sew an eco-friendly, reusable, sturdy, and beautiful, fully-lined drawstring bag that reflects your unique taste. Think about it—this way of wrapping a gift will be like no one else's. Henry David Thoreau once said Beware of all enterprises that require new clothes and Sonja's philosophy about everything she designs is close to the same. Those of us who sew, design, and create accumulate all sorts of materials and tools. I set out to use what was at hand when I created these bags so that everyone, no matter their level of expertise, could make them. You can even hand sew them if you like. In addition to adding sparkle to a hostess gift or a present under the tree or as a way to make a birthday or shower gift even more special, these wonderful bags please their recipients throughout the year. Enjoy!

**Eco-Types** Emily Huddart Kennedy, 2022-10-04 Why acknowledging diverse eco-social relationships can help us overcome the political polarization that undermines our ability to protect the environment When we picture the ideal environmentalist, we likely have in mind someone who dedicates herself to reducing her own environmental footprint through individual choices about consumption—driving a fuel-efficient car, for example, or eating less meat, or refusing plastic straws. This is a benchmark that many aspire to—and many others reject. In Eco-Types, Emily Huddart Kennedy shows that there is more than one way to care about the environment, outlining a spectrum of eco-social relationships that range from engagement to indifference. Drawing on three years of interviews and research, Kennedy describes five archetypal relationships with the environment: the Eco-Engaged, often politically liberal, who have an acute level of concern about the environment, a moral commitment to protect it, and the conviction that an individual can make a difference; the Self-Effacing, who share the Eco-Engaged's concerns but not the belief in their own efficacy; the Optimists, often politically conservative, who are confident in their relationship with the environment, doubt the severity of environmental problems, and resent insinuations that they don't care; the Fatalists, who are pessimistic about environmental decline and feel little responsibility to adopt environment-friendly habits; and the Indifferent, who have no affinity for any part of the environmental movement. Kennedy argues that when liberals feel they have a moral monopoly on environmental issues, polarization results. If we are serious about protecting the planet, we must acknowledge that we don't all need to care about the environment in the same way.

*Your Eco-Friendly Home* Sid DAVIS, 2008-11-12 More and more people are becoming interested not just in living green, but particularly in living in a home that's ecologically sound. With thousands of new eco-minded houses being built, and the real estate market becoming more attuned to
