Active Materials Peter Fratzl,Michael Friedman,Karin Krauthausen,Wolfgang Schäffner,2021-12-20 What are active materials? This book aims to introduce and redefine conceptions of matter by considering materials as entities that ‘sense’ and respond to their environment. By examining the modeling of, the experiments on, and the construction of these materials, and by developing a theory of their structure, their collective activity, and their functionality, this volume identifies and develops a novel scientific approach to active materials. Moreover, essays on the history and philosophy of metallurgy, chemistry, biology, and materials science provide these various approaches to active materials with a historical and cultural context. The interviews with experts from the natural sciences included in this volume develop new understandings of ‘active matter’ and active materials in relation to a range of research objects and from the perspective of different scientific disciplines, including biology, physics, chemistry, and materials science. These insights are complemented by contributions on the activity of matter and materials from the humanities and the design field. Discusses the mechanisms of active materials and their various conceptualizations in materials science. Redefines conceptions of active materials through interviews with experts from the natural sciences. Contextualizes, historizes, and reflects on different notions of matter/materials and activity through contributions from the humanities. A highly interdisciplinary approach to a cutting-edge research topic, with contributions from both the sciences and the humanities.

The Physical Environment and Behavior Joachim F. Wohlwill,Gerald D. Weisman,2012-12-06 The field of Environment-and-Behavior This bibliography is aimed at the researcher and advanced student working in the field of environmental psychology, as it has come to be designated over the past decade. A more appropriate term might be environment-behavior studies, to suggest the important characteristic of this field as one that transcends the province of the psychologist, and brings together workers, as well as problems, methods, and concepts from a great diversity of disciplines and professional fields. Among these we may include geography and sociology, architecture, landscape architecture and planning, forestry,

natural resource management and leisure and recreation research -- to name only the most important of the diverse fields from which material for this bibliography has been drawn. This is in fact one of the primary reasons for our belief in the value of such a volume. The literature in the environment-behavior field is scattered through the most diverse sources, including not only the major periodical and monographic literature in each of the above-mentioned disciplines and professions (and others as well), but also a variety of more specialized publications of varying degrees of accessibility. Thus it seemed to us helpful to the researcher, teacher and student in this area to bring this far-flung literature together in a single volume, that might be used as a guide to the field. We aimed at a comprehensive treatment, including both basic and applied aspects, and relations of behavior both to the man-made or artificial and to the natural environment.

Managing Volunteers in Tourism Kirsten Holmes, Karen Smith, 2012-05-16 Recent years have seen an explosion in research on tourism volunteering. Volunteers are an essential part of tourism, whether they are volunteering in their local museum, at a sporting mega-event, as an airport ambassador, or travelling the global as a volunteer tourist. *Managing Volunteers in Tourism* reviews the latest research to highlight the key management issues and relate them to the tourism volunteering context. It includes previously under-researched forms of tourism volunteering such as meet-and-greeters, surf life-savers, conservation, festival, and information centre volunteers and volunTourists. The book develops through three distinct sections, the first of which begins by introducing the concept of volunteering and considering the variety of volunteer forms and settings within tourism. The next part picks up the organisational approach and examines volunteer program design and planning, volunteer motivation, recruitment and selection, training and development, reward and retention, and diversity management. The final part consists of ten case studies from leading international researchers and practitioners identifying best practice and key management challenges. Real-life examples and case studies throughout this book provide an in-depth examination of the challenges facing those managing tourism volunteers, making this book indispensable for current and future managers in the tourism industry.

Tunisian and Libyan Arabic Dialects: Common Trends - Recent Developments - Diachronic Aspects Ritt-Benmimoun, Veronika (ed.), 2017-05-26 This tripartite volume with 18 contributions in English and French is dedicated to Tunisian and Libyan Arabic dialects which form part of the so-called Maghrebi or Western group of dialects. There are ten contributions that investigate aspects of Tunisian dialects, five contributions on Libyan dialects,

and three comparative articles that go beyond the geographical and linguistic borders of Tunisia and Libya. The focus of Tunisian and Libyan Arabic Dialects is on linguistic aspects but a wider range of topics is also addressed, in particular questions regarding digital corpora and digital humanities. These foci and other subjects investigated, such as the syntactic studies and the presentation of recently gathered linguistic data, bear reference to the subtitle Common Trends – Recent Developments – Diachronic Aspects.

Divine Names on the Spot II F Porzia,C Bonnet,2023-09-14 English summary: Names, images, and narratives are intimately related and frequently polysemous. As pieces of information on the gods, they convey fragments of knowledge and attempts to interpret the multifaceted complexity of the divine world. In what Robert Parker describes as an archipelago, images and narratives are like compasses used to approach the mapping of the gods. The different contributions collected in this volume, dealing with the Greek and the Semitic worlds (the two main areas of the Mapping Ancient Polytheisms project), explore connections but also discrepancies between these different semantics, in order to highlight specificities and commonalities in the onomastic and iconographic languages. French description: Les noms, les images et les recits sont intimement lies et volontiers polysemiques. En tant qu'elements d'information sur les dieux, ils vehiculent des fragments de connaissance et constituent autant de tentatives d'interpretation de la complexite multiforme du monde divin. Dans ce que Robert Parker decrit comme un archipel, les images et les recits sont comme des boussoles qui facilitent la cartographie des dieux. Les differentes contributions rassemblees dans ce volume, traitant des mondes grec et semitique (les deux principaux domaines abordes dans le projet Mapping Ancient Polytheisms), explorent les connexions mais aussi les divergences existant entre ces differentes semantiques, afin de mettre en evidence les specificites et les points communs entre langage onomastique et langage iconographique.

Dependency Linguistics Kim Gerdes,Eva Hajiǒová,Leo Wanner,2014-09-15 This volume offers the reader a unique possibility to obtain a concise introduction to dependency linguistics and to learn about the current state of the art in the field. It unites the revised and extended versions of the linguistically-oriented papers to the First International Conference on Dependency Linguistics held in Barcelona. The contributions range from the discussion of definitional challenges of dependency at different levels of the linguistic model, its role beyond the classical grammatical description, and its annotation in dependency treebanks to concrete analyses of various cross-linguistic phenomena of syntax in its interplay with phonetics, morphology,

and semantics, including phenomena for which classical simple phrase-structure based models have proven to be unsatisfactory. The volume will be thus of interest to both experts and newcomers to the field of dependency linguistics and its computational applications.

Botticelli Past and Present Ana Debenedetti,Caroline Elam,2019-01-08 The recent exhibitions dedicated to Botticelli around the world show, more than ever, the significant and continued debate about the artist. Botticelli Past and Present engages with this debate. The book comprises four thematic parts, spanning four centuries of Botticelli's artistic fame and reception from the fifteenth century. Each part comprises a number of essays and includes a short introduction which positions them within the wider scholarly literature on Botticelli. The parts are organised chronologically beginning with discussion of the artist and his working practice in his own time, moving onto the progressive rediscovery of his work from the late eighteenth to the turn of the twentieth century, through to his enduring impact on contemporary art and design. Expertly written by researchers and eminent art historians and richly illustrated throughout, the broad range of essays in this book make a valuable contribution to Botticelli studies.

Re-Wiring The Ancient Novel, 2 Volume set Edmund Cueva,Stephen Harrison,Hugh Mason,William Owens,Saundra Schwartz,2019-02-28 The Fifth International Conference on the Ancient Novel, which was held in Houston, Texas, in the fall of 2015, brought together scholars and students of the ancient novel from all over the world in order to share new and significant developments about this fascinating field of study and its important place in the field of Classical Studies. The essays contained in these two volumes are clear evidence that the ancient novel has become a valuable part of the Classics canon and its scholarly attempts to understand the ancient Graeco-Roman world.

Damião de Gois Elisabeth Feist Hirsch,2012-12-06 Scholars have given relatively little attention to sixteenth-century Portuguese humanism, although Portugal's vital influence on the humanistic thirst for learning has been readily acknowledged. Through her heroic explorations of distant lands and dangerous sea routes, Portugal infected many humanists with the excitement of discovery, none more than Damiao de Gois, Portuguese student of history. Gois, although generally little known, was - in his life and finally as a victim of the Inquisition in Portugal - thoroughly representative of the course of sixteenth-century Erasmian humanism in Portugal; in addition he deserves recognition in his own right as a contributor to modern historiography. Portugal's explorations and the atmosphere of passion for discovery that prevailed in Lisbon had as strong an influence on Gois during his early years as that of the school of Erasmus, the prince of humanists who was eventually to become his personal friend and guide. Gois's two great chronicles of the Portuguese kings John II and Ma nuel I culminated a life spent as diplomat, composer, art collector, articulate pleader for religious tolerance, and scrupulous student of history. A factual report of Gois's life - in the main outlines accurate but not complete - exists in Portuguese, and a short resume of his life has been published in English, but so far no full study has been available in any language.

The Structures of Practical Knowledge Matteo Valleriani,2017-02-20 The Structures of Practical Knowledge investigates the nature of practical knowledge – why, how, when and by whom it is codified, and once codified, how this knowledge is structured. The inquiry unfolds in a series of fifteen case studies, which range in focus from early modern Italy to eighteenth century China. At the heart of each study is a shared definition of practical knowledge, that is, knowledge needed to obtain a certain outcome, whether that be an artistic or mechanical artifact, a healing practice, or a mathematical result. While the content of practical knowledge is widely variable, this study shows that all practical knowledge is formally equivalent in

following a defined workflow, as reflected in a construction procedure, a recipe, or an algorithm. As explored in the volume's fifteen contributions, there are three levels at which structures of practical knowledge may be understood and examined. At the most immediate level, there are the individual workflows that encompasses practical knowledge itself. Probing further, it is possible to examine the structure of practical knowledge as it is externalized and codified in texts, drawings, and artifacts such as models. Finally, practical knowledge is also related to social structures, which fundamentally determine its dissemination and evolution into new knowledge structures. The social structures of professionals and institutions represent the critical means by which practical knowledge takes form. These actors are the agents of codification, and by means of selection, appropriation, investment, and knowledge development, they determine the formation of new structures of practical knowledge. On a more abstract level, the creation of new knowledge structures is understood as constituting the basis for the further development of scientific knowledge. Rich in subject matter and incisive in the theory it lays out, this volume represents an important contribution to the history of science and epistemology. Individually, the fifteen case studies – encompassing the history of architecture, mining, brewing, glass production, printing, ballistics, mechanics, cartography, cosmology and astronomy – are replete with original research, and offer new insights into the history of science. Taken together, the contributions remodel historical epistemology as a whole, elucidating the underlining knowledge structures that transcend disciplinary boundaries, and that unite practitioners across time and space.
