Advances in Phage Therapy: Present Challenges and Future

Perspectives Andrzej Gorski, Petar Knezevic, Naomi Sulinger

Hoyle, Shigenobu Matsuzaki, 2021-08-02 This Research Topic is

dedicated to Prof. Elisabeth Kutter on the occasion of her 80th birthday. Dr. Kutter's career as a phage scientist has extended nearly 60 years. She has been a pioneer as a woman in science. She started to work with phage at the University of Rochester, New York working with Dr. Wiberg on radioisotopes making excellent progress in the field – progress which was even cited in Luria's 1969 Nobel Prize talk. Betty first encountered phage therapy during a visit to Georgia in 1990 which was part of a longer stay in the former Soviet Union under a US-USSR research exchange program. Dr. Kutter was one of the first Americans to advocate for phage therapy in the post antibiotic era. Betty started hosting the Evergreen International Phage meetings in Olympia, Washington, from 1975 onward, which helped to develop a strong phage community with participation increasing over the years to 350 at the 23rd biannual last year. Betty continues to be an active member in the phage community, sharing her experience and working with all of us toward her ultimate goal of making phage therapy available worldwide thus reducing the burden caused by antibiotic resistant bacterial infections.

Integrating Neglected Tropical Diseases Into Global Health and Development World Health Organization,World Health Organization. Department of Control of Neglected Tropical Diseases,2018-02-06 This report evaluates the changing global public health landscape; assesses progress towards the 2020 targets; and considers the possible core elements of a strategic vision to integrating neglected tropical diseases into the 2030 Agenda of the Sustainable Development Goals. Advances have been made through expanded interventions delivered through five public health approaches: innovative and intensified disease management; preventive chemotherapy; vector ecology and management; veterinary public health services; and the provision of safe water, sanitation and hygiene. In 2015 alone nearly one billion people were treated for at least one disease and significant gains were achieved in relieving the symptoms and consequences of diseases for which effective tools are scarce; important reductions were achieved in the number of new cases of sleeping sickness, of visceral leishmaniasis in South-East Asia and also of Buruli ulcer. The report also considers vector control strategies and discusses the importance of the draft WHO Global Vector Control Response 2017-2030. It argues that veterinary public health requires a multifaceted approach across the human-animal interface as well as a multisectoral program of work to protect and improve the physical, mental and social well-being of humans, including veterinary, water, sanitation and hygiene. Integration of activities and interventions into broader health systems is crucial, and despite challenges, has the potential to accelerate progress towards universal health coverage while advancing the 2030

Agenda. In short, this report drives the message home that no one must be left behind.

Ecosystem Services and Poverty Alleviation (OPEN ACCESS)

Kate Schreckenber, Georgina Mace, Mahesh Poudyal, 2018-04-27

Understanding how to sustain the services that ecosystems provide in support of human wellbeing is an active and growing research area. This book provides a state-of-the-art review of current thinking on the links between ecosystem services and poverty alleviation. In part it showcases the key findings of the Ecosystem Services for Poverty Alleviation (ESPA) programme, which has funded over 120 research projects in more than 50 countries since 2010. ESPA's goal is to ensure that ecosystems are being sustainably managed in a way that contributes to poverty alleviation as well as to inclusive and sustainable growth. As governments across the world map how they will achieve the 17 ambitious Sustainable Development Goals, most of which have poverty alleviation, wellbeing and sustainable environmental management at their heart, ESPA's findings have never been more timely and relevant. The book synthesises the headline messages and compelling evidence to address the questions at the heart of ecosystems and wellbeing research. The authors, all leading specialists, address the evolving framings and contexts for the work, review the impacts of ongoing drivers of change, present new ways to achieve sustainable wellbeing, equity, diversity, and resilience, and evaluate the potential contributions from conservation projects, payment schemes, and novel governance approaches across scales from local to national and international. The cross-cutting, thematic chapters challenge conventional wisdom in some areas, and

validate new methods and approaches for sustainable development in others. The book will provide a rich and important reference source for advanced students, researchers and policy-makers in ecology, environmental studies, ecological economics and sustainable development. The Open Access version of this book, available at <https://www.taylorfrancis.com/books/e/9780429016295>, has been made available under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license.

AI Approaches to the Complexity of Legal Systems - Models and Ethical Challenges for Legal Systems, Legal Language and Legal Ontologies, Argumentation and Software Agents Monica Palmirani,Ugo Pagallo,Pompeu Casanovas,Giovanni Sartor,2012-11-28 The inspiring idea of this workshop series, Artificial Intelligence Approaches to the Complexity of Legal Systems (AICOL), is to develop models of legal knowledge concerning organization, structure, and content in order to promote mutual understanding and communication between different systems and cultures. Complexity and complex systems describe recent developments in AI and law, legal theory, argumentation, the Semantic Web, and multi-agent systems. Multisystem and multilingual ontologies provide an important opportunity to integrate different trends of research in AI

and law, including comparative legal studies. Complexity theory, graph theory, game theory, and any other contributions from the mathematical disciplines can help both to formalize the dynamics of legal systems and to capture relations among norms. Cognitive science can help the modeling of legal ontology by taking into account not only the formal features of law but also social behaviour, psychology, and cultural factors. This book is thus meant to support scholars in different areas of science in sharing knowledge and methodological approaches. This volume collects the contributions to the workshop's third edition, which took place as part of the 25th IVR congress of Philosophy of Law and Social Philosophy, held in Frankfurt, Germany, in August 2011. This volume comprises six main parts devoted to the each of the six topics addressed in the workshop, namely: models for the legal system ethics and the regulation of ICT, legal knowledge management, legal information for open access, software agent systems in the legal domain, as well as legal language and legal ontology.

Systems Analysis and Design Kenneth E. Kendall, Julie E. Kendall, 2023 The eleventh edition of *Systems Analysis and Design* includes extensive changes inspired by the rapid transformations in the IS field over the past few years, and they are included as a response to the helpful input of our audience of adopters, students, and academic reviewers. Many new and advanced features are integrated throughout this new edition--

Some Organophosphate Insecticides and Herbicides IARC Working Group on the Evaluation of Carcinogenic Risks to Humans, International Agency for Research on Cancer, 2017 This volume of the IARC Monographs provides evaluations of the carcinogenicity of some organophosphate insecticides and herbicides,

including diazinon, glyphosate, malathion, parathion, and tetrachlorvinphos. Diazinon acts on a wide range of insects on crops, gardens, livestock, and pets, but most uses have been restricted in the USA, Canada, and the European Union since the 1980s. Glyphosate is the most heavily used agricultural and residential herbicide in the world, and has been detected in soil, air, surface water, and groundwater, as well as in food. Malathion is one of the oldest and most widely used organophosphate insecticides, and has a broad spectrum of applications in agriculture and public health, notably mosquito control. The insecticide parathion has been largely banned or restricted throughout the world due to toxicity to wildlife and humans. Tetrachlorvinphos is banned in the European Union, but continues to be used in the USA and elsewhere as an insecticide on animals, including in pet flea collars. The IARC Monographs Working Group reviewed epidemiological evidence, animal bioassays, and mechanistic and other relevant data to reach conclusions as to the carcinogenic hazard to humans of these agents.
