*Featured Reviews in "Mathematical Reviews" 1995-1996* Donald G. Babbitt, Jane E. Kister, This collection of reprinted 'Featured Reviews' published in Mathematical Reviews (MR) in 1995 and 1996 makes widely available informed reviews of some of the best mathematics published recently. 'Featured Reviews' were introduced in MR at the beginning of 1995 in part to provide some guidance to the current research-level literature. With the exponential growth of publications in mathematical research in the first half-century of MR, it had become essentially impossible for users of MR to identify the most important new research-level books and papers, especially in fields outside of the users' own expertise. This work identifies some of the best new publications, papers, and books that are expected to have a significant impact on the area of pure or applied mathematics with which researchers are concerned. All of the papers reviewed here contain interesting new ideas or applications, a deep synthesis of existing ideas, or any combination of these. The volume is intended to lead the user to important new research across all fields covered by MR.

**Featured Reviews in Mathematical Reviews 1997-1999** Donald G. Babbitt, Jane E. Kister, 2000-05-05 This second volume of Featured Reviews makes available special detailed reviews of some of the most important mathematical articles and books published from 1997 through 1999. Also included are excellent reviews of several classic books and articles published prior to 1970. Among

those reviews, for example, are the following: Homological Algebra by Henri Cartan and Samuel Eilenberg, reviewed by G. Hochschild; Faisceaux algebriques coherents by Jean-Pierre Serre, reviewed by C. Chevalley; and On the Theory of General Partial Differential Operators by Lars Hormander, reviewed by J. L. Lions. In particular, those seeking information on current developments outside their own area of expertise will find the volume very useful. By identifying some of the best publications, papers, and books that have had or are expected to have a significant impact in applied and pure mathematics, this volume will serve as a comprehensive guide to important new research across all fields covered by MR.

**Featured Player** Mae Clarke, 1996 Presents the result of conversations between writer James Curtis and Mae Clark (1910-1992), an actress who has the misfortune of being best known for a scene in which James Cagney grinds a grapefruit into her face, but whose talent and hard work in the acting business, in spite of personal misfortune, shine through. Includes an introduction by Curtis and bandw film stills. Annotation copyright by Book News, Inc., Portland, OR

*The Featured Guest* Eugene H. Nelson, 2013-07-12 The Featured Guest is a story of family and drama with mystery. It is also a story of life's lessons and how we deal with them. There are some that choose to handle issues in ways where the aim is to restore relationships and then there are many that choose to handle issues in very undesirable ways. Who is the Featured Guest in town? Well I can tell you this much, people who live in Crown Point, their aim is to have peace in their town, although we reside in a world where we experience inevitable means. If you are not on the same level as residents of Crown Point then you are indeed a Featured Guest in town. So sit back in your comfort zone and relax and enjoy. Look for the featured guest ; that individual is currently present in Crown Point, Indiana and the invitation has been accepted, but the point is. This person doesn't even have a clue that they are the Featured Guest.

Printing surface cuprous oxides featured liquid metal for non-enzymatic electrochemical glucose sensor Yiyao Luo, Gengcheng Liao, Zixuan Guo, Zongyu Huang, Long Ren, Xiang Qi, 2024-01-15 Electrochemical glucose sensors that rely on two-dimensional (2D) oxides have attracted significant attention owing to the strong sensing activity of 2D oxides, but their practical application is hindered by the complexity and high cost of fabrication of electrodes and integrated devices. Herein, a convenient and effective fabrication route that includes printing a Ga-based liquid metal (LM) as a current collection electrode, followed by growing electrochemically active 2D oxides directly on the surface of Ga-based LMs under mild conditions, is developed for non-enzyme-based electrochemical sensors. Specifically, 2D annealed Cu-Oxide (ACO) is successfully grown on a printed Ga electrode through a galvanic replacement reaction, resulting in the formation of a mechanically and electrically well-matched interface between the active sensing materials and the current collection substrate. Benefitting from the high quantity of 2D ACO and good charge transfer at the interface, the as-prepared ACO electrode exhibits attractive glucose sensing performance, with a wide linear range (1  $\mu\text{M}$ -10 mM) of effective detection, low detection limit down to 1  $\mu\text{M}$ , and high sensitivity of 0.87  $\mu\text{A}\cdot\text{mM}^{-1}\cdot\text{cm}^{-2}$ . Our study highlights the potential of using LMs in bio-sensing applications and provides a non-enzyme-based electrochemical biosensor platform for effective glucose detection in diets

and clinical diagnostic settings.

*Prosodic Featured Based Automatic Language Identification* Niraj Singh, 2015-11-02 Living beings inherently have the ability to differentiate languages as a part of human intelligence. Language Identification (LID) had been a science fiction in 1970's but today; it has been deployed in practical usage. The prosodic features of a speech are relatively simpler in their structure and are accredited to be very affective in some Language Recognition (LR) or LID tasks; irrespective of these features to be biased on numerous factors, as speaker's way of speaking, the culture and background of speaker. The book includes a series of experiments on several speech corpus with different classification or/and identification technique. At the end of each chapter, few review questions have been included and at the verge of the book, a short list of projects for research scholars has been mentioned in addition to a set of MCQs and Important questions. This book motivates for developing a multilingual LID system which can be widely used for betterment of mankind, particularly in the fields of Intelligence Police/Military) services and medical care. In an overview, we may assert that the book explores various experimental datasets, for, performance analysis of LID system with News speech and Natural Conversation speech; Joint Factor Analysis for LR on prosodic featured models and for automatic LID using i-Vector based prosodic system.

**The Haitians** Jean Casimir, 2020-09-29 In this sweeping history, leading Haitian intellectual Jean Casimir argues that the story of Haiti should not begin with the usual image of Saint-Domingue as the richest colony of the eighteenth century. Rather, it begins with a reconstruction of how individuals from Africa, in the midst of the golden age of imperialism, created a sovereign society based on political imagination and a radical rejection of the colonial order, persisting even through the U.S. occupation in 1915. The Haitians also critically retheorizes the very nature of slavery, colonialism, and sovereignty. Here, Casimir centers the perspectives of Haiti's moun andeyo—the largely African-descended rural peasantry. Asking how these systematically marginalized and silenced people survived in the face of almost complete political disenfranchisement, Casimir identifies what he calls a counter-plantation system. Derived from Caribbean political and cultural practices, the counter-plantation encompassed consistent reliance on small-scale landholding. Casimir shows how lakou, small plots of land often inhabited by generations of the same family, were and continue to be sites of resistance even in the face of structural disadvantages originating in colonial times, some of which continue to be maintained by the Haitian government with support from outside powers.

Designing Motherhood Michelle Millar Fisher, Amber Winick, 2021-09-14 More than eighty designs--iconic, archaic, quotidian, and taboo--that have defined the arc of human reproduction. While birth often brings great joy, making babies is a knotty enterprise. The designed objects that surround us when it comes to menstruation, birth control, conception, pregnancy, childbirth, and early motherhood vary as oddly, messily, and dramatically as the stereotypes suggest. This smart, image-rich, fashion-forward, and design-driven book explores more than eighty designs--iconic, conceptual, archaic, titillating, emotionally charged, or just plain strange--that have defined the relationships between people and babies during the past century. Each object tells a story. In striking images and engaging text, *Designing Motherhood* unfolds the compelling design histories and real-world uses of the objects that shape our reproductive experiences. The authors investigate the baby carrier, from the Snuggli to BabyBjörn, and the (re)discovery of the varied traditions of baby wearing; the tie-waist skirt, famously worn by a pregnant Lucille Ball on *I Love Lucy*, and essential for camouflaging and slowly normalizing a public pregnancy; the home pregnancy kit, and its threat to the authority of male gynecologists; and more. Memorable images--including historical ads, found photos, and drawings--illustrate the crucial role design and material culture plays throughout the arc of human reproduction. The book features a prologue by Erica Chidi and a foreword by Alexandra Lange. Contributors Luz Argueta-Vogel, Zara Arshad, Nefertiti Austin, Juliana
