**Trial By Fire: Forging American Close Air Support Doctrine, World War I Through September 1944** Major Philip W. Wielhouwer, 2014-08-15 Proper doctrine for close support of American ground forces by airpower has been a tumultuous issue since the first days of combat aircraft. Air and ground leaders struggled with interservice rivalry, parochialism, employment paradigms, and technological roadblocks while seeking the optimum balance of missions given the unique speed, range, and flexibility of aircraft. Neither ground force concepts of airpower as self-defense and extended organic artillery, nor air force theories focused on command of the air and strategic attack fit the middle ground of close air support (CAS), leaving a doctrinal void prior to American combat in World War II. This thesis focuses on the critical period from September 1939 through the doctrinal and practical crucible of North Africa, which eventually produced a resoundingly successful system. Theoretical and practical changes in organization and command, airpower roles, and the tactical air control system are examined, with subarea focus on cooperation and communications technology. Upon examination, discerning leadership, able to transcend earlier compromises and failures, emerges as the essential element for CAS success during the war. While many airpower concepts proved valid, air-ground cooperation through liaison proved indispensable, a lesson repeated even today.

**Integrating Basing, Support, and Air Vehicle Requirements** Morton B. Berman, J. M. Halliday, Rand Corporation, 1985 This report describes and demonstrates a new methodology for increasing the effectiveness of future fighters that must face growing enemy threats in Europe and the Third World. Unlike traditional methods, this new methodology integrates changes in the design of air vehicles with changes in the basing and support systems they will use. The methodology calls not only for such conventional measures as the speed, acceleration, altitude, payload, and maneuverability of the air vehicle, but also for such new measures as the flexibility, mobility, sortie generation capability, aircraft ground survivability, and cost of the air vehicle, as well as its basing methods and support structure.

**The Great Rat Race for Europe** Joey Maddox, 2011 The Great Rat Race for Europe: Stories of the 357th Fighter Group (Sortie One) tells the true stories of the Yoxford Boys of the 357th Fighter Group; arguably the best Army Air Force fighter group in the European Theater during World War Two. Aces Kit Carson, Bud Anderson, Johnny England, Pete Peterson, Chuck Yeager and others from this elite group of tigers eventually became famous after the

war, while other Yoxford Boys just melted back into the scenery that was the American post war years. Those were the lucky ones as scores of these brave, young American lads flying their P-51 Mustangs into combat against the Luftwaffe never saw home again as the result of this epic air war over Europe. Their stories are all here including Leonard Kit Carson's account of The Great Rat Race which helped to break the back of the Luftwaffe (from his fantastic book Pursue and Destroy), the strange and sad end of decorated fighter ace Dittie Jenkins who safely returned from his last mission against the Nazis only to be killed while celebrating with an impromptu air show over Station 373 at Leiston, and the first hand account of life in a Stalag Luft (prisoner of war camp) with Colonel Henry Spicer, the irascible commanding officer of the American section of the POW camp (and one-time 357th Fighter Group Commanding Officer) who drove the German officers to the brink with his rock solid spirit of rebellion and the love and admiration of his men. Fly into weather so thick that the ducks are walking with Pete Peterson, one of the leading aces of the Group, as he walks you through a hair-raising landing on Leiston Field with zero visibility and three inexperienced pilots on his wing. Then 357th fighter pilot Joe Shea recaptures the common boredom ridden hours and terror stricken moments faced by replacement pilots of the Group during their first combat missions, including Shea's account of his last encounter, eyeball to eyeball, with a German pilot in an Me-262 jet fighter as it slid over his wing and lined up perfectly in his gun sight. Relive the

greatest (as well as the worst) days of the 8th Air Force's first long range Mustang fighter outfit in short stories written by the pilots of the 357th Fighter Group, their families, and this author in this collection of memories and tall tales of the famous Yoxford Boys.

*Tactical Dispersal of Fighter Aircraft* John M. Halliday, RAND Corporation, 1987 This Note examines U.S. Air Force policy on the basing of tactical fighter aircraft. Specifically, it addresses the risks of losses to both aircraft and sorties that are implicitly accepted by commanders and policymakers when they base fighters within range of potential attackers. It also deals with one potential alternative to the current static basing mode--tactical dispersal--and with the organizational impediments to it. The author applies the concepts of risk and uncertainty to plausible attack scenarios for main operating bases and dispersed sites, and he discusses policy issues that must be addressed if high sortie rates are to be sustained during the early days of a conflict. He recommends that a program be designed to empirically test the assumptions used in the models for evaluating basing policy. Keywords: Air Force facilities, Tactical analyses, Fighter aircraft, Risk, Probability. (sdw).

Viper Force , 2011-06-24 The pilot of the F-16 Viper, which is the U.S. Air Force's frontline fighter and attack aircraft, is at the pinnacle of combat aviation. Viper Force tells the story of what it takes to become an F-16 pilot and what it's like to fly and fight the Viper in combat. Because the

F-16 is a dual-purpose combat aircraft, its pilot must master two widely divergent disciplines: air-to-air flying against enemy fighters to maintain control of the air over the battle field and air-to-ground flying in support of ground forces, soldiers, and marines, in contact. The crucible for creation of the Viper pilot is the air force's 56th Fighter Wing, the successor to World War II's 56th Fighter Group, the legendary Zemke's Wolpack, which also flew a fighter/attack aircraft, the P-47 Thunderbolt. Viper Force also provides an up-close and personal look at the F-16 Viper squadron at war with information on its missions, command and control in the air, and the crucially important but often overlooked maintenance and ordnance ground crew.

**Absorbing and Developing Qualified Fighter Pilots** Richard S. Marken, William W. Taylor, John A. Ausink, Lawrence M. Hanser, Clarence R. Anderegg, 2007-10-03 What qualifications determine whether a fighter pilot is experienced? Surveys of expert pilots revealed that, while flying time is an element of the experience needed for both combat and staff jobs, other things are also important. The Air Force needs to measure and credit different types of experience-including time spent in advanced simulator systems-when revising its definitions of pilot experience.

**Relating Ranges and Airspace to Air Combat Command Mission and Training Requirements** Albert A. Robbert, 2001 This volume presents an analytical

structure developed by RAND and the Air Combat Command in order to help the US Air Force articulate its aggregate needs for ranges and airspace, assess the adequacy of its existing assets and justify new of existing assets.

*Israeli F-15 Eagle Units in Combat* Shlomo Aloni,2013-01-20 Post-Yom Kippur War, Israel purchased the F-15 Eagle, the then world's best air-to-air fighter, in an effort to prevent another surprise attack from the air. For the first time in its history the IDF/AF operated a fighter that was a full generation ahead of opposing interceptors in the region. The first 'kill' F-15 Baz (Buzzard) arrived in Israel in 1976 and soon proved its worth in combat. Israeli Baz pilots were credited with 12.5 kills between 1979 and 1981, with 33 victories following during the June 1982 Lebanon War. Despite substantial combat, no Israeli F-15 has ever been lost to enemy action. In the 1990s the US government supplied the IDF/AF with the F-15I Ra'am (Thunder) to fulfill the long-range surface-to-surface missile mission post-Desert Storm. From A to I, the extremely capable, and combat-tested, Israeli F-15 force will continue to deter potential enemies well into the foreseeable future. This book examines the history and development of these units.

*The Pentagon Paradox* James Perry Stevenson,1993 Did the U.S. Navy avoid Congress's explicit direction to navalize the winning design in a flyoff

competition - by lying to Congress with the argument that the winner was not carrier capable - and then develop the losing aircraft into an even worse fighter for its carrier squadrons? To find the answer James Stevenson, an experienced aviation writer, dug through government files and interviewed key players to present this hard-hitting, behind-the-scenes account of the development of one of the Navy's current front-line aircraft. His investigation exposes the politics of Pentagon weapons procurement, a process that pits service against service, the military against Congress, admirals against generals, pilots against engineers, hard liners against reformers. This book provides a developmental history of the F-18 Hornet from drawing board to its results in Desert Storm. It is the story of a multi-billion-dollar aircraft-design war between those military officers who insist that America's interests will be protected best by sophisticated aircraft, even if America can afford fewer of them, and a group known as the Fighter Mafia, who claim that larger numbers have always won in warfare and that for equal dollars America can only produce greater numbers if each one is less sophisticated. He shows that by picking the YF-17 - and renaming the F-17 as the F-18 - over the clearly superior YF-16, the Navy antagonized the Air Force, Congress, and its own F-14 community, and sparked a major legal battle. Undeterred, the Navy took the light, cheap YF-17 and loaded it with technology and weight, which produced an F-18 that has less maneuverability, less acceleration, a range no better than the 1952-vintage A-4, and costs

almost three times as much as the F-16. From its first flight in 1978, the F-18 performance continued to degrade. Nevertheless, in 1992 the Navy asked for additional money to modify the F-18 as the F-18E/F. This request was in reality funding for a brand-new aircraft, which Stevenson calls the F-19, designed to get back to the original requirements and help bail out the financially troubled McDonnell Douglas. In this highly readable study, Stevenson takes the reader into the Pentagon's corridors of power, where test results are distorted, history rewritten, and requirements changed to match aircraft performance, and the public's trust and treasure squandered. Fascinating yet sobering, The Pentagon Paradox will appeal to everyone interested in the military establishment, the future of U.S. forces, and how tax dollars are spent.

Cost, Capability, and the Hunt for a Lightweight Ground Attack Aircraft  
Steven J. Tittel, 2009 Since 2001, U.S. Air Force fighter aircraft have flown combat sorties with abnormally high flight durations while participating in Operations Iraqi Freedom and Enduring Freedom. These longer sortie durations have added previously unanticipated flight time to aging airframes thereby reducing the expected service life of the U.S. Air Force's legacy fighter fleet. This study examines the costs and benefits of fielding a propeller driven lightweight ground attack aircraft to support air operations in counter insurgency and stability operations. Fielding a lightweight ground attack aircraft could enable the U.S. Air Force to redeploy the bulk of its

legacy fighter fleet to home stations and resume non-contingency operations. This would effectively reduce annual flight times and thereby extend expected service life. This study will use a document review to determine the expected economic impact, combat capability, survivability, and potential roles and missions relative to fielding a lightweight ground attack aircraft.

**Assessing Unit Readiness** Carl Johan Dahlman, David E. Thaler, 2000 Ongoing allegations of problems with readiness in the current environment of constrained resources and demanding contingency requirements have driven efforts to characterize the effect of this environment of representative operational unit and to capture the features in a readiness management system. A broad recipe for assessing readiness involves defining what is healthy, evaluating the current and future status, and identifying where that status deviates from a healthy state. Results indicate that the fighter wing faces a mismatch between the tasks it must accomplish and the resources at its disposal. Without the proper standards and the right metrics for tracking how units can meet those standards, senior management will be unable to identify and assess shortfalls in readiness throughout the force.

*Fighter Aces of the Great War* Stephen Wynn, Tanya Wynn, 2020-04-30 History has recorded that the first ever powered flight took place at Kitty Hawk in America, on 17 December 1903 and was carried out by the Wright brothers, Orville and Wilbur, who were aircraft designers and manufacturers. By the time of the outbreak of the First World War, aviation was only eleven years

old. The daddy of battlefield warfare until that point in time had been the cavalry, a position it maintained even as war was declared on the Western Front. Aircraft were not initially seen as an offensive weapon and were instead used by both sides as observation platforms, or to take aerial photographs from. Even when they were eventually used in an offensive capacity, they did not have machine guns attached to them; if the crew wanted to open fire then they had to use a pistol or rifle. As the war progressed so the use of aircraft changed from being an observational tool, to that of a fighter and bomber aircraft - something that had never been foreseen at the outbreak of the war. The book then looks at the fighter aces from all sides. These were pilots who had been credited with shooting or forcing down a minimum of five enemy aircraft, of which there were hundreds. While some of these aces survived, many of them were killed. The most famous fighter ace of all is without doubt the German pilot known as the Red Baron, Manfred von Richthofen.

**Pe-2 Guards Units of World War 2** Dmitriy Khazanov, Aleksander Medved, 2013-02-20 Petlyakov's Pe-2 was the most numerous Soviet twin-engined bomber of World War 2, the aircraft being used as a dive-bomber, ground attack platform and dedicated reconnaissance type. The first examples entered service in August 1940, and by the time production came to end in late 1945, no fewer than 10,547 examples had been built. These equipped more than 80 bomber air regiments, and of the latter, two were accorded Guards Air Corps

status, as were six air regiments. Amongst the former was the 2nd Guards Bomber Air Corps, which was commanded by the legendary General Polbin, who was twice made a Hero of the Soviet Union. Pe-2 bomber and reconnaissance versions (the latter in service with four Guards reconnaissance air regiments of the Air Force and one regiment of Naval Aviation) were extensively used from the frozen Arctic north to the balmy Crimea front. A number of Pe-2 also saw brief combat against Japan in the final weeks of World War 2.

**USAF McDonnell Douglas F-4 Phantom II** Peter E. Davies, 2013-04-20 In many respects the most successful, versatile and widely-used combat aircraft of the post-war era the F-4 Phantom II was quickly adopted by the USAF after its spectacular US Navy introduction. Its introduction to USAF squadrons happened just in time for the Vietnam conflict where USAF F-4Cs took over MiG-fighting duties from the F-100 Super Sabre. Although the F-4 was never intended as a dog-fighter to tangle with light, nimble, gun-armed MiGs it was responsible for destroying 109 MiGs in aerial combat. At the end of their careers many of the survivors from the 3,380 'land-based' Phantoms were converted into target drones for training purposes. New aircraft were also built for West Germany, Iran and Israel. The USAF's experience with the Phantom showed clearly that the air-to-air fighter was still a necessity and its decision to fund its successor, the McDonnell-Douglas F-15 Eagle (as well as the F-16 Fighting Falcon and F-22A Raptor) was heavily influenced by the lessons of US and

other Phantom pilots in combat.
