Gasotransmitters in Plants Lorenzo Lamattina, Carlos García-Mata, 2016-09-01 This book describes the three gasotransmitters nitric oxide (NO), hydrogen sulphide (H₂S) and carbon monoxide (CO) and their function as intracellular signalling molecules in plants. Common properties are shared by NO, H₂S and CO: they are beneficial at low concentrations but hazardous in higher amounts; they are

small molecules of gas; they can freely cross cell membranes; their effects do not rely on receptors; they are generated enzymatically and their production is regulated; their functions can be mimicked by exogenous application; and their cellular effects may or may not be mediated by second messengers, but have specific cellular and molecular targets. In plants, many aspects of the biology of gasotransmitters remain completely unknown and generate intriguing questions, which will be discussed in this book.

Five-Finger Discount Helene Stapinski, 2002-03-12 Now a PBS documentary, this astonishing memoir of growing up in rough-and-tumble Jersey City “will steal your heart” (People) With deadpan humor and obvious affection, *Five-Finger Discount* recounts the story of an unforgettable New Jersey family of swindlers, bookies, embezzlers, and mobster-wannabes. In the memoir Mary Karr calls “a page-turner,” Helene Stapinski ingeniously weaves the checkered history of her hometown of Jersey City—a place known for its political corruption and industrial blight—with the tales that have swirled around her relatives for decades. Navigating a childhood of toxic waste and tough love, Stapinski tells an extraordinary tale at once heartbreaking and hysterically funny. Praise for *Five-Finger Discount* “By turns hilarious and alarming, [Helene Stapinski’s] book reads on the surface like something by Damon Runyon and Elmore Leonard, with a dark undertow of real-life pain and disillusion.”—Michiko Kakutani, *The New York Times* “It’s a brilliant book, a darling book. It is the blessedly modest chronicle of a magical consciousness that seems to have been born pulling diamonds out of the muck, hearing angels’ voices in the fiercest thunder. . . . I adored every word of this wondrous book. Get it. Read

it.”—Michael Pakenham, The Baltimore Sun “In the tradition of . . . Rita Mae Brown and Amy Tan, Ms. Stapinski is an exciting writer, unabashedly candid, and at the same time unashamedly self-contained. Five-Finger Discount is a must-read.”—Victoria Gotti, The New York Observer “What [Frank] McCourt did for Limerick, Ireland, Helene Stapinski does for Jersey City.”—The Star-Ledger “Hugely entertaining.”—The Sunday Times (London)

Forest Has A Song Amy Ludwig VanDerwater, 2013-03-26 A spider is a “never-tangling dangling spinner / knitting angles, trapping dinner.” A tree frog proposes, “Marry me. Please marry me... / Pick me now. / Make me your choice. / I’m one great frog / with one strong voice.” VanDerwater lets the denizens of the forest speak for themselves in twenty-six lighthearted, easy-to-read poems. As she observes, “Silence in Forest / never lasts long. / Melody / is everywhere / mixing in / with piney air. / Forest has a song.” The graceful, appealing watercolor illustrations perfectly suit these charming poems that invite young readers into the woodland world at every season.

Algorithmic and Aesthetic Literacy Lydia Schulze Heuling, Christian Filk, 2021-03-29 Algorithmic and

Aesthetic Literacy is a selection of texts aiming to extend current understandings of algorithmic and aesthetic literacy. The volume presents a wide array of transdisciplinary perspectives on computational and aesthetic practices and thinking. Drawing on computer and educational science, artistic research, designing and crafting, this collection delves deeply into societal and educational challenges in the wake of the digital transformation. The volume brings together diverse approaches and viewpoints to stimulate dialogue and awareness of the manifold ways in which algorithmic processes have become part of our lives. By extending our ability to respond to a data-driven world in creative and non-habitual ways, we will be better equipped to re-imagine and shape our collective future as meaningful and fulfilling.

New Dark Age James Bridle, 2019-05-21 “New Dark Age is among the most unsettling and illuminating books I’ve read about the Internet, which is to say that it is among the most unsettling and illuminating books I’ve read about contemporary life.” – New Yorker As the world around us increases in technological complexity, our understanding of it diminishes. Underlying this trend is a single idea:

the belief that our existence is understandable through computation, and more data is enough to help us build a better world. In reality, we are lost in a sea of information, increasingly divided by fundamentalism, simplistic narratives, conspiracy theories, and post-factual politics. Meanwhile, those in power use our lack of understanding to further their own interests. Despite the apparent accessibility of information, we're living in a new Dark Age. From rogue financial systems to shopping algorithms, from artificial intelligence to state secrecy, we no longer understand how our world is governed or presented to us. The media is filled with unverifiable speculation, much of it generated by anonymous software, while companies dominate their employees through surveillance and the threat of automation. In his brilliant new work, leading artist and writer James Bridle surveys the history of art, technology, and information systems, and reveals the dark clouds that gather over our dreams of the digital sublime.

Abiotic Stress Signaling in Plants: Functional Genomic Intervention Girdhar K. Pandey,Manoj Prasad,Amita Pandey,Maik Boehmer,2016-08-08 Abiotic stresses such as high temperature, low-temperature, drought and salinity limit crop productivity worldwide. Understanding plant responses to these stresses is essential for rational engineering of crop plants. In Arabidopsis, the signal transduction pathways for abiotic stresses, light, several phytohormones and pathogenesis have been elucidated. A significant portion of plant genomes (Arabidopsis and rice were mostly studied) encodes for proteins involves in signaling such as receptor, sensors, kinases, phosphatases, transcription

factors and transporters/channels. Despite decades of physiological and molecular effort, knowledge pertaining to how plants sense and transduce low and high temperature, low-water availability (drought), water-submergence, microgravity and salinity signals is still a major question for plant biologist. One major constraint hampering our understanding of these signal transduction processes in plants has been the lack or slow pace of application of molecular genomic and genetics knowledge in the form of gene function. In the post-genomic era, one of the major challenges is investigation and understanding of multiple genes and gene families regulating a particular physiological and developmental aspect of plant life cycle. One of the important physiological processes is regulation of stress response, which leads to adaptation or adjustment in response to adverse stimuli. With the holistic understanding of the signaling pathways involving not only one gene family but multiple genes or gene families, plant biologist can lay a foundation for designing and generating future crops, which can withstand the higher degree of environmental stresses (especially abiotic stresses, which are the major cause of crop loss throughout the world) without losing crop yield and productivity. Therefore, in

this e-Book, we intend to incorporate the contribution from leading plant biologists to elucidate several aspects of stress signaling by functional genomics approaches.

Families Linda Mort, Janet Morris, 2012-09 The family is the microcosm of a child's world, making it an ideal early years theme. It enables children to discover that, although they have a unique place in the world, they still share much in common with others. The practical activities include helping children to learn their addresses and telephone numbers, making individual and group books, looking for details in photographs, making models, considering behaviour, matching and ordering numbers, sizes and quantities and miming actions associated with family life. Every effort has been made to respect different family lifestyles and to avoid stereotyping. All of the play activities are designed to develop important preschool skills and positive relationships and are linked to the Early Learning Goals of the Statutory Framework for the Early Years Foundation Stage, revised by the Department of Education for September 2012.

Zinc Finger Proteins Shiro Iuchi, Natalie Kuldell, 2007-03-06 In the early 1980s, a few scientists started working on a *Xenopus* transcription factor, TFIIIA. They soon discovered a novel domain associated with zinc, and named this domain zinc finger. The number of proteins with similar zinc fingers grew quickly and these proteins are now called C2H2, Cys2His2 or classical zinc finger proteins. To date, about 24,000 C2H2 zinc finger proteins have been recognized. Approximately 700 human genes, or more than 2% of the genome, have been estimated to encode C2H2 zinc finger proteins. From the beginning these proteins were thought to be numerous, but no one could have predicted such a huge number. Perhaps thousands of scientists are now working on C2H2 zinc finger proteins from various viewpoints. This field is a good example of how a new science begins with the insight of a few scientists and how it develops by efforts of numerous independent scientists, in contrast to a policy-driven scientific project, such as the Human Genome Project, with goals clearly set at its inception and with work performed by a huge collaboration throughout the world. As more zinc finger proteins were discovered, several subfamilies, such as C2C2, CCHC, CCCH, LIM, RING, TAZ, and

FYVE emerged, increasing our understanding of zinc fingers. The knowledge was overwhelming. Moreover, scientists began defining the term zinc finger differently and using various names for identical zinc fingers. These complications may explain why no single comprehensive resource of zinc finger proteins was available before this publication.

Proteomics of Spermatogenesis G. S. Gupta, 2006-07-02 Recent developments of experimental techniques in cellular and molecular biology have made it possible to understand the molecular biology of male gametogenesis in greater detail. This book focuses on the description of specialized proteins, which are dominantly and/or specifically expressed in germ cells and localized in spermatozoa. There is an urgent need to classify proteins of spermatogenic cells with a view of their functions, and their applications in the regulation of fertility and in understanding infertility. The understanding of structural properties of male germ cell specific proteins can offer vulnerable points for targeted intervention in testis without generalized effects on stages of spermatogenesis. Besides targeted action in male germ cells, sperm specific proteins and polypeptides may also offer potential application in the development

of a contraceptive vaccine.

Environmental Microbiology and Biotechnology Anoop Singh, Shaili Srivastava, Dheeraj
