Cut and Fold Techniques for Pop-Up Designs Paul Jackson,2014-02-17 Introducing techniques for making pop-ups from one sheet of card, the third title in this series on paper engineering takes folding techniques into the third dimension. Each chapter introduces a new technical idea and shows how that technique can be adapted in many different ways, or combined with techniques from earlier chapters. These 3-D techniques can be incorporated into any design where typography and/or illustration are used, including mail-shots, personal publicity, invitations, business cards and greetings cards. With their emphasis on surface design over complex cutting, the pop-ups have an instant appeal for designers. Following the elegant, easy-to-follow style of Paul Jackson's other titles for Laurence King, *Cut and Fold Techniques for Pop-Up Designs* is an essential resource for marketing professionals and design students.

Things to Make and Do in the Fourth Dimension Matt Parker,2014-12-02 A book from the stand-up mathematician that makes math fun again! Math is boring, says the mathematician and comedian Matt Parker. Part of the problem may be the way the subject is taught, but it's also true that we all, to a greater or lesser extent, find math difficult and counterintuitive. This counterintuitiveness is actually part of the point, argues Parker: the extraordinary thing about math is that it allows us to access logic and ideas beyond what our brains can instinctively do—through its logical tools we are able to reach beyond our innate abilities and grasp more and more abstract concepts. In the absorbing and exhilarating *Things to Make and Do in the Fourth Dimension*, Parker sets out to convince his readers to revisit the very math that put them off the subject as fourteen-year-olds. Starting with the foundations of math familiar from school (numbers, geometry, and algebra), he reveals how it is possible to climb all the way up to the topology and to four-dimensional shapes, and from there to infinity—and slightly beyond. Both playful and sophisticated, *Things to Make and Do in the Fourth Dimension* is filled with captivating games and puzzles, a buffet of optional hands-on activities that entices us to take pleasure in math that is normally only available to those studying at a university level. *Things to Make and Do in the Fourth Dimension* invites us to re-learn much of what we missed in school and, this time, to be utterly enthralled by it.

A Mathematical Tapestry Peter Hilton,Jean Pedersen,2010-07-22 This easy-to-read 2010 book demonstrates how a simple geometric idea reveals fascinating connections and results in number theory, the mathematics of polyhedra, combinatorial geometry, and group theory. Using a systematic paper-folding procedure it is possible to construct a regular polygon with any number of sides. This remarkable algorithm has led to interesting proofs of certain results in number theory, has been used to answer combinatorial questions involving partitions of space, and has enabled the authors to obtain the formula for the volume of a regular tetrahedron in around three steps, using nothing more complicated than basic arithmetic and the most elementary plane geometry. All of these ideas, and more, reveal the beauty of mathematics and the interconnectedness of its various branches. Detailed instructions, including clear illustrations, enable the reader to gain hands-on experience constructing these models and to discover for themselves the patterns and relationships they unearth.

The Robot and the Bluebird David Lucas,2008 There was once a robot with a broken heart, good for nothing but expiring slowly on a scrap heap. Then one winter's day a migrating bluebird lands on his shoulder, too exhausted to go further. The robot offers her shelter in the place where his heart used to be, and her warmth and singing and companionship stir up the last glimmer of energy the robot has; he carries her across snowy wastes to the warm south, whereupon his strength dies out finally. And there he still stands today like an old hollow tree, home every year to singing birds.

Max and the Tag-Along Moon Floyd Cooper,2015-03-10 Experience the wonder of the moon following you home with a Coretta Scott King Award-winning illustrator! Great for Father's Day and Grandparent's Day! Max loves his grandpa. When they must say good-bye after a visit, Grandpa promises Max that the moon at Grandpa's house is the same moon that will follow him all the way home. On that swervy-curvy car ride back to his house, Max watches as the moon tags along. But when the sky darkens and the moon disappears behind clouds, he worries that it didn't follow him home after all. Where did the moon go—and what about Grandpa's promise? Floyd Cooper received the Coretta Scott King Award for *The Blacker the Berry*, three Coretta Scott King Honors for *Brown Honey* in *Broomwheat Tea*, *Meet Danitra Brown*, and *I Have Heard of a Land*, and an NAACP image award. In *Max and the Tag-Along Moon*, his lush paintings perfectly capture the wonder of the moon, the love between grandfather and grandson, and that feeling of magic every child experiences when the moon follows him home.. "Coretta Scott King Award-winning Cooper has created a gentle, comforting story that will reassure children that those who love us are always with us." —Booklist "Cooper uses his signature style to illustrate both the landscape--sometimes viewed from the car windows or reflected in the vehicle's mirror--and the expressive faces of his characters. Coupled with the story's lyrical text, this is a lovely mood piece. A quiet, warm look at the bond between grandfather and grandson." —Kirkus Reviews

Flexagons Inside Out Les Pook,2003 Flexagons are hinged polygons that have the intriguing property of displaying different pairs of faces when they are flexed. Workable paper models of flexagons are easy to make and entertaining to manipulate. Flexagons have a surprisingly complex mathematical structure and just how a flexagon works is not obvious on casual examination of a paper model. Flexagons may be appreciated at three different levels. Firstly as toys or puzzles, secondly as a recreational mathematics topic and finally as the subject of serious mathematical study. This book is written for anyone interested in puzzles or recreational maths. No previous knowledge of flexagons is assumed, and the only pre-requisite is some knowledge of elementary geometry. An attractive feature of the book is a collection of nets, with assembly instructions, for a wide range of paper models of flexagons.
