**Flying Cars** Andrew Glass,2015 Humans have always wanted to fly. As soon as there were planes and cars, many people saw a combination as the next step for personal transportation, and visionary engineers and inventors did their best to make the flying car (or the roadable plane) a reality. This book is a breezy account of hybrid vehicles and their creators, and of the intense drive that kept bringing inventors back to the drawing board despite repeated failures and the dictates of common sense. Illustrated with archival photos, this entertaining survey takes readers back as far as Icarus and forward into the present day, with a look toward the future. Includes author's note, source notes, bibliography, index.

**What Would it Take to Build a Flying Car?** Megan Ray Durkin,2021-01-28 In science fiction, flying cars let people soar over traffic jams and get to where they're going quickly. **Flying Cars, Amphibious Vehicles and Other Dual Mode Transports** George W. Green,2010-07-15 It wasn't very long after the first commercially viable automobiles came on the scene that ambitious engineers began to dream of vehicles that could travel not only on land but also in the air, or by water. For a century, talented designers have created unique dual purpose vehicles for land, water and air (in various pairings) for both civil and military applications. Sometimes converted from standard vehicles, sometimes beginning as clean-sheet designs, these machines have met the engineering and economic challenges of dual-mode travel with varying degrees of success. This book describes a fascinating array of these vehicles from the United States and abroad, including flying automobiles, roadable aircraft, amphibious vehicles, hovercraft, road-rail trains, and triphibious inventions.

**Flying Cars** Patrick J. Gyger,2011-08-01 This book may sound like a work of science fiction, but it's all true. Cars designed to be flown and aircraft designed to be driven have been created surprisingly often, particularly in the United States, where the unfettered optimism of the 1930s and 1950s allowed such fanciful ideas to flourish from time to time. This handsome book covers the subject in depth for the first time, revealing the stories of many doomed ventures, supported by a wealth of intriguing photographs together with wonderful artwork from comics, popular science magazines and science-fiction novels.

**Flying Cars for Everyone in the Near Future** A. C. Rogers, Jr.,2014-06-30 As human population continues to increase here on earth, congested streets and highways will abound at a rate well beyond our current plans for solution. Something is drastically needed to relax traffic congestion. An Aircar that can be housed in your garage; can takeoff quietly from in front of your house without a runway; and take you to work and back every day is conceptualized herein. A design specification for an Aircar is developed herein by first identifying the impracticalities of everyone having an Aircar for everyday use and then sets forth the technological means for overcoming each of the identified impracticalities. An Aircar design concept is presented based on a design specification. The one great importance of this book is that it identifies large number of applications currently under development, many of which have not been oriented toward any specific application.. Such technologies include nanotube materials, electrogravity propulsion, Lithium Air batteries, free energy electrical generators, plasma actuators for boundary layer flow control and noise reduction and electronic guidance and safety control. Thus, the development of the Aircar will bring to the entire aeronautical industry the full development of such relatively far out technologies.

**VEHICLES OF THE AIR** VICTOR LOUGHEED,1909

Aviation in the Literature and Culture of Interwar Britain Michael McCluskey,Luke Seaber,2020-12-01 Aviation in the Literature and Culture of Interwar Britain looks at the impact of aviation in Britain and beyond through the 1920s and 1930s. This book considers how in this period flying went from a weapon of war to an extensive industry that included civilian air travel, air mail delivery, flying shows and campaigns to create 'airmindedness'. Essays look at these developments through the work of writers, filmmakers and flyers and examines the airminded modernism that marked this radical period. Its fourteen chapters include studies of texts by Virginia Woolf, George Orwell, Elizabeth Bowen, W.H. Auden, T.H. White and John Masefield; accounts of the annual RAF Display at Hendon and the Schneider Trophy; and the achievements of celebrity flyers such as Amy Johnson. This collection provides a fresh perspective on the interwar period by bringing analysis of aviation and airmindedness to the study of British literature, history, modernism, mobilities and the history of technology and transportation.
