Framing the Challenge of Urban Flooding in the United States National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Policy and Global Affairs, Program on Risk, Resilience, and Extreme Events, Committee on Urban Flooding in the United States, 2019-04-29 Flooding is the natural hazard with the greatest economic and social impact in the United States, and these impacts are becoming more severe over time. Catastrophic flooding from recent hurricanes, including Superstorm Sandy in New York (2012) and Hurricane Harvey in Houston (2017), caused billions of dollars in property damage, adversely affected millions of people, and damaged the economic well-being of major metropolitan areas. Flooding takes a heavy toll even in years without a named storm or event. Major freshwater flood events from 2004 to 2014 cost an average of \$9 billion in direct damage and 71 lives annually. These figures do not include the cumulative costs of frequent, small floods, which can be similar to those of infrequent extreme floods. Framing the Challenge of Urban Flooding in the United States contributes to existing knowledge by examining real-world examples in specific metropolitan areas. This report identifies commonalities and variances among the case study metropolitan areas in terms of causes, adverse impacts, unexpected problems in recovery, or effective mitigation strategies, as well as key themes of urban flooding. It also relates, as appropriate, causes and actions of urban flooding to existing federal resources or policies.

Under The Skin of the Architect: Exposing the Builder's Framing Bones Marques

Vickers, 2015-01-14 "Under The Skin of the Architect: Exposing the Builder's Framing Bones" is a pictorial showcase of the steel framing and construction phases involved with the Frank Gehry designed Walt Disney Concert Hall completed in October, 2003 in downtown Los Angeles. Photographer Marques Vickers captures images of the construction stages between 2001 and 2003 showcasing the bent steel girder framework, which formed the structural bones of the building. Gehry's signature layer of titanium panels establishing the masterpiece project as a definitive creative icon for the early 21st century completed the framework. Accompanying the over 80 images from the Disney construction are thirteen images from another Gehry project, the Ohr-O'Keefe Museum of Art in Biloxi, Mississippi. The images were photographed following the devastating effects of Hurricane Katrina. At the time of the storm, the museum was only partially completed, but unlike most of the coastal properties, survived generally intact despite a casino barge washing into the semi-constructed facility. The focus of Vickers photographic work is to stress the durability and sustainability of Gehry's project beyond its evident aesthetic appeal. Vickers notes, "The internal framing structure is as fascinating as the finished appearance. The bent and shaped grids and girders fit acutely into place as a well-orchestrated whole and then disappear completely from viewing upon the layering of external panel coating."
