Simple and Free Jen Hatmaker,2021 Why do we pursue more when we'd be happier with less? In this updated edition of 7, now in hardcover for the first time, New York Times bestselling author Jen Hatmaker tells the story of how she and her family tried to combat overindulgence--and what they learned along the way about living a truly meaningful life. Simple & Free is the true story of how Jen Hatmaker (along with her family) identified seven areas of excess--food, clothes, spending, media, possessions, waste, and stress--and made seven simple choices to fight back against the modern-day diseases of greed, materialism, and overindulgence. So, what's the payoff from living a deeply reduced life? It's the discovery of a greatly increased connection with God--a call toward simplicity and generosity that transcends social experiment to become a radically better life. In this new edition, written not just for readers of faith but for everyone who craves a gentler, simpler life, Hatmaker shares how sustainability and generosity still impact and challenge her today. Annotated throughout with new reflections from the author, this book offers thoughtful insights on the vastly different world of Simple & Free from back when it was first published as 7, and considers the dramatically different space Hatmaker occupies now. XUV Pump-Probe Experiments on Diatomic Molecules Kirsten Schnorr,2014-12-29 This book explores the relaxation dynamics of inner-valence-ionized diatomic molecules on the basis of extreme-ultraviolet pump-probe experiments performed at the free-electron laser (FEL) in Hamburg. Firstly, the electron rearrangement dynamics in dissociating multiply charged iodine molecules is studied in an experiment that made it possible to access charge transfer in a thus far unexplored quasimolecular regime relevant for plasma and chemistry applications of the FEL. Secondly the lifetime of an efficient non-radiative relaxation process that occurs in weakly bound systems is measured directly for the first time in a neon dimer (Ne₂). Interatomic Coulombic decay (ICD) has been identified as the dominant decay mechanism in inner-valence-ionized or excited van-der-Waals and hydrogen bonded systems, the latter being ubiquitous in all biomolecules. The role of ICD in DNA damage thus demands further investigation, e.g. with regard to applications like radiation therapy.
