Get There Early Bob Johansen, 2007-08-20 These days, every leader struggles with a paradox: you can't predict the future, but you have to be able to make sense of it to thrive. In the age of the Internet, everyone knows what's new, but to succeed you have to be able to sort out what's important, devise strategies based on your own point of view, and get there ahead of the crowd. Bob Johansen shares techniques the Institute for the Future has been refining for nearly forty years to help leaders navigate what, borrowing a term from the Army War College, he calls the VUCA world: a world characterized by volatility, uncertainty, complexity, and ambiguity. As the institute's ten-year forecast makes clear, leaders now face fewer problems with neat solutions and more dilemmas: recurring, complex, messy, and puzzling situations. *Get There Early* lays out the institute's three-step Foresight to Insight to Action Cycle that will allow readers to sense, make sense of, and win with dilemmas. Johansen offers specific techniques, ranging from storytelling to simulation gaming, as well as real-world examples to help readers turn the VUCA world on its head through creative use of vision, understanding, clarity, and agility. This book offers hope for leaders facing the constant tension—a dilemma in itself—between judging too soon and deciding too late.

A History of Place in the Digital Age Stuart Dunn, 2019-02-13 *A History of Place in the Digital Age* explores the history and impact of Geographic Information Systems (GIS) and related digital mapping technologies in humanities research. Providing a historical and methodological discussion of place in the most important primary materials which make up the human record, including text and artefacts, the book explains how these materials frame, form and communicate location in the age of the internet. This leads in to a discussion of how the World Wide Web distorts and skews place, amplifying some voices and reducing others. Drawing on several connected case studies from the early modern period to the present day, the spatial writings of early modern antiquarians are explored, as are the roots of approaches to place in archaeology and philosophy. This forms the basis for a review of place online, through the complex history of the invention of the internet, in to the age of the interactive web and social media. By doing so, the book explores the key themes of spatial power and representation which these technologies frame. *A History of Place in the Digital Age* will be of interest to scholars, students and practitioners in a variety of humanities disciplines with an interest in understanding how technology can help them undertake research on spatial themes. It will be of interest as primary work to historians of technology, media and communications.

**Crowdsourcing Geographic Knowledge** Daniel Sui, Sarah Elwood, Michael Goodchild, 2012-08-10 The phenomenon of

volunteered geographic information is part of a profound transformation in how geographic data, information, and knowledge are produced and circulated. By situating volunteered geographic information (VGI) in the context of big-data deluge and the data-intensive inquiry, the 20 chapters in this book explore both the theories and applications of crowdsourcing for geographic knowledge production with three sections focusing on 1). VGI, Public Participation, and Citizen Science; 2). Geographic Knowledge Production and Place Inference; and 3). Emerging Applications and New Challenges. This book argues that future progress in VGI research depends in large part on building strong linkages with diverse geographic scholarship. Contributors of this volume situate VGI research in geography's core concerns with space and place, and offer several ways of addressing persistent challenges of quality assurance in VGI. This book positions VGI as part of a shift toward hybrid epistemologies, and potentially a fourth paradigm of data-intensive inquiry across the sciences. It also considers the implications of VGI and the exaflood for further time-space compression and new forms, degrees of digital inequality, the renewed importance of geography, and the role of crowdsourcing for geographic knowledge production.

**Mediated Geographies and Geographies of Media** Susan P. Mains, Julie Cupples, Chris Lukinbeal, 2015-10-12 This is the first comprehensive volume to explore and engage with current trends in Geographies of Media research. It reviews how conceptualizations of mediated geographies have evolved. Followed by an examination of diverse media contexts and locales, the book illustrates key issues through the integration of theoretical and empirical case studies, and reflects on the future challenges and opportunities faced by scholars in this field. The contributions by an international team of experts in the field, address theoretical perspectives on mediated geographies, methodological challenges and opportunities posed by geographies of media, the role and significance of different media forms and organizations in relation to socio-spatial relations, the dynamism of media in local-global relations, and in-depth case studies of mediated locales. Given the theoretical and methodological diversity of this book, it will provide an important reference for geographers and other interdisciplinary scholars working in cultural and media studies, researchers in environmental studies, sociology, visual anthropology, new technologies, and political science, who seek to understand and explore the interconnections of media, space and place through the examples of specific practices and settings.

Looking at the underlying theories, histories, politics, ideologies, tactics, strategies, and aesthetics, the book takes an expansive view of media activism. It explores how varieties of activism are mediated through communication technologies, how activists deploy strategies for changing the structures of media systems, and how governments and corporations seek to police media activism. **The Politics of Mapping** Bernard Debarbieux,Irene Hirt,2022-05-20 Maps and mapping are fundamentally political. Whether they are authoritarian, hegemonic, participatory or critical, they are most often guided by the desire to have control over space, and always involve power relations. This book takes stock of the knowledge acquired and the debates conducted in the field of critical cartography over some thirty years. The Politics of Mapping includes analyses of recent semiological, social and technological innovations in the production and use of maps and, more generally, geographical information. The chapters are the work of specialists in the field, in the form of a thematic analysis, a theoretical essay, or a reflection on a professional, scientific or militant practice.

From mapping issues for modern states to the digital and big data era, from maps produced by Indigenous peoples or migrant-advocacy organizations in Europe, the perspectives are both historical and contemporary.

**Thinking Big Data in Geography** Jim Thatcher, 2018 Thinking Big Data in Geography offers a practical state-of-the-field overview of big data as both a means and an object of research, with essays from prominent and emerging scholars such as Rob Kitchin, Renee Sieber, and Mark Graham. Part 1 explores how the advent of geoweb technologies and big data sets has influenced some of geography's major subdisciplines: urban politics and political economy, human-environment interactions, and geographic information sciences. Part 2 addresses how the geographic study of big data has implications for other disciplinary fields, notably the digital humanities and the study of social justice. The volume concludes with theoretical applications of the geoweb and big data as they pertain to society as a whole, examining the ways in which user-generated data come into the world and are complicit in its unfolding. The contributors raise caution regarding the use of spatial big data, citing issues of accuracy, surveillance, and privacy.

Stories in Stone Jelle Zeilinga de Boer, 2009-07-21 This book describes how early settlers discovered and exploited Connecticut's natural resources. Their successes as well as failures form the very basis of the state's history : Chatham's gold played a role in the acquisition of its Charter, and Middletown's lead helped the colony gain its freedom during the Revolution. Fertile soils in the Central Valley fueled the state's development into an agricultural power house, and iron ores discovered in the western highlands helped trigger its manufacturing

eminence. Geology not only shaped the state's physical landscape, but also provided an economic base and played a cultural role by inspiring folklore, paintings, and poems. It also describes impact of past climates, earthquakes, and meteorites on the people of that state.
