Green Light! Martin Wolfe,2016-11-11 In *Green Light!* Martin Wolfe gives us the big picture of World War II airborne warfare in Europe through the lens of one unit, a squadron typical of some sixty others. Troop carrier squadrons delivered paratroopers behind enemy lines, tugged gliders into battle zones, and, between combat operations, freighted up to the front everything from food to artillery shells and carried back wounded infantrymen and newly freed slave laborers. Wolfe's firsthand account is an engaging and informative narrative that goes beyond the facts to investigate the feelings of the tightly knit unit. He also describes the management and training techniques that prepared the squadron for its role in four of the five main invasions of Nazi Europe. In all the literature about World War II, this is the first account to show how all levels of a squadron functioned—clerks as well as pilots, maintenance mechanics as well as flying crew chiefs, the mess hall as well as headquarters. In addition, Wolfe's is the first book to show the interplay between unit experience and high command theory—what units like the 81st Troop Carrier Squadron could actually accomplish and how concepts of airborne warfare changed at Supreme Headquarters. He explains why and how it was not until the last airborne invasion, in March 1945, that the full potential of the troop carrier was reached. Wolfe melds the recollections of ninety veterans of this squadron with a general history of Allied airborne forces in World War II. Through their words, *Green Light!* paints vivid portraits of the real men of the war, not the Rambos or Sad Sacks of popular culture. And through the retelling of their experiences, the book shows that the truism war is hell does not hold for all soldiers all the time.

Sugar Gliders!! The Ultimate Owner's Guide,

Aerotowing Gliders John Marriott,2011-06-01 This is an extract from the main text) This book on aerotowing gliders was written because there is little reference material published about the subject worldwide. So because of the lack of published information, I thought it important to gather the wealth of knowledge that is out there on the subject, collate it and present it to our community in the interests of safety and efficiency. The book is intended as a comprehensive guide to glider towing operations, with that all important emphasis on safety. The intent is to provide all the relevant information in one straightforward, easy to read book. The notes are intended to be very generic and non-country specific. Even though local procedures differ, hopefully the information should be useful to any glider tug pilot, anywhere in the world. Each gliding organisation has its operating environment and problems, therefore should adapt, further or improve these suggestions to suit their own needs. It is fundamental that every tug pilot be a person who is both trustworthy and highly reliable as it is a flying task with huge responsibility placed on the pilot. Aerotowing is expensive, can be noisy and has its own special hazards. These factors have a bearing on the very existence of gliding and it is therefore essential that glider aerotowing be carried out safely, efficiently and thoughtfully, paying particular regard to our neighbours. Your particular aerotowing should of course be carried out in accordance with national laws, regulations, procedures and in conjunction with your organisations flying rules. As the pilots in command of an aircraft you are ultimately responsible for the safe conduct of the flight and the actions that you choose to take. The glider pilots requirements should of course be accommodated as far as possible. Glider aerotowing should be good for your general flying skills. As a flying and gliding instructor for over twenty five years, I have noticed that most glider tug pilots are often also glider pilots and have above average handling and situational awareness skills. Flying tugs should of course also be quite good fun! It is hoped that this comprehensive book will meet the ground school requirements of any current or future glider towing ratings.

On the Wing Dr. David E. Alexander,2015 *On the Wing* is the first book to take a comprehensive look at the evolution of flight in all four groups of powered flyers: insects, pterosaurs, birds, and bats.--Book jacket.

The Pegasus and Orne Bridges Neil Barber, 2014-05-31 This WWII history chronicles a daring airborne mission that was vital to the success of Operation Tonga, D-Day, and the liberation of France. When the British Army landed on Sword Beach in Normandy, their only exit eastward required passage across the River Orne and the Caen Canal. But the two bridges fording these waterways—the Pegasus and Orne Bridges—were heavily guarded and wired for demolition in case of a Germans retreat. Capturing these bridges would be next to impossible. Operation Deadstick, conducted by Major John Howard and his company of Oxford and Buckinghamshire Light Infantry, was a superbly daring, brilliantly executed 'coup de main' assault. The glider-borne troops not only seized both bridges but faced a ferocious and prolonged German counterattack. Neil Barber, a military historian and expert in British airborne operations, uses extensive personal accounts to tell this incredible story of Allied victory. Covering events and operations from Ranville in the East to Benouville in the West, Pegasus and Orne Bridges chronicles the combat of the 7th, 12th and 13th Parachute Battalions and

reinforcements such as the Commandos, seaborne engineers and the Warwicks.

Born in the Jungles of Burma Andrew Wax,2010-08-11 This researcher examined the evolution of warfare in an unforgiving environment, necessitating an innovative method of warfare never attempted on a large scale. It details the early history of air supply and support near the end of WWI up to and including the war in Europe in 1939 and the expanding war in Asia following the December 1941 Japanese attack on Pearl Harbor and subsequent offensives in southeast Asia. The China-Burma-India Theater (CBI) became an important component of Allied efforts. Low in Allied priority, the difficulties encountered by the Southeast Asia Command (SEAC) increased. Burma, a British colony, was a region with few all-weather roads; the only rail lines available were in enemy hands 150 miles inside Japanese lines. Temperatures reached 110 degrees Fahrenheit with rainfall as much as 200 inches per year. Additionally, the nearest friendly seaport was more than 500 miles away. The Allied offensive, scheduled for the spring of 1944, incorporated a multi-pronged ground attack on three different Japanese fronts. To achieve success, it was essential to develop the only logical means of sustainability for ground forces: Air Supply and Support. Described herein are the efforts of the United States Army Air Forces (USAAF) and the Royal Air Force (RAF), creating a singularly unique air unit: Air Commando 1. The coordination of Allied tactics and doctrines were worked out with a clear delineation of the chain of command. When Air Commando 1 arrived in India, the framework that became the Allied offensive, codenamed “Operation THURSDAY” was laid. For the survival of soldiers contracting one of the numerous diseases (Burma has the largest number of snakes per square mile) or suffering from combat related wounds and injuries, it was essential to receive quick medical attention. It was in the CBI that SEAC established an effective method of air evacuation that made the difference between life and death. The research unearthed most of the heretofore publicly unknown aspects of the campaign, explored in the author’s thesis, which indicate that the first sustained effort of air supply and support deep within enemy-held territory established a vital method of warfare deployed in subsequent wars.
