The Coastlines of the World with Google Earth Anja M. Scheffers, Sander R. Scheffers, Dieter H. Kelletat, 2012-03-06 Far away shores, exotic islands or adventurous sea voyages - coasts are the destination of dreams for millions of people around the globe. Large numbers of people also call coasts their home; in many countries a narrow coastal strip is densely populated making these places vulnerable to marine natural hazards such as storms or tsunamis. The book Coastlines of the World with Google Earth aims to draw people's attention (within and outside of the science community) towards coastal sciences and spark interest for the extraordinary diversity and beauty of coastal environments. The book illustrates the fascinating variety of coastal landscapes using images from Google Earth's virtual globe that allow us to explore the world and demonstrate knowledge and applications of coastal science in many different fields in an engaging visual tour. The book of Anja and Sander Scheffers and Dieter Kelletat is a true cornucopia for everyone, both scientists and laymen, interested in coastal geomorphology. On the one hand, it documents the enormous significance of Google Earth for coastal science issues and shows how powerful this tool is for visualizing coastal features and processes. On the other hand, the reader gets a vivid insight in the many varieties of coastal science and its applications. This is especially true with regard to coastal hazards such as extreme events and global sea level rise knowing that the vulnerability of coastal zones has dramatically increased during the past decades. The fact that the book is so attractive and inspiring to both beginners and experts is also due to the huge experience that the authors have gained during their manifold research activities. Andreas Vött, Johannes Gutenberg-Universität Mainz, Germany This book will have great appeal to coastal researchers, at both beginning and advanced stages, because it integrates Google satellite imagery with coastal marine classification and in-depth studies by the authors from many parts of the world. The world's coastline is well represented in this book which has a truly global perspective of unique, dramatic and commonplace coastal landforms. The authors in collaboration with the publisher have prepared a very handsome volume that will no doubt become a classic in the fullness of time. This book represents one of the first efforts to utilize Google images in a scientific manner to illustrate the diversity of coastal morphologies on a worldwide basis. The plethora of color satellite images, block diagrams, and oblique photography makes this book a valuable resource for a wide array of specialists that will want to have handy access to this unique work. This coastal compendium is an illustrated tour de force that belongs on researchers' bookshelves as well as on coffee tables for casual enjoyment. Tornado Hunter Stefan Bechtel, Tim Samaras, 2009 METEOROLOGY. With climate change and global warming creating more frequent and more violent storms, there is a huge readership for weather disasters such as hurricanes and tornadoes. This book will appeal to the audience for the bestseller Perfect Storm. This page-turning story of tornado chaser and National Geographic grantee Tim Samaras opens with a chilling, play-by-play description of the F5 tornado that wiped off the map the town of Manchester, North Dakota, on June 24, 2003. Stefan Bechtel, author of the acclaimed Roar of the Heavens teams with Samaras to reveal the heart and people of the town, the terror of the descending funnel, Samaras' fearless chase to the tornado's core, and the ingenious equipment he masterminded to record the inner workings of a tornado - to aid in future detection, avoidance, and destruction.

Storms Ann Merk, Jim Merk, 1994 This book introduces storms, including rainstorms, thunderstorms, tornadoes, hurricanes, and blizzards.

Divine Wind Kerry Emanuel, 2005-09-01 Imagine standing at the center of a Roman coliseum that is 20 miles across, with walls that soar 10 miles into the sky, towering walls with cascades of ice crystals falling along its brilliantly white surface. That's what it's like to stand in the eye of a hurricane. In Divine Wind, Kerry Emanuel, one of the world's leading authorities on hurricanes, gives us an engaging account of these awe-inspiring meteorological events, revealing how hurricanes and typhoons have literally altered human history, thwarting military incursions and changing the course of explorations. Offering an account of the physics of the tropical atmosphere, the author explains how such benign climates give rise to the most powerful storms in the world and tells what modern science has learned about them. Interwoven with this scientific account are descriptions of some of the most important hurricanes in history and relevant works of art and literature. For instance, he describes the 17th-century hurricane that likely inspired Shakespeare's The Tempest and that led to the British colonization of Bermuda. We also read about the Galveston Hurricane of 1900, by far the worst natural calamity in U.S. history, with a death toll between 8,000 and 12,000 that exceeded the San Francisco earthquake, the Johnstown Flood, and the Okeechobee Hurricane co Boasting more than one hundred color illustrations, frommbined. Boasting more than one hundred color illustrations, from ultra-modern Doppler imagery to classic paintings by Winslow Homer, Divine Wind captures the profound effects that hurricanes have had on humanity. Its fascinating blend of history, science, and art will appeal to weather junkies, science buffs, and everyone who read Isaac's Storm.

Using Google Earth in Libraries Eva H. Dodsworth, Andrew Nicholson, 2015-09-01 Using Google Earth in Libraries: A Practical Guide for Librarians is for public, school, academic, and special libraries serving from the elementary level through adult levels. Although articles have been written about specific subjects and specific library projects, this is the first published that offer a one-stop-shop for utilizing this online product for library-related purposes. Librarians reading this book will gain the Google Earth skills required to be able to not only use it themselves, but also teach others in how to use this online technology.

Chapter 8: Thunderstorms, Mid-Latitude Cyclones and Hurricanes Michael Pidwirny, 2023-07-25 Chapter 8: Thunderstorms, Mid-Latitude Cyclones and Hurricanes of the eBook Understanding

Physical Geography. This eBook was written for students taking introductory Physical Geography taught at a college or university. For the chapters currently available on Google Play presentation slides (Powerpoint and Keynote format) and multiple choice test banks are available for Professors using my eBook in the classroom. Please contact me via email at Michael.Pidwirny@ubc.ca if you would like to have access to these resources. The various chapters of the Google Play version of Understanding Physical Geography are FREE for individual use in a non-classroom environment. This has been done to support life long learning. However, the content of Understanding Physical Geography is NOT FREE for use in college and university courses in countries that have a per capita GDP over \$25,000 (US dollars) per year where more than three chapters are being used in the teaching of a course. More specifically, for university and college instructors using this work in such wealthier countries, in a credit-based course where a tuition fee is accessed, students should be instructed to purchase the paid version of this content on Google Play which is organized as one of six Parts (organized chapters). One exception to this request is a situation where a student is experiencing financial hardship. In this case, the student should use the individual chapters which are available from Google Play for free. The cost of these Parts works out to only \$0.99 per chapter in USA dollars, a very small fee for my work. When the entire textbook (30 chapters) is finished its cost will be only \$29.70 in USA dollars. This is far less expensive than similar textbooks from major academic publishing companies whose eBook are around \$50.00 to \$90.00. Further, revenue generated from the sale of this academic textbook will provide "the carrot" to entice me to continue working hard creating new and updated content. Thanks in advance to instructors and students who abide by these conditions. IMPORTANT - This Google Play version is best viewed with a computer using Google Chrome, Firefox or Apple Safari browsers.

Hurricanes and Tornadoes Keith Elliot Greenberg,1994 Examines the various types of devastating weather that can affect North America, discussing the differences between hurricanes and tornadoes, their catastrophic impact, storm prediction, and survival techniques.

Hurricane Watch Jack Williams, Bob Sheets, 2001-07-31 The ultimate guide to the ultimate storms, Hurricane Watch is a fascinating blend of science and history from one of the world's foremost meteorologists and an award-winning science journalist. This in-depth look at these awe-inspiring acts of nature covers everything from the earliest efforts by seafarers at predicting storms to the way satellite imaging is revolutionizing hurricane forecasting. It reveals the latest information on hurricanes: their effects on ocean waves, the causes of the variable wind speeds in different parts of the storm, and the origins of the super-cooled shafts of water that vent at high altitudes. Hurricane Watch is a compelling history of man's relationship with the deadliest storms on earth. Includes: - The story of the nineteenth-century Cuban Jesuit whose success at predicting the great cyclones was considered almost mystical. - A new look at Isaac Cline, whose infamous failure to predict the Galveston Hurricane left him obsessed with the devastating effects of storm surge. - The story of the Hurricane Hunters, including the first man ever to deliberately fly into a hurricane. - A complete account of how computer modeling has changed hurricane tracking. - A history of Project Stormfury: the only significant, organized effort to reduce the damaging strength of severe hurricanes. - A unique firsthand account of Hurricane Andrew by both authors, who were at the National Hurricane Center when Andrew struck. - A listing of the deadliest storms in history.

Storm John Withington,2016-09-15 Gales, cyclones, blizzards, tornados, and hurricanes—few things demonstrate the awesome power of nature like a good storm. Devastating, diverse, and sometimes appearing completely out of nowhere, storms are also a source of both scientific and aesthetic wonder. In this book, John Withington takes an in-depth and unique look at the nature of storms and the impact that they have—both physical and cultural—on our lives. Withington shows how storms have changed the course of human history. From Roman times to the modern day, he shows how their devastating effects have wiped out entire communities, changed the fates of battle, and even reset the entire planet. He also shows how beneficial they have been to us: as an important feature of our atmosphere and climate, but also as a source of inspiration for nearly every artist who has ever lived, from Homer to Rembrandt, in works from the Old Testament to Robinson Crusoe.

Beautifully illustrated, this book offers a fascinating look at Earth's most fearsome events. Historic Storms of New England Sidney Perley, 1891

Wild Storm Richard Castle, 2014-05-13 Derrick Storm, the guy the CIA calls on when it wants something investigated domestically, is thirty-three thousand feet in the air, returningfrom a rock climbing vacation in the Swiss Alps, when the plane spirals into anose-dive. Storm uses his climbing gear to tether himself to the wing andheroically save the plane and all the people on board. Sadly, Storm isnot available to come to the aid of the three other planes that have crashedunder similar circumstances, killing everyone on board. Interestingly, many of the victims are powerful people in politics, business and religious groups. The always elusive Jedidiah Jones, leader of the National ClandestineService that has no name, calls on Storm to investigate. Storm determines that an unknown extremisthas secured enough of the rare earth element promethium to create a laser withthe power to shoot down planes from the ground. The problem swiftlybecomes a global one as four more planes crash in the Arabia Desert. Details, intuition and courage lead Storm to Monaco, Panama City and Egypt as he meets beautiful women, rides angry camels and rescues innocentvictims in his valiant effort to track down the maniacal mind behind the terrorism.

Landscapes of the Anthropocene with Google Earth Andrew Goudie,2023-12-06 This book considers the meaning of the term, considers the value and characteristics of Google Earth, and discusses the main driving forces of landscape change. Google Earth provides a means whereby one can identify changes in the landscapes of Earth over recent decades. This has been a time of great human activity, and landscapes have been transformed as a result of such factors as land use and land-cover change, climate change, the intensive harnessing of new energy sources, population pressures, and globalization. Many geologists now believe that the whole Earth System is being changed and that there is thus a need to introduce the concept of the Anthropocene. It then looks at specific landscape types, including rivers, coasts, lakes, deserts, tundra, and glaciers.

Learning from the Impacts of Superstorm Sandy J. Bret Bennington, E. Christa Farmer, 2014-10-31 Learning from the Impacts of Superstorm Sandy summarizes first results from studies of Superstorm Sandy, including: tide gauge measurements of storm surge, stable isotope variation in precipitation, analysis of the effect of beach nourishment among other factors on structural damage, and comparison with past storms through sediment analysis. This book gives a multi-dimensional treatment of scientific results of studies of Superstorm Sandy, and it is a valuable reference for oceanographers, coastal geologists, climatologists, dynamic meteorologists, paleotempostologists, sedimentary geologists, geomorphologists and emergency managers who need to better understand the storm and its effects in order to be prepared for similar events in the future.
