**Hands-On Science Mysteries for Grades 3 - 6** James Robert Taris,Louis James Taris,2006-08-18 In Hands-On Science Mysteries for Grades 3-6, the authors connect science to real-world situations by investigating actual mysteries and phenomena, such as the strange heads on Easter Island, the ghost ship Mary Celeste, and the “Dancing Stones” of Death Valley. The labs are designed to encourage the development of science inquiry, in which students will observe, take notes, make diagrams, interpret data, and arrive at solutions, and include extensions for further investigation.

*The Science of Rick and Morty* Matt Brady,2019-10-01 Explore the real science behind the Cartoon Network phenomenon Rick and Morty—one of television’s most irreverent, whip-smart, and darkly hilarious shows—and discover how close we are to Rick’s many experiments becoming a reality. Adult Swim’s Rick and Morty is one of the smartest (and most insane) shows on television. Genius alcoholic Rick Sanchez and his hapless grandson Morty have explored everything from particle physics to human augmentation and much more in their intergalactic adventures through the multiverse. With biting humor and plenty of nihilism, Rick and Morty employs cutting-edge scientific theories in every episode. But, outside of Rick’s garage laboratory, what are these theories truly about and what can they teach us about ourselves? Blending biology, chemistry, and physics basics with accessible—and witty—prose, The Science of Rick and Morty equips you with the scientific foundation to thoroughly understand Rick’s experiments from the show, such as how we can use dark matter and energy, just what is intelligence hacking, and whether or not you can really control a cockroach’s nervous system with your tongue. Perfect for longtime and new fans of the show, this is the ultimate segue into discovering more about our complicated and fascinating universe.

**Hands-on Physical Science** Laurie E. Westphal,2008 Introduce your students to the fascinating world of physical science with these creative and adventurous experiments in chemistry and physics. Grades 4-8

The Mad Scientist teaches: Chemistry Experiland,2010-09-23 Chemistry is the study of matter in the form of atoms, molecules, and the interactions that happen between them called chemical reactions. In its vast sense, chemistry is actually the science of all the available materials that make up the world around you. This includes all ‘matter’ that you can see, hear, smell, taste, and touch! Matter is everything that has mass and occupies space and all matter is composed out of the basic building blocks we call ‘atoms’. Understanding how to predict and explain how matter change when they react to form new substances, is what chemistry and chemists are all about! The 50 projects contained in this science experiment e-book cover a wide range of Chemistry topics; from Chemical reactions to Elements & Compounds... there are even experiments on chemical power and endothermic reactions all designed for young students from grade 1 to 8! With this book, you are sure to find a project that interests you. When you are interested in a certain science topic, you will have more fun, and learn more, too! With the help of this book, you will construct many weird, wonderful and wacky experiments that you can have hours of fun with! Amongst many others, you will use chromatography to predict the ‘fall’ colour of a green leaf tree, make your own stalactites to learn about evaporation, make glue, toothpaste and caramel to experiment with chemical reactions, and use various substances to test if a substance is an acid or base! Other fun experiments include: growing your own crystals on a piece of string, testing for the presence of iron in breakfast cereals, writing secret messages to your friends with your own invisible ink, using iodine to test for the presence of starch in foods, making a detector to predict the possibility of rain, making an exothermic reaction with vinegar & steel wool, using chemistry to make your dull coins shine, electro-plating a nail, making a ‘lava lamp’ with oil & water, making a fluid for copying newsprint to blank sheets of paper, making paper, snuffing out a candle by ‘pouring’ carbon dioxide gas over it, Testing how much Vitamin C is contained in various fruit juices and many, many more! When making these gadgets, you’ll discover that science is a part of every object in our daily lives, and who knows, maybe someday you will become a famous inventor too! Science can be real simple and is actually only about understanding the world you live in! Science certainly does not need to be complicated formulas, heavy text books and geeky guys in white lab coats with thick glasses. Science experiments are an awesome part of science that allows you to engage in cool and exciting hands on learning experiences that you are sure to enjoy and remember! By working through the science experiments in this book, you will learn about science in the best possible way – by doing things yourself. Designed with safety in mind, most of the items you will need for the experiments, such as jars, aluminium foil, scissors and sticky tape, you can find around your home. Others, such as magnets, lenses or a compass, you will be able to buy quite cheaply at a hobby shop or hardware store.

Childhood, Science Fiction, and Pedagogy David W. Kupferman,Andrew Gibbons,2019-04-24 This book invites readers to both reassess and reconceptualize definitions of childhood and pedagogy by imagining the possibilities - past, present, and future - provided by the aesthetic turn to science fiction. It explores constructions of children, childhood, and pedagogy through the multiple lenses of science fiction as a method of inquiry, and discusses what counts as science fiction and why science fiction counts. The book examines the notion of relationships in a variety of genres and stories; probes affect in the convergence of childhood and science fiction; and focuses on questions of pedagogy and the ways that science fiction can reflect the status quo of schooling theory, practice, and policy as well as offer alternative educative possibilities. Additionally, the volume explores connections between children and childhood studies, pedagogy and posthumanism. The various contributors use science fiction as the frame of reference through which conceptual links between inquiry and narrative, grounded in theories of media studies, can be developed.

**Wacky Science** Phil Parratore,2010 Wacky Science helps teachers embark on an extremely exciting adventure--teaching hands-on science in the classroom! Gifted students love science, and they particularly love hands-on science. One of the most exciting things about teaching hands-on science is being able to observe how students gravitate toward these motivating activities and their extraordinary ability to extrapolate additional scientific information from the concepts being taught. People of all ages, backgrounds, and educational abilities love to do science that they can directly touch, hear, observe, smell, and experience. This book contains many high-level, abstract scientific concepts that have been developed into hands-on activities. Including experiments in botany, entomology, paleontology, physics, and zoology, among others, these fun, exciting, and highly motivational activities will have students begging for more.

In this introduction to chemistry for STEM-curious kids ages 9 and up, each chapter of The Book of Ingeniously Daring Chemistry focuses on a single element—its properties, how it was discovered, and even its potential danger level. Easy-to-follow experiments help readers put their newfound knowledge into action. All that's needed is a sense of adventure and some items from around the house. Make your own fossil with silicon. Use a pinhead and measure 166 feet of string for a mind-boggling insight into how a hydrogen atom is built. Discover oxygen and oxygenation by slicing an apple and seeing what happens an hour later. Harness the power of zinc with a potato clock. And enjoy a special hands-off feature about the “Dirty Dozen”—those nasty elements, from arsenic to plutonium, that can wreak havoc wherever they appear (there are no experiments using these chemicals). Matter really matters, and now you'll really understand why.
