**From Shield to Storm** James F. Dunnigan, Austin Bay, 2001-05-29 From Shield to Storm is a book by two experts but is not a book for the experts, though given the dismal performance of many pre-war expert military analysts some of them could stand to read it. When it comes to military history and military affairs, there are always plenty of books for and by the experts. But the rest of the world, those who foot the bill for vast military establishments and the think tanks (or universities) which employ the experts, are often left puzzling out acronyms, dense jargon and thicker prose of the experts' tomes. Rich in detail and observation, From Shield to Storm is sprightly and at times, necessarily irreverent. From Shield to Storm contains easy to read details on the combat units involved, how they were organized, their weapons and equipment, how they fought and how they managed to obtain such a lopsided victory. Similar details are also provided for the Iraqis. Political, social and historical background is also provided.

Marijuana Hydroponics contains equipment lists, diagrams, and a step-by-step account of assembly of a system of nutrient solutions in controlled environments for a high-yield water-culture growing system. This book give information on lighting for growth and budding, mineral nutrients, nutrient flow technique, water culture, atmosphere control, temperature factors, vegetative and reproductive growth, harvesting, using rock wool as a medium,

and curing of hydroponics crops.

**High Tech Trash** Elizabeth Grossman, 2006-05-06 The Digital Age was expected to usher in an era of clean production, an alternative to smokestack industries and their pollutants. But as environmental journalist Elizabeth Grossman reveals in this penetrating analysis of high tech manufacture and disposal, digital may be sleek, but it's anything but clean. Deep within every electronic device lie toxic materials that make up the bits and bytes, a complex thicket of lead, mercury, cadmium, plastics, and a host of other often harmful ingredients. High Tech Trash is a wake-up call to the importance of the e-waste issue and the health hazards involved. Americans alone own more than two billion pieces of high tech electronics and discard five to seven million tons each year. As a result, electronic waste already makes up more than two-thirds of the heavy metals and 40 percent of the lead found in our landfills. But the problem goes far beyond American shores, most tragically to the cities in China and India where shiploads of discarded electronics arrive daily. There, they are recycled-picked apart by hand, exposing thousands of workers and community residents to toxics. As Grossman notes, This is a story in which we all play a part, whether we know it or not. If you sit at a desk in an office, talk to friends on your cell phone, watch television, listen to music on headphones, are a child in Guangdong, or a native of the Arctic, you are part of this story. The answers lie in changing how we design, manufacture, and dispose of high tech electronics. Europe has led the way in regulating materials used in electronic devices and in e-waste recycling. But in the United States many have yet to recognize the persistent human health and environmental effects of the toxics in high tech devices. If Silent Spring brought national attention to the dangers of DDT and other pesticides,

High Tech Trash could do the same for a new generation of technology's products.

**Storm Surge** Chris Everheart,2019-08-08 Emmi, Jay and Ryker are rock-climbing in the mountains when a storm hits, ruining their field trip. As they descend Seaside Peak, Hazmat radios from base, delivering some bad news -- national security is at risk! A Navy submarine is unable to upload top-secret data because the storm has knocked down the antenna on Seaside Peak. With the window of opportunity for the transmission running out, team Recon will have to find a way to get to the antenna soon!

*Silicon Valley and the Environmental Inequalities of High-Tech Urbanism* Jason A. Heppler,2024-04-23 In the half century after World War II, California's Santa Clara Valley transformed from a rolling landscape of fields and orchards into the nation's most consequential high-tech industrial corridor. How Santa Clara

Valley became Silicon Valley and came to embody both the triumphs and the failures of a new vision of the American West is the question Jason A. Heppler explores in this book. A revealing look at the significance of nature in social, cultural, and economic conceptions of place, the book is also a case study on the origins of American environmentalism and debates about urban and suburban sustainability. Between 1950 and 1990, business and community leaders pursued a new vision of the landscape stretching from Palo Alto to San Jose—a vision that melded the bucolic naturalism of orchards, pleasant weather, and green spaces with the metropolitan promise of modern industry, government-funded research, and technology. Heppler describes the success of a new, clean, future-facing economy, coupled with a pleasant, green environment, in drawing people to Silicon Valley. And in this overwhelming success, he also locates the rapidly emerging faults created by competing ideas about forming these idyllic communities—specifically, widespread environmental degradation and increasing social stratification. Cities organized around high-tech industries, suburban growth, and urban expansion were, as Heppler shows, crucibles for empowering elites, worsening human health, and spreading pollution. What do “nature” and “place” mean, and who gets to define these terms? Key to Heppler’s work is the idea that these questions reflect and determine what, and who, matters in any conversation about the environment. *Silicon Valley and the Environmental Inequalities of High-Tech Urbanism* vividly traces that idea through the linked histories of Silicon Valley and environmentalism in the West.

The Diversity, Complexity, and Evolution of High Tech Capitalism Sten A. Thore, 2012-12-06 In his book *Jurassic Park* (and in the movie based on the book), Michael Crichton describes a crazed professor who

through techniques of genetic engineering manages to recreate the dinosaurs and giant ferns of 65 million years past. Once the giant Tyrannosaurus Rex is brought to life, a powerful dynamics sets in: evolution. The prehistoric world embarks on a collision course with man. Researching his book, Crichton had been reading up on paleontology and on the mathematical theory of evolution, catastrophes, and chaos. Crichton explains some of the twists of nonlinear mathematics that are rewriting not only thermodynamics, physics, and chemistry (that all grapple with evolving and turbulent processes) but also paleontology, genetics, medicine and even anthropology. Collapse and chaos is not limited to prehistoric animal kingdoms and ancient civilizations. The collapse of the Soviet Union and the political and economic chaos in its aftermath demonstrate that modern civilizations are just as vulnerable. This book aims at reexamining some main portions of the discipline of economics from the point of view of economic change and creativity. There are two aspects to this perspective. First, diversity and complexity. The range of different kinds of high technology products available to consumers and producers increases rapidly. Each product is the result of a long and complex production hierarchy. As these hierarchies grow, they deliver ever more diversified and complex high tech goods. Other hierarchies fall by the wayside.

The Black Imagination, Science Fiction and the Speculative Sandra Jackson, Julie Moody Freeman, 2013-10-18 This book expands the discourse as well as the nature of critical commentary on science fiction, speculative fiction and futurism – literary and cinematic by Black writers. The range of topics include the following: black superheroes; issues and themes in selected works by Octavia Butler; selected work of Nalo Hopkinson; the utopian and dystopian impulse in the work of W.E. B. Du Bois and

George Schuyler; Derrick Bell's Space Traders; the Star Trek Franchise; female protagonists through the lens of race and gender in the Alien and Predator film franchises; science fiction in the Caribbean Diaspora; commentary on select African films regarding near-future narratives; as well as a science fiction/speculative literature writer's discussion of why she writes and how. This book was published as a special issue of *African Identities: An International Journal*.

Lightning Storm Patrick Kirk, 2020-01-08 Over the last twenty years of the 20th Century, set in Georgia and primarily in southern California, Patrick Kirk writes a fictional account of the lives of Bryan and Carolyn Jenkins as they traverse the "yuppies gotta have it all" lifestyle. The story is in some ways a high tech suspense thriller; part romance, part spy novel. It is about business, mentorship, career changes and their effects on a marriage and having a family in the 90's. It's also about corporate corruption and greed and how the PC software revolution assisted in the decline in American business values. It's a dissection of the Enron-driven rolling electrical blackouts and the company's ultimate demise. Some of the story lines are imagined after people, places, events and technology encountered by the author during his thirty years in the PC software business.

Cyberstorm Matthew Mather, 2013-10-29 In this prescient thriller about an all-too-possible scenario, a man fights to keep his family alive when a cyberworld meltdown and fierce storms cut New York City off from the world. Mike Mitchell is an average New Yorker living in an apartment in Chelsea, struggling to keep his family together. When the Internet goes down, he suddenly finds himself fighting just to keep

them alive. The electricity and power supplies fade in and out, and the explanations offered by the authorities are vague and untrustworthy. A string of increasingly bizarre disasters starts appearing on the world's news networks, and a monster snowstorm hits New York City before Christmas. Mike and his close friends and family hunker down in their apartment building for safety, organizing and rationing food and water. Outside, the boundaries between lawful and criminal behaviour break down as resources become scarce. With the threat to their safety growing, Mike and his family pin their hopes on fleeing the city for the countryside. But as the world and cyberworld come crashing down, New York is suddenly cut off, turning the city into a wintry tomb where nothing is what it seems, and where no one can be trusted . . .
