Political Conservatism and Religious Reformation in Iran (1905-1979) Amir Yahya

Ayatollahi, 2022-03-19 This book is a theoretical inquiry on the relation of the body politic with the religious movements in the time between the Constitutional Revolution and the Islamic Revolution in Iran; it illustrates speculative and historical analyses on the relationship of state, religion, and socio-political status in the late Qajar dynasty (1905-1925) and the whole Pahlavi monarchy. Particularly, it examines the applicability of “liberal conservatism” to the era of the last Shah of Iran. The thesis

defines the term political conservatism in accord with Edmund Burke's philosophy. It deals next with the definition of religious reformation, the peculiar characteristics of Islam, the Shi'ite political theology, and the contradictory usages of "Islamic reformation" in the literature. The text gives an overview of the two antagonist sides of nationalism. It provides also an analysis of the Islamic Republic as a new political phenomenon in Iranian history and the transformation of all concepts after 1979. Ayatollahi aims to assess the Iranian conservatism, the possibility of conciliation between politics and religion before the collapse of the Pahlavi, and "the conditions of possibility" for any restoration of the monarchy.

Goldoon and Professor Bahman Shahzadi, Jacqueline Buckman Shahzadi, 2003 A stash of historic letters is the starting point for this intimate view of life in pre-Revolutionary Iran. The authors, Jackie and Bahman Shahzadi, use excerpts of their old letters to peer into the past and examine the relationship that became a 35-year marriage. For young, American-born Jackie, the challenges of adapting to life in Iran were complicated by marrying into Zoroastrianism, a religion forbidding both conversion and interfaith marriage. Their life in Iran spans the political life of the Shah from coronation to overthrow. This conversational narrative chronicles the effects of these outside influences on this

bicultural union, including, ultimately, exile from Iran in the midst of the Revolution.

**The Iran National Front and the Struggle for Democracy** Masoud Kazemzadeh, 2022-05-09 The Iran National Front and the Struggle for Democracy: 1949–Present explores the activities of the Iran National Front (INF). The INF is a coalition of parties, groups, and individuals and Iran's oldest and main pro-democracy political party. This book presents a political history of the INF from 1949 to the present day. It discusses the current platform of the INF, its leadership, policies, strategies, as well as criticisms and weaknesses. The volume draws on a rich range of primary sources, INF documents, and interviews, including translated transcripts with the top leader of the INF. As it is one of the major political parties opposing the current regime in Iran, the book also examines the current situation in the country. It provides an analysis of the nature of the political systems under the Shah and the Islamic Republic.

Big Data Platforms and Applications Florin Pop,Gabriel Neagu,2021-09-28 This book provides a review of advanced topics relating to the theory, research, analysis and implementation in the context of big data platforms and their applications, with a focus on methods, techniques, and performance evaluation. The explosive growth in the volume, speed, and variety of data being produced every day requires a continuous increase in the processing speeds of servers and of entire network infrastructures, as well as new resource management models. This poses significant challenges (and provides striking development opportunities) for data intensive and high-performance computing, i.e., how to efficiently turn extremely large datasets into valuable information and meaningful knowledge. The task of context data management is further complicated by the variety of sources such data derives from, resulting in different data formats, with varying storage, transformation, delivery, and archiving requirements. At the same time rapid responses are needed for real-time applications. With

the emergence of cloud infrastructures, achieving highly scalable data management in such contexts is a critical problem, as the overall application performance is highly dependent on the properties of the data management service.

**Iran at War** Kaveh Farrokh, 2011-12-20 Following on from his award-winning book on the history of ancient Persia, Kaveh Farrokh goes on to examine Iran's wartime history from the Safavid dynasty of the 16th and 17th century through to the 1979 Revolution and beyond. He shows how the early military successes were followed by centuries of defeat as the external influences of nations like Russia and Britain began to shape the internal history of Iran, before unraveling the complex, violent 20th century military history of the country, which encompasses two world wars, regional movements, foreign intervention, anti-government revolts, conflicts on the Soviet border, a revolution and an eight-year war with Iraq. Illustrated with contemporary illustrations and photographs this book provides an unparalleled investigation into the bloody martial history of Iran.

**Wavelets** Amir-Homayoon Najmi, 2012-04-15 Introduced nearly three decades ago as a variable resolution alternative to the Fourier transform, a wavelet is a short oscillatory waveform for analysis of transients. The discrete wavelet transform has remarkable multi-resolution and energy-compaction properties. Amir-Homayoon Najmi's introduction to wavelet theory explains this mathematical concept clearly and succinctly. Wavelets are used in processing digital signals and imagery from myriad sources. They form the backbone of the JPEG2000 compression standard, and the Federal Bureau of Investigation uses biorthogonal wavelets to compress and store its vast database of fingerprints. Najmi provides the mathematics that demonstrate how wavelets work, describes how to construct them, and discusses their importance as a tool to investigate and process signals and imagery. He reviews key concepts such as frames, localizing transforms, orthogonal and biorthogonal bases, and multi-resolution. His examples include the Haar, the Shannon, and the Daubechies families of orthogonal

and biorthogonal wavelets. Our capacity and need for collecting and transmitting digital data is increasing at an astonishing rate. So too is the importance of wavelets to anyone working with and analyzing digital data. Najmi's primer will be an indispensable resource for those in computer science, the physical sciences, applied mathematics, and engineering who wish to obtain an in-depth understanding and working knowledge of this fascinating and evolving field.

**Endurance Time Excitation Functions** Homayoon E. Estekanchi, Mohammadreza

Mashayekhi, Hassan A. Vafai, 2022-11-30 Seismic assessment and earthquake-resistant design are essential applications of earthquake engineering for achieving seismic safety for buildings, bridges, infrastructure, and many other components of the built environment. The Endurance Time Method (ETM) is used for seismic analysis of simple and complex structural systems and civil engineering infrastructure as well as producing optimal and cost-effective structural and detail designs. ETM is a relatively new approach to seismic assessment and design of structures. It has developed into a versatile tool in the field, and its practical applications are expected to increase greatly in the near

future.

*Progress In Handwriting Recognition* Sebastiano Impedovo, Andrew C Downton, 1997-07-04

Handwriting Recognition has become a very important research area which is attracting more and more scientists. In fact, the extraordinary advances in the field of data acquisition technology and the promising results of the research, nowadays make possible the development of commercial systems for processing and recognition of handwritten documents. This book contains the results of the activity of the most important academic and industrial research groups working in this area. The new issues arising in the field are focused and involve both theoretical and practical aspects related to handwriting recognition and document processing systems. The contributions of eminent experts point out the more interesting challenges for the scientific community ranging from acquisition and preprocessing of handwritten documents, to recognition of handwritten digits and words, to the design of multi-expert systems and the exploitation of the contextual knowledge to improve system performance.
