O'Keeffe and Stieglitz Benita Eisler,1991 Almost 24 years his junior, Georgia O'Keeffe became for Alfred Stieglitz a near icon of American art--as well as his wife. In a marvelous, multileveled biography, Benita Eisler traces the epic and stormy relationship of these incomparable artists, from their consuming ambition to their sexual experimentation.

Unveiling India Anees Jung,2000-10-14 The women in this book are not extraordinary or famous, and yet their stories and testimonies, narrated here by one of India's best-known women journalists, provide a passionate, often deeply touching, revelation of what it means to be a woman in India today. The women tell of marriage and widowhood, unfair work practices, sexual servitude, the problems of bearing and rearing children in poverty, religion, discrimination, other forms of exploitation ... Yet they also talk of fulfilling relationships, the joys of marriage and children, the exhilaration of breaking free from the bonds of tradition, ritual, caste, religion ... Interwoven with all this is the story of one woman's journey--of how Anees Jung, the author, brought up in purdah, succeeded in shaking off the restricting influences of her traditional upbringing to become a highly successful, independent career woman, still a comparatively rare phenomenon in India. As such, the book is essential reading for anyone wishing to understand the women of India--the silent majority that is now beginning to make itself heard.

Making Silent Stones Speak Kathy D. Schick,Nicholas Patrick Toth,1994-02-03 In this dramatic reconstruction of the daily lives of the earliest tool-making humans, two leading anthropologists reveal how the first technologies-- stone, wood, and bone tools-- forever changed the course of human evolution. Drawing on two decades of fieldwork around the world, authors Kathy Schick and Nicholas Toth take readers on an eye-opening journey into humankind's distant past-- traveling from the savannahs of East Africa to the plains of northern China and the mountains of New Guinea-- offering a behind-the-scenes look at the discovery, excavation, and interpretation of early prehistoric sites. Based on the authors' unique mix of archaeology and practical experiments, ranging from making their own stone tools to theorizing about the origins of human intelligence, *Making Silent Stones Speak* brings the latest ideas about human evolution to life.

Sacred Clowns Tony Hillerman, 1993 During a Tano kachina ceremony, something in the antics of the dancing koshare, a sacred clown, fills the air with tension. Moments later, the clown is found brutally bludgeoned -- in the same manner that a reservation schoolteacher was killed just days before. In true Navajo style, Officer Jim Chee and Lieutenant Leaphorn of the Tribal Police go back to the beginning to decipher the sacred clown's message to the people of the Tano pueblo. Amid guarded tribal secrets and crooked Indian traders, they find a trail of blood that links a runaway schoolboy, two dead bodies, and the mysterious presence of a sacred artifact.

What the Bones Tell Us Jeffrey H. Schwartz, 1993 Jeffrey Schwartz, professor of physical anthropology at the University of Pittsburgh and research associate at the American Museum of Natural History, ranges from digs in the Negev Desert through Africa and Europe to the local coroner's office to explain how interpretations of the past are made. What counts is the data and the context in which the evidence is analyzed. Along the way the author constructs a new hominid family tree to take account of recent assessments of human evolution. The author, part of the team that recently unearthed burial urns from the ancient city of Carthage, exposes the inner workings of archeology and anthropology, illustrating what can be learned from fossils and fragments of ancient cultures and civilizations. Because every living thing on earth will have had a single, unique history, whether it be the life of an individual, of a civilization, a species, or a diverse evolutionary group, the discovery, writes the author, is less a matter of unearthing a fossil or sequencing a species' DNA than it is of interpreting data in an attempt to reconstruct the missing pieces of the puzzle. Bone fragments can be used not only to identify animal species but also to tell us of their past history. Studies of bones can also reveal the land's past capacity to sustain animal life, whether domestic or wild. Frequently the physical evidence overturns sacred historical writings (and occasionally such evidence is suppressed). And when the author misidentifies what turns out to be an incomplete human specimen for the coroner, we come to understand just how easily incomplete data can deceive us. After reading this fascinating and authoritative work, any reader will be better equipped to evaluate the evidence for various new theories about our origins and evolution. Another value of this pioneering book is its deep insight into scientific infighting and the competing speculations about evolutionary history. Scientists, however worldly, discover little truths - at best useful models of the past (good until some better data come along). Their theories, and the bases for them, must be accessible to others for scrutiny and possible rejection; that's the essence of the scientific method and this enormously thoughtful work.
