Taking Shelter from the Storm Texas Tech University. Wind Engineering Research Center,2004

Taking Shelter From the Storm U. S. Department Security,Federal Emergency Agency,2013-02 Every year, tornadoes, hurricanes, and other extreme windstorms injure and kill people, and cause millions of dollars' worth of property damage in the United States. Even so, more and more people build homes in tornado- and hurricane-prone areas, possibly putting themselves into the path of such storms. Having a safe room built for your home or small business can help provide near-absolute protection for you and your family or employees from injury or death caused by the dangerous forces of extreme winds. Near absolute protection means that, based on our current knowledge of tornadoes and hurricanes, the occupants of a safe room built according to this guidance will have a very

high probability of being protected from injury or death. Our knowledge of tornadoes and hurricanes is based on substantial meteorological records as well as extensive investigations of damage to buildings from extreme winds. It can also relieve some of the anxiety created by the threat of an oncoming tornado or hurricane. All information contained in this publication is applicable to safe rooms for use in homes as well as in small businesses. Should you consider building a safe room in your home or small business to provide near absolute protection for you, your family, or employees during a tornado or hurricane? The answer depends on your answers to many questions, including: Do you live in a high-risk area? How quickly can you reach safe shelter during extreme winds? What level of safety do you want to provide? What is the cost of a safe room? This publication will help you answer these and other questions so you can decide how best to provide near-absolute protection for you and your family or employees. It includes the results of research that has been underway for more than 30 years, by Texas Tech University's Wind Science and Engineering (WISE; formerly known as the Wind Engineering Research Center or WERC) Research Center and other wind engineering research facilities, on the effects of extreme winds on buildings. This publication provides safe room designs that will show you and your builder/contractor how to construct a safe room for your home or small business. Design options include safe rooms located underneath, in the basement, in the garage, or in an interior room of a new home or small business. Other options also provide guidance on how to modify an existing home or small business to add a safe room in one of these areas. These safe rooms are designed to provide near-absolute protection for you, your family, or employees from the extreme winds expected during tornadoes and hurricanes and from flying debris, such as wood studs, that tornadoes and hurricanes usually create. In August 2008, the International Code Council (ICC), with the support of the National Storm Shelter Association (NSSA), released a consensus standard on the design and construction of storm shelters. This standard, the ICC/NSSA Standard for the Design and Construction of Storm Shelters (ICC-500), codifies much of the extreme-wind shelter recommendations of the early editions of FEMA 320 and FEMA 361, Design and Construction Guidance for Community Safe Rooms (first edition, July 2000). FEMA 361 contains detailed guidance for the design and construction of community safe rooms, which also provide near-absolute protection, the level of protection provided in the residential safe rooms of this publication. It is important that those involved in the design, construction, and maintenance of storm shelters be knowledgeable of both FEMA guidance and ICC standards that pertain to sheltering from extreme winds. The safe room designs presented in this publication meet or exceed all tornado and hurricane design criteria of the ICC-500 for both the tornado and hurricane hazards. The safe rooms in this publication have been designed with life safety as the primary consideration.

It includes the results of research that has been underway for more than 20 years, by Texas Tech University's Wind Engineering Research Center (WERC) and other wind engineering research facilities, on the effects of extreme winds on buildings. The guide also provides shelter designs that will show you and your builder/contractor how to construct a shelter underneath a new house, in the basement of a new house, or in an interior room of a new house, or how to modify an existing house to add a shelter in one of these areas. These shelters are designed to protect you and your family from the high winds expected during tornadoes and hurricanes and from flying debris, such as wood studs, that tornadoes and hurricanes usually create. The National Association of Home Builders (NAHB) Research Center has evaluated these designs for construction methods, materials, and costs. Engineers at Texas Tech University have confirmed the design requirements for the expected forces from wind pressure and the impact of typical flying debris. The shelters are designed with life safety as the primary consideration.

**Severe Storm Engineering for Structural Design** Michele G. Melaragno, 1996 Building codes and standards in other countries are studied in correlation to the number of casualties suffered during a violent storm. Specifically, Bangladesh is offered as a case study of minimum standards of building construction, while Australia is highlighted for having some of the strictest controls in the world. In 1990 and 1991, hurricanes Hugo, Andrew and Iniki pummeled the United States leveling residences, office buildings, a military base, and shopping areas. The devastation had a profound effect on the local communities, industries and commerce. Judging from the destruction these storms caused to the buildings in the area, it is clear that we still have a great deal to learn about designing structures to withstand hurricanes, typhoons and tornadoes. This book, for both the student and practicing architect or engineer, explores wind velocity typical of storms such as these. The weather conditions are then translated into actual forces on a structure to be used to better design build

**The Wind Engineers** Jeff Klinkenberg, University of Florida, 2015-10-28 The University of Florida has an ambitious goal: to harness the power of its faculty, staff, students, and alumni to solve some of society's most pressing problems and to become a resource for the state of Florida, the nation, and the world. Hurricanes and tornadoes--and the devastation they leave in their wake--are feared across the globe, but at the University of Florida these

natural phenomena are a fascinating research opportunity. At UF's Engineering School of Sustainable Infrastructure and Environment, wind engineers like Forrest Masters and David Prevatt study storm systems and design buildings to better withstand the forces of nature. Follow their stories as they venture inside Hurricane Wilma with wind gauges, travel to Joplin, Missouri to assess the wind-damage from the most powerful tornado in more than a half century, and conduct experiments with the lab's infamous Multi-Axis Wind Load Simulator, ominously nicknamed The Judge. Yet the job of the UF wind engineers does not end there. They take their findings to the drafting table, build roofs and walls, and test shingles, shutters, and garage doors. Their goal: to make sure our houses are still standing, and we are safe, after the storm. The stories chronicled in GATORBYTES span all colleges and units across the UF campus. They detail the far-reaching impact of UF's research, technologies, and innovations--and the UF faculty members dedicated to them. Gatorbytes describe how UF is continuing to build on its strengths and extend the reach of its efforts so that it can help even more people in even more places.

**Building Storm** Gwyn McNamee, 2018-12-20 She hasn't been living. He's looking for a way to forget it all. My life went up in flames. All I'm left with is my daughter and ashes. The simple act of breathing is so excruciating, there are days I wish I could stop altogether. So I have no business being at the party, and I definitely shouldn't be in the arms of the handsome stranger. When his lips meet mine, he breathes life into me for the first time since the day the inferno disintegrated my world. But loving again isn't in the cards, and there are even greater dangers to face than trying to keep Landon McCabe out of my heart. Running is my only option. I have to get away from Chicago and the betrayal that shattered my world. I need a new life-one without attachments. The vibrancy of New Orleans convinces me it's possible to start over. Yet in all the excitement of a new city, it's Storm Hawke's dark, sad beauty that draws me in. She isn't looking for love, and we both need a hot, sweaty release without feelings getting involved. But even the best laid plans fail, and life can leave you burned. Love can build, and love can destroy. But in the end, love is what raises you from the ashes. *Regenerative Leadership* Giles Hutchins, 2019-07-16 This book by leadership and sustainability experts Giles Hutchins and Laura Storm provides an exciting and comprehensive framework for building regenerative life-affirming businesses. It offers a multitude of business cases, fascinating examples from nature's living systems, insights from the front-line pioneers and tools and techniques for leaders to succeed and thrive in the 21st century. Regenerative Leadership draws inspiration from pioneering thinking within biomimicry, circular economy, adult developmental psychology, anthropology, biophilia, sociology, complexity theory and next-stage leadership development. It connects the dots between these fields through a powerful framework that enables leadership to become regenerative: in harmony with life, building thriving, prosperous organizations amid transformational times. The book is a combination of theoretical frameworks, case studies, tools & practices: Everything the leader needs to be successful in the 21st century. Regenerative Leadership - what's it all about? While the future is uncertain, we clearly see an upward trend towards sustainable conscious business. And this is more than just a trend - we're witnessing a new kind of organization emerging. An organization which is able to rapidly sense and respond to the ever-changing business climate by innovating how and

why it creates and delivers value, and the way it engages internally and externally with its ecosystem of employees, customers, suppliers, resources, investors, society and environment. This new kind of organization is the organization-as-living-system that is designed on the Logic of Life: life-affirming businesses that thrive from the inside out, by cultivating conditions conducive for life, internally and externally. These organizations nurture flourishing cultures while focusing on products and services that enhance society and the environment. Regenerative organizations will be tomorrow's success stories.

About This Book Learn to use Apache Storm and the Python Petrel library to build distributed applications that process large streams of data Explore sample applications in real-time and analyze them in the popular NoSQL databases MongoDB and Redis Discover how to apply software development best practices to improve performance, productivity, and quality in your Storm projects Who This Book Is For This book is intended for Python developers who want to benefit from Storm's real-time data processing capabilities. If you are new to Python, you'll benefit from the attention to key supporting tools and techniques such as automated testing, virtual environments, and logging. If you're an experienced Python developer, you'll appreciate the thorough and detailed examples What You Will Learn Install Storm and learn about the prerequisites Get to know the components of a Storm topology and how to control the flow of data between them Ingest Twitter data directly into Storm Use Storm with MongoDB and Redis Build topologies and run them in Storm Use an interactive graphical debugger to debug your topology as it's running in Storm Test your topology components outside of Storm Configure your topology using YAML In Detail Big data is a trending concept that everyone wants to learn about. With its ability to process all kinds of data in real time, Storm is an important addition to your big data “bag of tricks.” At the same time, Python is one of the fastest-growing programming languages today. It has become a top choice for both data science and everyday application development. Together, Storm and Python enable you to build and deploy real-time big data applications quickly and easily. You will begin with some basic command tutorials to set up storm and learn about its configurations in detail. You will then go through the requirement scenarios to create a Storm cluster. Next, you'll be provided with an overview of Petrel, followed by an example of Twitter topology and persistence using Redis and MongoDB. Finally, you will build a production-quality Storm topology using development best practices. Style and approach This book takes an easy-to-follow and a practical approach to help you understand all the concepts related to Storm and Python.
